With a wealth of helpful guidelines and assessment tools, *Nursing Pathways for Patient Safety* makes it easy to identify the causes of practice breakdowns and to reduce health care errors. It provides expert guidance from the National Council of State Boards of Nursing (NCSBN), plus an overview of the TERCAP® assessment tool. The book systematically examines the causes of practice breakdowns resulting from practice styles, health care environments, teamwork, and structural systems to promote patient safety. An overview of the NCSBN Practice Breakdown Initiative introduces the TERCAP® assessment tool and provides a helpful framework for understanding the scope of problems, along with NCSBN's approach to addressing them. Coverage of each type of practice breakdown systematically explores errors in areas such as clinical reasoning or judgment, prevention, and intervention. Case Studies provide real-life examples of practice breakdowns and help you learn to identify problems and propose solutions. Chapters on mandatory reporting and implementation of a whole systems approach offer practical information on understanding TERCAP® and implementing a whole systems approach to preventing practice breakdowns.

When you understand the whys of each step the nursing process, it's easier to understand how to apply them in the real world in which you will practice. Take an interactive, step-by-step approach to developing the diagnostic reasoning and problem-solving skills you need

to think like a nurse with the resources you'll find in this unique workbook style text.

C. Amting Directorate General Information Society, European Commission, Brussels th Under the 4 Framework of European Research, the European Systems and Soft ware Initiative (ESSI) was part of the ESPRIT Programme. This initiative funded more than 470 projects in the area of software and system process improvements. The majority of these projects were process improvement experiments carrying out and taking up new development processes, methods and technology within the software development process of a company. In addition, nodes (centres of exper tise), European networks (organisations managing local activities), training and dissemination actions complemented the process improvement experiments. ESSI aimed at improving the software development capabilities of European enterprises. It focused on best practice and helped European companies to develop world class skills and associated technologies to build the increasingly complex and varied systems needed to compete in the marketplace. The dissemination activities were designed to build a forum, at European level, to exchange information and knowledge gained within process improvement ex per iments. Their major objective was to spread the message and the results of experiments to a wider audience, through a variety of different channels. The European Experience Exchange (tUR~X) project has been one of these dissemination activities within the European Systems and Software Initiative.~UR~X has collected the results of

practitioner reports from numerous workshops in Europe and presents, in this series of books, the results of Best Practice achievements in European Companies over the last few years.
