At closer inspection, though, managing instability by shoring up friendly regimes on the inside and expanding the GCC's influence outside represent two sides of the same coin. This paper aims at unpacking the GCC's responses to the "Arab Spring" by making use of the concept of "double

construction project is one in which the contractor shows up on your doorstep with the right price and all of his tools, people, and equipment ready to start, and builds exactly what you want for the price you want and finish on schedule. Everyone then goes away, happy as clams. This is the ideal, but it never occurs. The world is a competitive place; to survive, contractors must think competitively in order to win work. They must find a way to complete a quality project for the lowest price. Circumstances can easily derail even the best plans and contractors, but with planning, delays and cost overruns can be minimized. This handbook helps guide the construction manager through the trials and tribulations of selecting,

expecting, rejecting, prompting, requiring, and documenting what the contractor produces on the project. Contracts can be written that foresee common problems and provide the construction manager with their resolution. The concepts in Field Guide for Construction Management can help you do just that.

Covering the latest developments in this field, this text features edited versions of papers presented at the Sixth International Conference on Advances in Fluid Mechanics.

A Mexican jumping bean isn't a bean at all. It's a fascinating home and food source for a special kind of caterpillar! With Spanish vocabulary and a clever counting concept, this poetic story shares the life cycle of a Mexican jumping bean. This curious jumping insect is actually a seedpod from a shrub called yerba de la flecha, into which a caterpillar burrows, living inside the pod until it builds a cocoon and breaks out as a moth. Perfect for preschoolers and prereaders, this creative picture book explores the Mexican jumping bean's daily life and eventual transformation and escape from the pod.
