Today's economy is fueled by knowledge. Every leader knows this to be true, yet few have systematic methods for converting organizational knowledge into economic value. This book argues that communities of practice--groups of individuals formed around common interests and expertise--provide the ideal vehicle for driving knowledge-management strategies and building lasting competitive advantage. Written by leading experts in the field, Cultivating Communities of Practice is the first book to outline models and methods for systematically developing these

essential groups. Through compelling research and company examples, including DaimlerChrysler, McKinsey & Company, Shell, and the World Bank, authors Etienne Wenger, Richard McDermott, and William M. Snyder show how world-class organizations have leveraged communities of practice to drive strategy, generate new business opportunities, solve problems, transfer best practices, develop employees' professional skills, and recruit and retain top talent. Underscoring the new central role communities of practice are playing in today's knowledge economy, Cultivating Communities of Practice is the definitive guide to fostering, designing, and developing these powerful groups within and across organizations. Intended for all segments of agribusiness as well as non-agribusiness organizations, AGRIBUSINESS:PRINCIPLES OF MANAGEMENT presents the changing face of agribusiness in a format that is interesting, straightforward, and easy to understand. This comprehensive book approaches agribusiness as a technology-oriented industry composed of organizations ranging in size from small, family-owned farms or businesses to some of the largest corporations in the world. With multiple opportunities for self-review as well as vignettes, cases, and examples in each chapter, this book shows readers the real-world application of what they are learning and provides them with a solid understanding of what management is all about.
