This study provides the most accurate and comprehensive examination of participation trends to date. We analyze data from almost every higher education institution in the country and utilize data and methods that are free of the shortcomings present in previous research on this subject. A 10-year NCAA sample containing 738 NCAA colleges and universities is examined over the 1995-96 to 2004-05 period. In addition, a complete four-year sample containing 1,895 higher education institutions is examined

over the 2001-02 to 2004-05 period. Appended are: (1) Comparison with Alternative Reports; (2) Sample Overview and Data Corrections; (3) Cross Country and Track and Field; and (4) Title IX and Athletics. (Contains 15 tables and 5 figures.). Although girls and women account for approximately 40 percent of all athletes in the United States, they receive only 4 percent of the total sport media coverage. SportsCenter, ESPN's flagship program, dedicates less than 2 percent of its airtime to women. Local news networks devote less than 5 percent of their programming to women's sports. Excluding Sports Illustrated's annual "Swimsuit Issue," women appear on just 4.9 percent of the

magazine's covers. Media is a powerful indication of the culture surrounding sport in the United States. Why are women underrepresented in sports media? Sports Illustrated journalist Andy Benoit infamously remarked that women's sports "are not worth watching." Although he later apologized, Benoit's comment points to more general lack of awareness. Consider, for example, the confusion surrounding Title IX, the U.S. Law that prohibits sex discrimination in any educational program that receives federal financial assistance. Is Title IX to blame when administrators drop men's athletic programs? Is it lack of interest or lack of opportunity that causes girls

and women to participate in sport at lower rates than boys and men? In *Women's Sports: What Everyone Needs to Know®*, Jaime Schultz tackles these questions, along with many others, to upend the misunderstandings that plague women's sports. Using historical, contemporary, scholarly, and popular sources, Schultz traces the progress and pitfalls of women's involvement in sport. In the signature question-and-answer format of the *What Everyone Needs to Know®* series, this short and accessible book clarifies misconceptions that dog women's athletics and offers much needed context and history to illuminate the struggles and inequalities

sportswomen continue to face. By exploring issues such as gender, sexuality, sex segregation, the Olympic and Paralympic Games, media coverage, and the sport-health connection, Schultz shows why women's sports are not just worth watching, but worth playing, supporting, and fighting for.

Life Span Motor Development, Seventh Edition With HKPropel Access, is a leading text for helping students examine and understand how interactions of the developing and maturing individual, the environment, and the task being performed bring about changes in a person's movements. This model of constraints approach, combined with an unprecedented collection of video

clips marking motor development milestones, facilitates an unmatched learning experience for the study of motor development across the life span. The seventh edition expands the tradition of making the student's experience with motor development an interactive one. Related online learning tools delivered through HKPropel include more than 190 video clips marking motor development milestones to sharpen observation techniques, with interactive questions and 47 lab activities to facilitate critical thinking and hands-on application. The lab activities may be assigned and tracked by instructors through HKPropel, along with chapter quizzes (assessments) that are

automatically graded to test comprehension of critical concepts. The text also contains several updates to keep pace with the changing field: Content related to physical growth and development of the skeletal, muscle, and adipose systems is reorganized chronologically for a more logical progression. New material on developmental motor learning demonstrates the overlap between the disciplines of motor development and motor learning. New insights into motor competence help explain the relationship between skill development and physical fitness. The text helps students understand how maturational age and chronological age are distinct and

how functional constraints affect motor skill development and learning. It shows how the four components of physical fitness—cardiorespiratory endurance, strength, flexibility, and body composition—interact to affect a person's movements over the life span, and describes how relevant social, cultural, psychosocial, and cognitive influences can affect a person's movements. This edition comes with 148 illustrations, 60 photos, and 25 tables—all in full color—to help explain concepts and to make the text more engaging for students. It also retains helpful learning aids including chapter objectives, a running glossary, key points, sidebars, and application

nuanced examination of the issue, considering not only the physical impacts of youth athletics, but its psychological and social ramifications as well. The eleven original scholarly essays in this collection provide a probing look into how sports—in community athletic leagues, in schools, and even on television—play a major role in how young people view themselves, shape their identities, and imagine their place in society. Rather than focusing exclusively on self-proclaimed jocks, the book considers how the culture of sports affects a wide

variety of children and young people, including those who opt out of athletics. Not only does Child's Play examine disparities across lines of race, class, and gender, it also offers detailed examinations of how various minority populations, from transgender youth to Muslim immigrant girls, have participated in youth sports. Taken together, these essays offer a wide range of approaches to understanding the sociology of youth sports, including data-driven analyses that examine national trends, as well as ethnographic research that gives a voice

describes the wartime circumstances and thinking that form the context for the decision to use these weapons, surveys the major debates related to that decision, and provides a comprehensive collection of key primary source documents that illuminate the behavior of the United States and Japan during the closing days of World War II. Kort opens with a summary of the debate over Hiroshima as it has evolved since 1945. He then provides a historical overview of the events in question, beginning with the decision and program to build the atomic bomb. Detailing the sequence of

Finally, Kort examines ten key issues in the discussion of Hiroshima and guides readers to relevant primary source documents, scholarly books, and articles.

This book explains America's love of sport just as it reveals sport's darker side - the influence of big business, corruption, price gouging, political maneuvering, and media grandstanding.

builds on recently published histories of women as amateur and professional players, umpires, sports commentators and fans to analyze the cultural and historical contexts for excluding females from America's pastime. Drawing on anthropological and feminist perspectives, the book examines the ways that constructions of women's bodies and normative social roles have pushed them toward softball instead of baseball. Sportswriter accounts, Title IX sex-discrimination suits, and interviews with players explore the obstacles and the social isolation of females who join all-male baseball teams, while also discussing policies that inhibit the practice.

In James Citrin's new paradigm-shifting book, he identifies the essential characteristics and disciplines that have led many of our outstanding athletes and other extraordinary performers to achieve equally significant accomplishments in their respective business careers. Citrin uses dozens of compelling interviews with personalities as varied and impressive as Colin Powell, Tony Hawk, Billie Jean King, Magic Johnson, Mia Hamm, and Buzz Aldrin, to name a few, to illustrate a new personal achievement program called the Dynamic Path—a plan that any businessperson can put to immediate use. successes in sports. Women and girls tend to have BFFs, collaborate during periods of stress, express empathy for one another, worry about themselves and others, and desire to have fun in sports, which makes their experiences of sports and competition different from their male counterparts. Female strengths are grounded in both mind and body, and they take these strengths onto the court, field, and track. There are now dozens of studies showing how the female brain and hormones operate quite differently than those of men. This book reveals the ways in which these differences confirm that intense emotions about relationships are part of the sporting life for female competitors. Joan Steidinger uses real stories to show that women and girls compete at very high levels, but also have a different

Are sex and gender really two different things? How malleable is gender identity? Do both gender and sex have to be conceptualized as binaries—as having two distinct but complementary categories? Should we emphasize gender differences, or is that the wrong question? When should we call a gender difference “small”? Are women really “nonaggressive” or does that label stem from stereotyping? How does subtle or “modern” sexism work on its targets? Scholarship on these and other gender-related questions has exploded in recent years. Hilary Lips synthesizes that research for students in an accessible and readable way. Concepts on sex and gender are presented with the social context in

which they were developed. As in previous editions, Lips takes a multicultural approach, discussing the gender experiences of people from a wide range of races, cultures, socioeconomic statuses, and gender and sexual identities. She emphasizes empirical research but takes a critical approach to that research.
