A Social Work Perspective

Psychiatric Nursing

Integrating Psychotherapy, Psychopharmacology, and Complementary and Alternative Approaches Across the Life Span

Nursing Ethics and Professional Responsibility in Advanced Practice, Third Edition focuses on the historical background, knowledge and leadership skills necessary to improve the quality of health for both individuals and society.

This book integrates neuroscience with relationship science and unites disparate psychotherapeutic approaches into a model that is concise and straightforward, yet sufficiently comprehensive to provide a framework for practice. (Psychiatric)

Mental Health and Social Problems is a textbook for social work students and practitioners. It explores the complicated relationship between mental conditions and societal issues as well as examining risk and protective factors for the prevalence, course, adaptation to and recovery from mental illness. The introductory chapter presents bio-psycho-social and life-modeled approaches to helping individuals and families with mental illness. The book is divided into two parts. Part I addresses specific social problems, such as poverty, oppression, racism, war, violence, and homelessness, identifying the factors which contribute to vulnerabilities and risks for the development of mental health problems, including the barriers to accessing quality services. Part II presents the most current empirical findings and practice knowledge about prevalence, diagnosis, assessment, and intervention options for a range of common mental health problems – including personality conditions, eating conditions and affective conditions. Focusing throughout upon mental health issues for children, adolescents, adults and older adults, each chapter includes case studies and web resources. This practical book is ideal for social work students who specialize in mental health.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles – including limits on nurses' scope of practice – should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

**Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care. The leading textbook on psychotherapy for advanced practice psychiatric nurses and students Award-winning and highly lauded, Psychotherapy for the Advanced Practice Psychiatric Nurse is a how-to compendium of evidence-based approaches for both new and experienced advanced practice psychiatric nurses and students. This expanded third edition includes a revised framework for practice based on new theory and research on attachment and neurophysiology. It advises the reader on when and how to use techniques germane to various evidence-based psychotherapy approaches for the specific client problems encountered in clinical practice. This textbook guides the reader in accurate assessment through a comprehensive understanding of development and the application of neuroscience to make sense of what is happening for the patient in treatment. Contributed by leaders in the field, chapters integrate the best evidence-based approaches into a relationship-based framework and provides helpful patient-management strategies, from the first contact through termination. This gold-standard textbook and reference honors the heritage of psychiatric nursing, reaffirms the centrality of relationship for psychiatric advanced practice, and celebrates the excellence, vitality, depth, and breadth of knowledge of the specialty. In line with the recommendations of Project 2000 and the 1982 RMN syllabus this is an important new book which takes a fresh look at the requirements of trainee psychiatric nurses and their teachers. The book is divided into two parts. Part One - Concepts, establishes the nurses approach to psychiatric care as an individual and as a member of a team. Part Two - Care, explores the application of concepts through numerous patient profiles and care plans based on conceptual models. The text is well illustrated and attractively designed throughout. The author, Peggy Martin, is closely involved in nurse training and, as well as being aware of the needs of the practising nurse, has a strong commitment to Peplau's developmental model which she has used in this book.

***The most comprehensive psychiatric nursing care planning text available assists students and practitioners in providing effective care in a variety of settings. Clear presentation of information, consistent use of the nursing process, correlation of nursing and medical diagnoses, and prioritization of interventions make this text an invaluable resource. Grounded in the latest classification of the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR) and the most current list of NANDA-approved nursing diagnoses, this text covers a wide range of disorders, their psychopathology, and appropriate nursing interventions with rationales. Care plans use real clinical situations and include therapeutic and nontherapeutic dialogue examples to familiarize nurses with likely scenarios and equip them with the tools they need to feel confident in any clinical setting. The first***

*chapter, The Nursing Process, effectively describes the central principles of psychiatric nursing practice in detailing the ANA's six-step nursing process along with additional information on therapeutic nurse-client communication skills, client history and assessment tools, NIC and NOC, and more. The six-step nursing process format is maintained throughout to emphasize a practice-oriented, problem-solving approach to psychiatric care. Major psychiatric disorders are reviewed consistently and completely with sections including Etiology, Epidemiology, Assessment and Diagnostic Criteria, Interventions, and Prognosis and Discharge Criteria. With this basis of knowledge, relevant care plans are offered in the second section of each chapter. Care plans based on DSM-IV-TR medical and NANDA nursing diagnoses are logically and consistently organized with Assessment Data, Outcome Criteria, Planning and Implementation, and Evaluation sections. Assessment Data sections include detailed related factors (etiology) and defining characteristics or risk factors as appropriate for the specific diagnosis. Outcome Criteria sections give the reader clear indications of the desired end state. Planning and Implementation sections list specific, relevant, and practical nursing interventions with rationales in a clear, comprehensible two-column format. UNIQUE! Therapeutic and non-therapeutic dialogue examples are presented throughout to promote more effective client communication. Evaluation sections state the role of outcome evaluation as a critical and ongoing step in the nursing process. Client and Family Teaching boxes include Nurse Needs to Know and Teach Client and Family sections covering all aspects of post-treatment instructions for clients and caregivers. DSM-IV-TR boxes list all related DSM-IV-TR diagnoses for quick reference. Helpful appendices contain information and strategies that are timely and useful in the care of clients with mental and emotional disorders including such topics as psychiatric and psychosocial therapies, grief and loss, spirituality, and many more.*
