Lionel Robbins (1898–1984) is best known to economists for his Essay on the Nature and Significance of Economic Science (1932 and 1935). To the wider public he is well known for the 'Robbins Report' of the 1960s on Higher Education, which recommended a major expansion of university education in Britain. However, throughout his academic career – at Oxford and the London School of Economics in the 1920s, and as Professor of Economics at the School from 1929 to 1961 – he was renowned as an exceptionally gifted teacher. Generations of students remember his lectures for their clarity and comprehensiveness and for his infectious enthusiasm for his

subject. Besides his famous graduate seminar his most important and influential courses at LSE were the Principles of Economic Analysis, which he gave in the 1930s and again in the late 1940s and 1950s, as well as the History of Economic Thought, from 1953 until long after his official retirement. This book publishes for the first time the manuscript notes Robbins used for his lectures on the Principles of Economic Analysis from 1929/30 to 1934/40. At the outset of his career he took the advice of a senior colleague to prepare his lectures by writing them out fully before he presented them; the full notes for most of his pre-war lectures survive and are eminently decipherable. Since he made two major revisions of the lectures in the 1930s the Principles notes show both the development of his own

thought and the way he incorporated the major theoretical innovations made by younger economists at LSE, such as John Hicks and Nicholas Kaldor, or elsewhere, notably Joan Robinson. He intended to turn his lecture notes into a book, abandoning the project only when he was asked to chair the Committee on Higher Education in 1960. This volume is not exactly the book he wanted to write, but it is a unique record of what was taught to senior undergraduate and graduate economists in those 'years of high theory'. It will be of interest to all economists interested in the development of economics in the twentieth century.

This book explores the racial rules that are often hidden but perpetuate vast racial inequities in the United States. Future economic growth lies in the value of experiences and transformations--good and services are no longer enough. We are on the threshold, say authors Pine and Gilmore, of the Experience Economy, a new economic era in which all businesses must orchestrate memorable events for their customers. The Experience Economy offers a creative, highly original, and yet eminently practical strategy for companies to script and stage the

experiences that will transform the value of what they produce. From America Online to Walt Disney, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of creating personal experiences for both consumers and businesses. The authors urge managers to look beyond traditional pricing factors like time and cost, and consider charging for the value of the transformation that an experience offers. Goods and services, say Pine and Gilmore, are no longer enough. Experiences and transformations are the basis for future economic growth, and The Experience Economy is the script from which managers can begin to direct their own transformations. We commonly think of society as made of and by

humans, but with the proliferation of machine learning and AI technologies, this is clearly no longer the case. Billions of automated systems tacitly contribute to the social construction of reality by drawing algorithmic distinctions between the visible and the invisible, the relevant and the irrelevant, the likely and the unlikely – on and beyond platforms. Drawing on the work of Pierre Bourdieu, this book develops an original sociology of algorithms as social agents, actively participating in social life. Through a wide range of examples, Massimo Airoidi shows how society shapes algorithmic code, and how this culture in the code guides the practical behaviour of the code in the culture, shaping society in turn. This book is an abridgement of Barr and Diamond's Reforming Pensions: Principles and Policy Choices (OUP, 2008). It summarizes the Chile and

China chapters into a section of five pages. It presents material from some of the boxes of the longer book. While the longer book remains as a definitive and detailed analysis of pension reform, this new, shorter book conveys the message and conclusions to policy makers, journalists writing for the general public, and students being introduced to social security and other pension policy. The topic being condensed and summarized here is described at length in the earlier book. It stems from rapidly changing economic conditions and dramatic increases in life expectancy. Newspaper headlines across the globe anticipate again and again a massive rupture of social security and retirement systems. With public fears on the rise, officials in many countries under pressure to solve problems quickly are turning their backs on traditional pay-as-you-go systems in favor of privately financed retirement plans.

Barr and Diamond demonstrate that in the age of globalization these problems are no longer simply domestic problems. Because trade borders are becoming increasingly open and digital transactions are hastily erasing national economic boundaries, countries are no longer able to act independently in setting pension policies. These problems are particularly exacerbated in China, a state where massive restructuring of state-owned enterprises and comparatively recent dynamic entry into global markets have already taxed a system whose enormous burden is to support the retirement of the world's largest national population. The authors address these issues comprehensively in a thorough survey of pension economic principles and application to China. In *Principles*, Dalio shares what he’s learned over the course of his remarkable career. He argues that life, management, economics, and investing can all be systemized into rules and understood like machines. The book’s hundreds of practical lessons, which are built around his cornerstones of “radical truth” and “radical transparency,” include Dalio laying out the most effective ways for individuals and organizations to make decisions, approach challenges, and build strong teams. He also describes the innovative tools the firm uses to bring an idea meritocracy to life, such as creating “baseball cards” for all employees that distill their strengths and weaknesses, and employing computerized decision-

Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to disassemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of *Economics in One Lesson*.
