*concerns including complications with effusion, hydrothorax, hemothorax, diaphragm injury, pneumonia, and air embolus. Features more than 180 superb new illustrations, graphs, and tables for easier understanding of complex concepts. Reviews new anticoagulant drugs and their risks and benefits. Provides thoroughly updated content on oncology, endourology, and pediatric surgeries – all areas experiencing tremendous changes since the previous edition.*

*This new edition updates the previous one and adds additional content related to postoperative management, pain management, LGBTQ care, and uroradiology. This book is designed to meet the needs of nurse practitioners, advanced practice nurses globally and physician assistants working in urology. Content assumes some background knowledge regarding the normal anatomy and physiology of the genitourinary system and the pathophysiology underlying specific urologic health-related problems. This ensures that the provider can pursue exemplary management of patients with acute and chronic urologic conditions in a wide variety of settings, including independent practices, and academic urologic practices. This manual fills the gaps that traditional curricula may have left, permitting the reader to proceed with confident management of adult patients with urologic care needs, promoting the role of a skilled clinician in urology, especially for chronic, non-operative urologic conditions while recognizing those conditions which may benefit from surgical management. As the burden of urologic disease increases with an aging U.S. population, it is increasingly clear that nurse practitioners and physician assistants will be called on to move into roles caring for patients with urologic disease. Use of NPs and PAs to their highest education will*

*become an increasingly important strategy for maintaining access and reducing costs, in the context of urologist workforce that is shrinking. However, urology topics receive sporadic attention in NP and PA curricula, leaving practicing NPs and PAs with gaps in their knowledge concerning trends and recommendations for management of urologic health conditions. As this demand for provider visits for urologic concerns increases, the demand for provider services to care for patients with urologic health concerns will also increase, and presents the opportunity for both NPs and PAs to move into specialty practice environments within urology.*
