Increasing employment and supporting people into work are key elements of the Government's public health and welfare reform agendas. This independent review commissioned by the Department for Work and Pensions, examines scientific evidence on the health benefits of work, focusing on adults of working age and common health problems that account for two-thirds of sickness absence and long term incapacity. The study finds that there is a strong evidence base showing that work is generally good for physical and mental health and well-being, taking into account the nature and quality of work and its social context, and that worklessness is associated with poorer physical and mental health. Work can be therapeutic and can reverse the adverse health effects of unemployment, in relation to healthy p

of working age, for many disabled people, for most people with common health problems and for social security beneficiaries.
