Under the cultural turn and transformation the new intellectual discourses started in the 21st century to search the roots, have cross-cultural comparison and to see how the old traditions be used in the contemporary worldviews. This

book is the first attempt dealing with roots of Indian geographical thoughts since its beginning in 1920. It emphasises identity of India and Indianness and consciousness among dweller geographers in India, development and status of geography and its recent trends, Gaia theory and Indian context in search of cosmic integrity, ecospirituality and global message towards interrelatedness, Hindu pilgrimages and its contemporary importance, Mahatma Gandhi and his contribution to sustainable environmental development for global peace and humanism, and new vision to see

meeting grounds of the East and the West on the line of reconstruction and reconciliation in the globalising world. These essays are selective and thematic, therefore overall view of comprehensiveness is lacking. But this book is not the end; obviously it is a beginning as already other volumes in sequence and continuity are in progress. At the end, the lead essays, representative of the three eras, by Spate (1956), Sopher (1973), and Mukerji (1992) are reprinted with a view to assessing the relevance of their challenging message even today. This book discusses the nature

and process of change in human society over the past two million years. The author draws on economic, historical and biological concepts to examine the driving forces of change and looks to likely developments in the future. This analysis produces some very thought-provoking and controversial conclusions. From green-lifestyle mavens who endorse products on social media to natural health activists sponsored by organic food companies, the marketplace for advice about how to live life naturally is better stocked than ever. Where did the curious idea of buying one's way to

sustainability come from? In no small part, as Andrew Case shows, the answer lies in the story of entrepreneur and reformer J. I. Rodale, his son Robert Rodale, and their company, the Rodale Press. These pioneers of organic gardening were also pioneers in cultivating a niche for natural health products in the 1950s, organizing the emerging marketplace for organic foods in the 1960s, and publishing an endless supply of advice books on diet and health in the process. Rodale's marketplace environmentalism brought environmentally minded consumers together and taught

Americans how to grow food, eat, and live in more environmentally friendly ways. Yet the marketplace has proved more effective at addressing individual health concerns than creating public health interventions. It is as liable to champion untested and ineffectual health supplements as it is to challenge the indiscriminant use of dangerous pesticides. For anyone trying to make sense of the complex tensions between business profits and the desire for environmental reform, ♦The Organic Profit♦is essential reading.

The social and natural sciences have more in common than most people would perhaps suspect. This thought-provoking study, the first of its kind ever attempted, presents a single straightforward structure which unites the latest scientific views on the history of the Universe, the Solar System, Earth, life and humankind. It contributes to a better understanding of some long-standing academic controversies, such as the root causes for the origins of humankind, the rise of agriculture and the emergence of early states.

Interest in exoplanets--the worlds of other stars--is not new. From the late 17th century until the end of the 19th, almost all educated people believed that the stars are suns surrounded by inhabited planets--a belief that was expressed not in science fiction, but in serious speculation, both scientific and religious, as well as in poetry. Only during the first half of the 20th century was it thought that life-bearing exoplanets are rare. This is not a science book--rather, it belongs to the category known as History of Ideas. First published by Atheneum in

Acces PDF Planet Organic Organic Living

1974, it tells the story of the rise, fall, and eventual renewal of widespread conviction that we are not alone in the universe. In this 2012 updated edition the chapters dealing with modern speculation have been revised to reflect the progress science has made during the past 40 years, including the actual detection of planets orbiting other stars. However, it is not intended to be more than a brief introduction to today's views; its focus is on little-known facts about those of the past. Why should we care what our forebears believed? Now, the question of ET life is a matter

for investigation by science. Yet it's significant that most educated people of past centuries were convinced that other inhabited worlds exist, without any scientific evidence whatsoever. This historical fact reveals that human beings have an instinctive sense of kinship with the wider universe and a desire to see the realms that lie beyond this one small planet--and perhaps, eventually, to go there. Our ancestors conceived of such voyages only in a spiritual sense, as occurring after death. But we who have taken our first small steps into space are aware that our

descendants may set foot on the worlds of other suns. Just as in the 17th century people were initially upset by the new knowledge that the stars are suns scattered in space rather than lights fixed to a nearby sphere, the growing awareness that Earth is not safely isolated from whatever lies beyond makes many of our contemporaries uneasy. Thus today's predominant feelings about spaceships are ambivalent. Nevertheless, if an impulse toward belief that we are not alone in the universe is indeed an innate characteristic of human beings, as the past spread of

belief in inhabited exoplanets suggests, we can be sure that those who follow us will not turn back from becoming spacefarers.

From the Forward by Tom Berry: Lorna Green proposes that we reestablish that primordial intimacy between humans and the natural world, an intimacy with all living creatures and all physical phenomena that constitute the living organism: The Earth. Every power in the universe is needed if humans are to survive with any degree of fulfillment. The powers that govern the world include vast powers beyond the Earth.

Acces PDF Planet Organic Organic Living

These are spiritual as well as physical forces. We need to recover this intimacy with all our relations. There are the voices also that modern man now seldom hears, voices of the winds, of the mountains and rivers, the voices of the woodlands and the meadows and all the living creatures that inhabit the land and the sea and fly through the air. If they had, they would surely have responded with the awe and reverence that the peoples of the Earth have known from Paleolithic times. Lorna Green has articulated the nature of the challenge that we confront and has given

us a way of responding to the challenge. Her response comes from her own lifetime experience of extensive study, meditation and living with the land. She has heard the voices Lorna Green is someone to be listened to.
