As the title suggests, this book examines the psychology of interpersonal relations. In the context of this book, the term "interpersonal relations" denotes relations between a few, usually between two, people. How one person thinks and feels about another person, how he perceives him and what he does to him, what he expects him to do or think, how he reacts to the actions of the other--these are some of the phenomena that will be treated. Our concern will be with "surface" matters, the events that occur in everyday life on a conscious level, rather than with the unconscious processes studied by psychoanalysis in "depth" psychology. These intuitively understood and "obvious" human relations can, as we shall see, be just as challenging and psychologically significant as the deeper and stranger phenomena. The discussion will center on the person as the basic unit to be investigated. That is to say, the two-person group and its properties as a superindividual unit will not be the focus of attention. Of course, in dealing with the person as a member of a dyad, he cannot be described as a lone subject in an impersonal environment, but must be represented as standing in relation to and interacting with another person. The chapter topics included in this book include: Perceiving the Other Person; The Other Person as Perceiver; The Naive Analysis of Action; Desire and Pleasure; Environmental Effects; Sentiment; Ought and Value; Request and Command; Benefit and Harm; and Reaction to the Lot of the Other Person.

An international team of leading scholars explores the latest theories, research, and applications critical to environmental psychology Featuring the latest research and concepts in the field straight from the world's leading scholars and practitioners, Handbook of Environmental Psychology provides a balanced and comprehensive overview of this rapidly growing field. Real World Psychology, a brief version of Huffman's Psychology in Action, reflects Huffman's core "student/active classroom" philosophy and is designed specifically for the unique needs of those

who demand big things from a small package. This text ties every single concept to a real-world, in-text example by utilizing case studies, photos, graphs, news stories and charts. This brief approach allows readers to grasp the "big picture" in psychology without an abundance of supplementary details.

Through four successful editions, this briefer book uses an approach which promotes learning as an "activity" of the reader - it shows how "active learning" can motivate and excite readers to a deeper understanding of introductory psychology. With balanced and modern treatment of gender and culture, this book encourages readers to develop "critical thinking" skills. It is organized around the SQ4R (survey, question, read, recite, review) method of learning.

This book is both a sequel to and expansion of Community Psychology, published in 1992. It serves as a textbook for courses on community psychology but now also includes material on inequality and health, since both are concerned with the way an individual's social setting and the systems with which they interact affect their problems and the solutions they devise. Part 1 sets the scene by locating community psychology in its historical and contemporary context. In Part 2, disempowered groups and their physical and mental health are considered. Finally in Part 3 the application of community psychology is discussed, and the ways in which marginalised people can be helped by strengthening their communities highlighted.
