Prehospital Trauma Life Support Seventh Edition

This brief, practical text covers all aspects of tactical emergency medicine—the practice of emergency medicine in the field, rather than at the hospital, during disasters, police or military conflicts, mass events, and community incidents. Key topics covered include hostage survival, insertion and extraction techniques, continuum of force, medical support, planning and triage, medical evaluation in the incident zone, care in custody, medical control of incident site, decontamination, community communication, and more. Boxed definitions, case scenarios, and

treatment algorithms are included. The concluding chapter presents "real world" scenarios to run tactical teams through and lists recommended training programs and continuing education.

Trauma patients present a unique challenge to anesthesiologists, since they require resource-intensive care, often complicated by pre-existing medical conditions. This fully revised new edition focuses on a broad spectrum of traumatic injuries and the procedures anesthesiologists perform to care for trauma patients perioperatively, surgically, and post-operatively. Special emphasis is given to assessment and treatment of co-existing

disease, including surgical management of trauma patients with head, spine, orthopaedic, cardiac, and burn injuries. Topics such as training for trauma (including use of simulation) and hypothermia in trauma are also covered. Six brand new chapters address pre-hospital and ED trauma management, imaging in trauma, surgical issues in head trauma and in abdominal trauma, anesthesia for oral and maxillofacial trauma, and prevention of injuries. The text is enhanced with numerous tables and 300 illustrations showcasing techniques of airway management, shock resuscitation, echocardiography and use of ultrasound for the performance of regional

fastest and best possible care. Overcrowded emergency rooms cannot care for patients as quickly as necessary, and some may divert ambulances and turn away new patients outright. In many states, ambulance staff lacks the means to determine which hospitals can provide the best care to a patient. Given this absence of knowledge, they bring patients to the closest hospital. In addition, because emergency service providers from different companies compete with each other for patients, and emergency care legislation varies from state to state, it is difficult to establish the necessary local, interstate, and national

communication and collaboration to create a more efficient system. In 2006, the IOM recommended that the federal government implement a regionalized emergency care system to improve cooperation and overcome these challenges. In a regionalized system, local hospitals and EMS providers would coordinate their efforts so that patients would be brought to hospitals based on the hospitals' capacity and expertise to best meet patients' needs. In September 2009, three years after making these recommendations, the IOM held a workshop sponsored by the federal Emergency Care Coordination

Center to assess the nation's progress toward regionalizing emergency care. The workshop brought together policymakers and stakeholders, including nurses, EMS personnel, hospital administrators, and others involved in emergency care. Participants identified successes and shortcomings in previous regionalization efforts; examined the many factors involved in successfully implementing regionalization; and discussed future challenges to regionalizing emergency care. This document summarizes the workshop.

Tactical Medicine Essentials

This handbook was previously distributed as a supplement to the Journal of Special Operations Medicine. The realm of special operations forces (SOF) medicine is a unique and ever-changing one that demands specialized training for our joint SOF. Managing trauma on today's battlefield presents a dynamic array of challenges where limited resources can be rapidly overwhelmed. An austere environment, hostile

gunfire, and delays in casualty evacuation (CASEVAC) are the norms for the special operations medic. The material in this handbook was gleaned from special operations medics operating in the Global War on Terrorism and other operational environments. It should not be viewed as a substitute for the professional training and judgment of special operations medics; rather, it is designed to be a hip-pocket reference on the tactics, techniques, and procedures (TTP) of SOF-relevant tactical combat casualty care. Key Lessons

loss of life occurs before casualties ever reach a military treatment facility (MTF); treatment prior to casualty evacuation is vital. Litter carries are fundamental for good patient care; they prevent further injury and get individuals off target as soon as possible. Rehearse manual carry methods prior to deployment. Every special operations warfighter should carry a tourniquet and be thoroughly familiar with its application. When managing multiple casualties, apply the principles of triage in classifying the priority of treatment and evacuation. Rehearse and employ all of

the mechanics of CASEVAC from the point of injury to the handover at a MTF. This handbook provides a number of considerations when employing medical support to SOF in combat. The challenges are numerous, but the special operations medic must deliver medical care to save Soldiers' lives. The collection of TTP in this handbook will enhance the medic's ability to determine the optimum method to deliver casualty survival assistance.

Emergency Medical Services (EMS) is a critical component of our nation's emergency and trauma care system, providing response

and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times, ambulance diversions, trauma center closures, and ground and air medical crashes. This heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system.

provides the first comprehensive study on this topic. This new book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery, and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns:

- The evolving role of EMS as an integral component of the overall health care system.
- EMS system planning, preparedness, and coordination at the federal, state, and local levels.
- EMS funding and

- EMS workforce trends and professional education.
- EMS research priorities and funding.

Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care specialists. The membership of C-TCCC includes combat medics, corpsmen, and pararescuemen as well as physicians and physician assistants.

The first edition of conflict and catastrophe was produced in 2002 and a second, successful edition, followed in 2009. The decision to produce these works sprung from painful problems experienced by colleagues and authors themselves during many humanitarian and related deployments. The guide for both editions was to provide, in one volume, an entry level text covering all aspects of deployment, with an emphasis on medicine and healthcare in these environments. This third revised, expanded and updated edition of Conflict and Catastrophe Medicine: A Practical Guide follows its successful predecessors in providing a framework

for use by health professionals visiting a resource constrained environment. Encompassing problems brought about by local conflict or natural disasters, the book covers preparation, organisation, logistics, treatment of major trauma and medical emergencies, and the special problems of delivering medicine in a hostile environment. This book comprehensively tackles: Self-preparation of health professionals to face a range of medical and related problems which occur in hostile and remote environments; War and disaster medicine, covering acute management, rehabilitation, reconstruction and prevention; Bridging the fields of medicine, nursing, international relations, history, politics and economics. The book also touches on nutrition, infection, trauma,

Tactical Combat Casualty Care Guidelines 28 October 2013 * All changes to the guidelines made since those published in the 2010 Seventh Edition of the PHTLS Manual are shown in bold text. The most recent changes are shown in red text. *

These recommendations are intended to be guidelines only and are not a substitute for clinical judgment. Basic Management Plan for Care Under Fire

1. Return fire and take cover.
2. Direct or expect casualty to remain engaged as a combatant if appropriate.
3. Direct casualty to move to cover and apply self-aid if able.
4. Try to keep the casualty from sustaining additional wounds.
5. Casualties should be extricated from burning vehicles or buildings and moved to places of

relative safety. Do what is necessary to stop the burning process. 6. Airway management is generally best deferred until the Tactical Field Care phase. 7. Stop life-threatening external hemorrhage if tactically feasible: - Direct casualty to control hemorrhage by self-aid if able. - Use a CoTCCC-recommended tourniquet for hemorrhage that is anatomically amenable to tourniquet application. - Apply the tourniquet proximal to the bleeding site, over the uniform, tighten, and move the casualty to cover.
