Over the past century, the explosive growth of scientific, technical, and cultural disciplines has profoundly affected our daily lives. However, processes of enculturation in sites such as graduate education that have helped to form these disciplines have received very limited research attention. In those sites, graduate students write diverse documents, including course papers, departmental examinations,

theses and dissertations, grant and fellowship applications, and disciplinary publications. Thus, writing is one of the central domains of enculturation--an activity through which graduate students and professors display and negotiate disciplinary knowledge, genres, identities, and institutional contexts. This volume explores this intersection of writing and disciplinary enculturation through a series of ethnographic case studies. These case studies provide the most thorough descriptions available today of the lived experience of graduate seminars, combining analysis of classroom talk, students' texts and professor's written responses, institutional contexts, students' representations of their writing and its contexts, and professors' representations of their tasks and their students. Given the complexities that the ethnographic data displayed, the author found that conventional notions of writing as a process of transcription and of disciplines as unified discourse communities were inadequate. As such, this book also offers an in-depth exploration of sociohistoric theory in relation to writing and disciplinary enculturation. Specific case studies introduce, apply, and further elaborate notions of: * writing as literate activity, * authorship as mediated by other people and artifacts, *

classroom tasks as speech genres, * enculturation as the interplay of authoritative and internally persuasive discourses, and * disciplinarity as a deeply heterogeneous, laminated, and dialogic process. This blend of research and theory should be of interest to scholars and students in such fields as writing studies, rhetoric, writing across the curriculum, applied linguistics, English for academic purposes, science and technology studies, higher education, and the ethnography of communication.

Noblit and Hare propose a method - meta-ethnography - for synthesizing from qualitative, interpretive studies. They show that ethnographies themselves are interpretive acts, and demonstrate that by translating metaphors and key concepts

between ethnographic studies, it is possible to develop a broader interpretive synthesis.

With an international team of expert contributors, Renee Taylor carries on Gary Kielhofner's innovative work in the 2nd Edition of his comprehensive research methodologies text. This guide bridges the gap between theorists and practitioners. It focuses on the relevance and logic of research to provide a practical, demystified approach to conducting applied research in the field for graduate students and clinicians. You'll begin with an introduction to the nature and scope of research and its place in OT and then explore research designs, measurements, and statistical analysis for qualitative, quantitative, and mixed studies. You'll examine the steps and procedures required to conduct research and how research can be used to shape professional practice and improve patient care.

Evidence-Based Practice: An Integrative Approach to Research, Administration, and Practice, Third Edition focuses on how research-based evidence drives scholarly practice.

How to Critique Journal Articles in the Social Sciences, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces “The Truth” or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

Winner of the 1st-place American Journal of Nursing Book of the Year award in nursing research/evidence-based practice for 2021! Burns & Grove's The Practice of Nursing Research: Appraisal, Synthesis, and Generation of Evidence, 9th Edition is the trusted resource for those wanting to master the research methods that are foundational to evidence-based practice. This highly respected textbook covers how to appraise and apply existing research evidence, as well as how to participate in research and quality

improvement projects. This new 9th edition has been extensively updated to reflect today's focus on online research in the digital era and includes clear, step-by-step guidelines for all major quantitative and qualitative research approaches — including supporting examples from the latest high-quality literature. There's also new content on translational research, coverage of the most current research tools and techniques, and an increased use of illustrations, tables, and other visuals to help engage visually oriented readers of all levels. Coverage of quantitative, qualitative, and other research methodologies provides a solid foundation to conduct, appraise, and apply research evidence to the realities of today's clinical practice. Balanced coverage of qualitative and quantitative methods addresses the qualitative research methodologies that are often the starting point of research projects, particularly in magnet hospitals and DNP programs. Clear, comprehensive coverage is organized into five units that include: an introduction to nursing research; coverage of the research process; application for evidence-based health care; how to analyze data, determine outcomes, and disseminate research; and how to propose and seek funding for research. Strong emphasis on evidence-based practice addresses this key graduate-level QSEN competency and reinforces how to generate research evidence and appraise and synthesize existing research

for application to clinical practice. Rich examples from nursing literature bring research principles to life. Emphasis on the most currently used research methodologies focuses on the methods used in both quantitative research and qualitative research, as well as outcomes research and mixed-methods research. Coverage of digital data collection examines the use of online research tools. Quick-reference summaries include a table of research methods inside the front cover and a list of types of research syntheses (with definitions) inside the back cover. Helpful user resources are included with each new text purchase on the companion Evolve website and feature 400 interactive review questions along with a library of 10 full-text research articles.

Essentials of Nursing Research is designed to teach students how to read, understand, analyze, and evaluate research reports in nursing practice. The Seventh Edition has been updated with stronger coverage of evidence-based practice, including content on how to read, interpret, and critique systematic reviews, which are considered by many to be a cornerstone of evidence-based practice. Also included in the Seventh Edition: a more balanced presentation of medical and social science methods and nomenclature; enhanced coverage of qualitative research; and more.
