How global organized crime shapes the politics of borders in modern conflicts Separatism has been on the rise across the world since the end of the Cold War, dividing countries through political strife, ethnic conflict, and civil war, and redrawing the political map. Gangsters and Other Statesmen examines the role transnational mafias play in the success and failure of separatist movements, challenging conventional wisdom about the interrelation of organized crime with peacebuilding, nationalism, and state making. Danilo Mandić conducted fieldwork in the disputed territories of Kosovo and South Ossetia, talking to mobsters, separatists, and policymakers in war zones and along major smuggling routes. In this timely and provocative book, he demonstrates how globalized mafias shape the politics of borders in torn states, shedding critical light on an autonomous nonstate actor that has been largely sidelined by considerations of geopolitics, state-centered agency, and ethnonationalism. Blending extensive archival sleuthing and original ethnographic data with insights from sociology and other disciplines, Mandić argues that organized crime can be a fateful determinant of state capacity, separatist success, and ethnic conflict. Putting mafias at the center of global processes of separatism and territorial consolidation, Gangsters and Other Statesmen raises vital questions and urges reconsideration of a host of separatist cases in West Africa, the Middle East, and East Europe.

2014 Reprint of 1948 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. John Howard 'Pondoro' Taylor (1904 - 1969) was a big-game hunter of Irish descent. In Africa he experimented extensively using different types of rifles and calibers, which made him an expert in big game rifles. He is credited with developing the 'Taylor KO Factor' and wrote several now classic books. As a professional ivory hunter with some thirty years of continuous living in the African bush, John Taylor used and tested all the various calibers of British, American and German rifles, and with them killed many species of big game found on the continent of Africa. Taylor's discussion on the practical application of ballistics includes doubles, magazines, and single-shots; the practical value of steel-jacketed bullets versus those covered with cupronickel; the faults of copper-tubed bullets; the actual effects of softpoint bullets with varying degrees of lead exposure; the necessity of modern bullets that will really stand up to the requirements when fired into heavy animals; and many other valuable tips and explanations about cartridges and rifles. Remains a classic work.

A reference guide for military and police ammunition. It includes small arms, projected grenades, riot control, cannon, mortars, tank and naval, artillery shells and rockets. It provides analysis of product developments and commercial history, as well as technical descriptions, specifications and illustrations for ease of recognition.

Book of the Garand

A reimagining of the events surrounding the 1963 assassination of John F. Kennedy finds Bob Lee Swagger drawing on old records, intelligence archives and observations at the infamous site to investigate a new clue about a third bullet that mysteriously exploded. By the author of Point of Impact.

Operations in Afghanistan frequently require United States ground forces to engage and destroy the enemy at ranges beyond 300 meters. These operations occur in rugged terrain and in situations where traditional supporting fires are limited due to range or risk of collateral damage. With these limitations, the infantry in Afghanistan require a precise, lethal fire capability that exists only in a properly trained and equipped infantryman. While the infantryman is ideally suited for combat in Afghanistan, his current weapons, doctrine, and marksmanship training do not provide a precise, lethal fire capability to 500 meters and are therefore inappropriate. Comments from returning non-commissioned officers and officers reveal that about fifty percent of engagements occur past 300 meters. The enemy tactics are to engage United States forces from high ground with medium and heavy weapons, often including mortars, knowing that we are restricted by our equipment limitations and the inability of our overburdened soldiers to maneuver at elevations exceeding 6000 feet. Current equipment, training, and doctrine are optimized for engagements under 300 meters and on level terrain. There are several ways to extend the lethality of the infantry. A more effective 5.56-mm bullet can be designed which provides enhanced terminal performance out to 500 meters. A better option to increase incapacitation is to adopt a larger caliber cartridge, which will function using components of the M16/M4. The 2006 study by the Joint Service Wound Ballistics-Integrated Product Team discovered that the ideal caliber seems to be between 6.5 and 7-mm. This was also the general conclusion of all military ballistics studies since the end of World War I.

In late November 1944, after 71 days on the line in Holland, the 506th PIR was withdrawn having suffered heavy losses during Operation Market Garden, and each paratrooper was looking forward to three months rest, recuperation, and restructuring. However, this was not to be. On December 16, 1944, the Germans launched a huge offensive. The Battle of the Bulge had begun and the 101st Airborne were deployed to halt the German onslaught in the most incredible chapter of their wartime experiences. Bitter fighting in dreadful conditions saw the Third Battalion 506th PIR reduced to the size of a company before its eventual relief on January 17. The division as a whole was awarded a Unit Citation for its heroic defense of Bastogne – a first in the history of the US armed forces. With little time to recuperate, the battalion then fought on across Europe, taking part in the reduction of the Colmar Pocket, the Ruhr Pocket, and assisted in the liberation of several concentration camps in Germany. The Third Battalion finished the war occupying Hitler's mountain retreat of Berchtesgaden, held on readiness for deployment to the Pacific until Hiroshima and Nagasaki precipitated the Japanese surrender. Based on extensive interviews and first-hand accounts, and with the support of Ed Shames and other veterans, *No Victory in Valhalla* is the final dramatic part of the combat story of the Third Battalion 506th PIR. Using the words of "Screaming Eagles" themselves, it gives the reader a frank portrayal of the realities of the toughest fighting of World War II.

Guthrie, Layne Simpson, Richard Mann, Reid Coffield, and David M. Fortier. Shooting Times Guide to Accuracy covers everything you need to know about improving your marksmanship. Hatcher's Book of the Garand is the definitive chronicle of the rifle General George S. Patton called "the greatest battle implement ever devised." Major General Julian S. Hatcher follows the evolution of the M1 Garand from the first semiautomatic hunting rifles to the devastating U.S. infantry weapon of WWII. It's a battle royal of weapons design, with dozens of unforeseen problems sending inventors back to the drawing board and a scandal-hungry media waiting to discredit the guns favored by the military. Garand's fierce competition includes such legendary companies and inventors as Winchester, Colt, Johnson, Thompson, and the author himself. Hatcher follows the rigorous target and field tests that each gun underwent, leading to numerous revisions and the eventual adoption of Garand's rugged rifle. It is a difficult struggle lasting over a decade and a half, and a vital and unsung part of the war effort. In addition to the story of the Garand, Hatcher offers detailed explanations for cleaning, repairing, and firing this historic rifle. The Book of the Garand is an indispensable part of any gun enthusiast's library.
