*What do we mean when we talk about reading? What does it mean to "teach reading?" What place does reading have in the college writing classroom? Intertexts: Reading Pedagogy in College Writing Classrooms* theoretically and practically situates the teaching of reading as a common pedagogical practice in the college writing classroom. As a whole, the book argues for rethinking the separation of reading and writing within the first-year writing classroom--for an expanded notion of reading that is based on finding and creating meaning from a variety of symbolic forms, not just print-based texts but also other forms, such as Web sites and visual images. The chapter authors represent a range of cultural, personal, and rhetorical perspectives, including cultural studies, classical rhetoric, visual rhetoric, electronic literacy, reader response theory, creative writing, and critical theories of literature and literary criticism. This volume, an important contribution to composition studies, is essential reading for researchers, instructors, writing program administrators, and students involved in college writing instruction and literature.

**This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions. **Getting cancer is like a bomb going off in your life. Having chemotherapy can feel like another bomb. If you're getting ready for chemotherapy, you probably have many questions-but searching for answers on the internet can**

**be overwhelming and the pamphlets from your oncologist don't begin to tell you all you need to know. You may be scared, confused or exhausted. You'll want to know what to expect and how to prepare for chemotherapy - and so will your loved ones who are supporting you. In her concise and easy-to-read guidebook, *Braving Chemo*, Harvard-educated physician and breast cancer survivor Beverly A. Zavaleta MD cuts through the confusion to provide you with clear answers to your most urgent chemotherapy questions. ¿Can I keep my hair from falling out? ¿What should I eat? ¿How can I keep my spirits up when I'm worried about dying? Combining her medical expertise with a survivor's experience and insight, Dr. Zavaleta provides practical advice on topics such as where to find reliable information about your treatment regimen, what you should take to your chemo session, and how to keep up your strength. *Braving Chemo* also confronts the challenges of cancer recovery and coping with fear of death. Whether you are a chemotherapy patient or a cancer caregiver, *Braving Chemo* is a valuable resource about what to expect during chemo, how to minimize the side effects, and how to live life as normally as possible when life itself is on the line.**

**This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.**

**The new edition of *Gene Control* has been updated to include significant advances in the roles of the epigenome and regulatory RNAs in gene regulation. The chapter structure remains the same: the first part consists of pairs of chapters that explain the mechanisms involved and how they regulate gene expression, and the second part deals with specific biological processes (including diseases) and how they are controlled by genes. Coverage of**

**methodology has been strengthened by the inclusion more explanation and diagrams. The significant revision and updating will allow Gene Control to continue to be of value to students, scientists and clinicians interested in the topic of gene control.**

When you can't sleep, there's always NIGHTS. It all started with Lewis and Jamie. They were sneaking out late at night to be together. Then their friends started joining in. First at the old burned-down Fear Mansion. Later at the local bar Nights. They called themselves the Night People. And they carefully protected their secret world. No parents, no work, no stress. Just chilling with friends in their own private after-hours club. But then the nights turned dark. Unexplainable accidents, evil pranks...and then, later, the killings. The Night People know they have to stop the horror all by themselves, or else they risk exposure -- not to mention their lives. Things go bump in the Night....

From the New York Times Bestselling Author and Co-Star of Fox's American Grit comes a rare and powerful book on the art of being a sniper. Way of the Reaper is a step-by-step accounting of how a sniper works, through the lens of Irving's most significant kills - none of which have been told before. Each

mission is an in-depth look at a new element of eliminating the enemy, from intel to luck, recon to weaponry. Told in a thrilling narrative, this is also a heart-pounding true story of some of The Reaper's boldest missions including the longest shot of his military career on a human target of over half a mile. In Iraq and Afghanistan, Nick Irving earned his nickname in blood, destroying the enemy with his sniper rifle and in deadly firefights behind a .50 caliber machine gun. He engaged a Taliban suicide bomber during a vicious firefight, used nearly silent sub-sonic ammo, and was the target of snipers himself. Way of the Reaper attempts to place the reader in the heat of battle, experiencing the same dangers, horrors and acts of courage Irving faced as an elite member of the 3rd Ranger Battalion, 75th Ranger Regiment, while also examining the personal ramifications of taking another life. Readers will experience the rush of the hunt and the dangers that all snipers must face, while learning what it takes to become an elite manhunter. Like the Reaper himself, this explosive book blazes new territory and takes no prisoners.

'Janey is like a whirlwind of selflessness. A beautiful spirit in a beautiful country doing a beautiful thing. I encourage my children to be more 'Janey'. With more positive spirits like Janey, the world would be a better place.' - Ben Fogle

In 2014 and in her mid-twenties, Janey Lowes had been a vet for just two years when she left her home in County Durham and went travelling. Visiting Sri Lanka, she was horrified to see the state of so many of the island's dogs, in particular the three million strays. Over 5,000 miles from home, Janey decided there and then that she was going to move to the island indefinitely and do everything within her power to help them. She raised £ 10,000 to get started, setting up a charity called WECare Worldwide, and began work. Frightened, determined and excited all at the same time, she found a local who was willing to work with her and began scouring the streets for dogs in need. Some she patched up as best she could at the roadside, others she brought back and treated in a make-shift surgery she had cobbled together in her new home. With very little equipment, she and her small team came up with new and ingenious ways to treat the animals. In this highly inspiring and heartfelt book full of challenges and adventure, Janey introduces us to her world and the tireless work she carries out. As she says, 'I feel as though all these dogs are my dogs and I have a responsibility to them.' In it, we meet many of the colourful characters who have come to offer help, along with innumerable street dogs who have suffered all sorts of trauma and injury, only to be scooped up by Janey and her team and saved.

"...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's young daughter, 15 questions about their grandad – the global icon of peace and forgiveness who spent 27 years in prison. They learn about their grandfather, a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize winner, and realise that they can continue his legacy in the world today. Seen through a child's perspective, and authored jointly by Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson Mandela's 100th birthday.

Twelve-year-old Jocelyn dreams of becoming every bit as daring as her infamous father, Captain James Hook. Her grandfather, on the other hand, intends to see her starched and pressed into a fine society lady. When she's sent to Miss Eliza Crumb-Biddlecomb's Finishing School for Young Ladies, Jocelyn's hopes of following in her father's fearsome footsteps are lost in a heap of dance lessons, white gloves, and too much pink. So when Jocelyn receives a letter from her father challenging her to avenge his untimely demise at the jaws of the

crocodile, she doesn't hesitate-here at last is the adventure she has been waiting for. But Jocelyn finds that being a pirate is more than she'd bargained for. As if attempting to defeat the Neverland's most fearsome beast isn't enough to deal with, she's tasked with leading a crew of woefully untrained pirates, outwitting cannibals wild for English cuisine, and rescuing her best friend from a certain fate. The children, not to mention that pesky Peter Pan who keeps barging in uninvited. The crocodile's clock is always ticking in Heidi Pitlor's novel, a story told by an irascible narrator who is both dazzlingly witty and sharp as a sword. Will Jocelyn find the courage to slay the incessant monster before time runs out?

"Local editors Schaper and Horwitz have assembled a noteworthy collection of noir-infused stories mixed with laughter... The Akashic noir short-story anthologies are avidly sought and make ideal samplers for regional mystery collecting." --Library Journal "The best pieces in the collection turn

the clichés of the genre on their head . . . and despite the unseemly subject matter, the stories are often surprisingly funny." —City Pages (Minneapolis) Brand-new stories from John Jodzio, Tom Kaczynski, and Peter Schilling, Jr., in addition to the original volume's stories by David Housewright, Steve Thayer, Judith Guest, Mary Logue, Bruce Rubenstein, K.J. Erickson, William Kent Krueger, Ellen Hart, Brad Zellar, Mary Sharratt, Pete Hautman, Larry Millett, Quinton Skinner, Gary Bush, and Chris Everheart. "St. Paul was originally called Pig's Eye's Landing and was named after Pig's Eye Parrant--trapper, moonshiner, and proprietor of the most popular drinking establishment on the Mississippi. Traders, river rats, missionaries, soldiers, land speculators, fur trappers, and Indian agents congregated in his establishment and made their deals. When Minnesota became a territory in 1849, the town leaders, realizing that a place called Pig's Eye might not inspire civic confidence, changed the name to St. Paul, after the largest church in the city . . . Across the river, Minneapolis has its own sordid story. By the turn of the twentieth century it was considered one of the most crooked cities in the nation. Mayor Albert Alonzo Ames, with the assistance of the chief of police, his brother Fred, ran a city so corrupt that according to Lincoln Steffans its 'deliberateness, invention, and avarice has never been equaled.' As recently as the mid-'90s, Minneapolis was called 'Murderopolis' due to a rash of killings that occurred over a long hot summer . . . Every city has its share of crime, but what makes the Twin Cities unique may be that we have more than our share of good writers to chronicle it. They are homegrown and they know the territory--how the cities look from the inside, out . . ."

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces. Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in  $R^3$  as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.

Fresh off a fearsome encounter with the Neverland crocodile, Jocelyn Hook decides the most practical plan is to hunt down her father's famous fortune. After all, she'll need the gold to fund her adventuring in the future. (And luckily, Hook left her the map.) But the map proves to be a bit harder to crack than Jocelyn had hoped, and she's convinced that the horrible Peter Pan might be the only one with the answers. Of course, he doesn't really feel like helping her, so Jocelyn takes the only reasonable course of action left to her: she kidnaps his mother. Evie, though, is absolutely thrilled to be taken prisoner, so Jocelyn's daring ploy doesn't have quite the effect she'd planned for. Along with the problem of her all-too-willing captive, Jocelyn must also contend with Captain Krueger, whose general policy is that no deed is too dastardly when it comes to stealing Hook's treasure. And with the ever-shifting Whens of the Neverland working against her as well, Jocelyn, Evie, Roger, and the rest of the Hook's Revenge crew have their work cut out for them. In this rambunctious showdown between characters new and old, Jocelyn puts her own brand of pirating to the test in a quest to save her future and those she loves. Praise for Hook's Revenge "Whether a fan of J.M. Barrie's classic tale or new to Neverland, readers will be clamoring for more from this enchanting world." -- School Library Journal, starred review "Readers will delight both the story and the storytelling." -- Bulletin of the Center for Children's Books, starred review "Featuring a lively, colorful cast, and a droll narration with snarky asides by an anonymous, self-proclaimed pirate authority, this entertaining take on the Peter Pan story neatly blends action-adventure and comical and heartfelt moments." -- Booklist
