Hindi is the most widely spoken language in the Republic of India, and Hindi speakers can also be found in Mauritius, Fiji and Trinidad. This comprehensive dictionary featuring over 40,000 modern entries and a useful guide to transliterations is ideal for students or travelers to any of these regions.

The book 12 Practice Sets for RRB Junior Engineer Mechanical & Allied Engineering Stage II Exam with 3 Online Tests provides 12 Practice Sets - 9 in the book and 3 Online - on the exact pattern as specified in the latest notification. The book also provides 2014 & 2015 Solved Papers. Each Practice Set contains 150 questions divided into 5 sections: Physics & Chemistry (15), General Awareness (15), Basic Computer Fundamentals (10), Basic Environmental & Pollution Control (10) and Technical Abilities (100). The solution to each Test is provided at the end of the book. This book will really help the students in developing the required Speed and Strike Rate, which can increase their final score by 15% in the final exam.

This working manual covers everything from theory, practical design, templates, installation, filling, equipment, maintenance to removal. With the combination of the TVA Technical Monograph 75-Steel Sheet Pile Cofferdams on the Rock manual and the US Corps of Engineers manual - Theoretical Manual for Design of Cellular Sheet Pile Structures our Cellular Cofferdams handbook make for an excellent reference book. Cellular Cofferdams, the large, barrel-like, interconnected structures formed of steel sheet piling and filled with coarse soil. Generally utilized for dewatering large construction sites as well as building piers, quaywalls, bulkheads, breakwaters and artificial islands. Over the years, a few papers on design theory have come forth, but only one complete publication devoted to the entire subject.

Estimating and Costing in Civil Engineering

Highway Engineering

Covers airport planning and design.

The book aims at presenting the topics of Bridge Engineering expressed in simple and lucid language. The presentation is comprehensive and methodical as well as interesting and easy to follow.

This book on Highway Engineering shall be useful for B.E./B.Tech & M.E/ M.Tech students of Civil Engineering. It shall also be useful for practicing Engineering and designers.

The book in its present form introduces detailed descriptions and illustrative solved problems in the fields of Water Supply, Sanitary and Environmental Engineering. The entire subject matter has been split up in three parts: Part I Water Supply Engineering Part II Sanitary Engineering Part III Environmental Engineering. The first part deals with Water Supply Engineering which is related to demand of water for various purposes in human life, sources of water supply, quantity and quality of water, treatment and distribution of water, etc. The second part deals with Sanitary Engineering which is related to quality and quantity of sewage, construction and design of sewers, methods of treatment of sewage, etc. The third part discusses various aspects of Environmental Engineering including air pollution, noise pollution, etc. A typical design of a domestic sewage treatment plant is given in the Appendix as an additional attraction. The book now contains: * 253 * 140 * 60 * 610 Self-explanatory and neat diagrams Illustrative problems Useful tables Questions at the end of chapters. It is hoped that the book in its present form will be extremely useful to the Engineering students preparing for the Degree Examinations in Civil Engineering of all the Indian Universities, Diploma Examinations conducted by various Boards of Technical Education, Certificate Courses as well as for A.M.I.E., U.P.S.C., other similar Competitive and Professional Examinations.

Part-I: ROAD ENGINEERING: Introduction * Glossary * History of Development of Highway and Planning * highway Planning * Highway Economics and Financing * Guiding Principles of Route Selection and Highway Location * Drainage * Highway Materials * Geometric Design * Highway Construction * Hill Roads * Highway Machinery Roads Arboriculture * Traffic Engineering * Highway Failure and Their Maintenance * Pavement Design * Quality Control * Objective Type Questions on Highways * Solved Problems on Highways. Part-II : RAILWAY ENGINEERING: History of Railways * Railway Track & Track Stresses * Railway Gauges * Rails * Sleepers * Ballast * Foundation and its Drainage * Track Fitting and Fastening Track Alignment & Surveying * Traction and Tractive Resistance * Rolling Stock of Railways * Geometric Design of a Railway Track * Creep * Stations and Yards * Station Equipments * Points, Crossings and Simple Layouts * Signalling & Inter-locking * Level Crossings * Welding of Railways * Long and short Welded Rails * Manual Maintenance of Track * Mechanised Maintenance of Track * Directed Track Maintenance * Measured Shovel Packing Track Tolerances * Track Renewal * Accidents * Duties of Permanent Way Officials * Material Management * Objective Type Questions on Railways * Solved Problems on Railways. Part-III: BRIDGE ENGINEERING : Introduction * Bridge Terminology * Investigation and Planning for Bridges * Type of Bridges * General Principles of Design * Sub Structures * Foundations * Super Structures of Arch Designs * Girder Bridges * Low Cost Bridges * Permanent Small Bridges * Bearings * Loads on Bridges * Design of Bridge Foundation * Design of Arch Bridges * Design of Solid R.C.C. Slab Bridges * R.C.C. Girder Bridges * Inspection of Bridges * Maintenance of Bridges * Testing Strengthening of Bridge * Protection and Training Works for Bridges * Objective Type Question on Bridges Engineering. Part-IV: TUNNEL ENGINEERING : General Aspects * Alignment of Tunnels * Drilling * Blasting * Tunneling * Shafts * Ventilation, Lighting and Drainage of Tunnels * Tunnel Lining * Safety in Tunnelling * Objective Type Questions on Tunnel Engineering. Part-V: HARBOUR-DOCK ENGINEERING: Water Transportation and Sea * Terminology * Natural Phenomena- Wind, Wave and Cyclones * Harbours and Ports * Break Water * Docks * Dry or Repair Docks * Locks * Channel, Basin and Berths * Appurtenances of a Harbour * Apron, Transit Sheds and Warehouses * Dredging and Dredgers * Navigational Aids * Shore Protection Works. Water Supply And Sanitary Engineering

This textbook covers the very wide spectrum of all aspects of railway engineering for all engineering disciplines, in a 'broad brush' way giving a good overall knowledge of what is involved in planning, designing, constructing and maintaining a railway. It covers all types of railway systems including light rail and metro as well as main line. The first edition has proved very popular both with students new to railways and with practicing engineers who need to work in this newly expanding area. In the second edition, the illustrations have been improved and brought up to date, particularly with the introduction of 30 colour pages which include many newly taken photographs. The text has been reviewed for present day accuracy and, where necessary, has been modified or expanded to include reference to recent trends or developments. New topics include automatic train control, level crossings, dot matrix indicators, measures for the mobility impaired, reinforced earth structures, air conditioning, etc. Recent railway experience, both technical and political, has also been reflected in the commentary.

First published in 1979, Airport Engineering by Ashford and Wright, has become a classic textbook in the education of airport engineers and transportation planners. Over the past twenty years, construction of new airports in the US has waned as construction abroad boomed. This new edition of Airport Engineering will respond to this shift in the growth of airports globally, with a focus on the role of the International Civil Aviation Organization (ICAO), while still providing the best practices and tested fundamentals that have made the book successful for over 30 years.

This well-known text-book now in its Nineteenth Edition, provides an up-to-date account of the basic principles on various functions and working of Railways. Its excellent material fills a significant void in the literature of Railway Engineering.

RAILWAY ENGINEERING

Basic Civil Engineering is designed to enrich the preliminary conceptual knowledge about civil engineering to the students of non-civil branches of engineering. The coverage includes materials for construction, building construction, basic surveying and other major topics like environmental engineering, geo-technical engineering, transport traffic and urban engineering, irrigation & water supply engineering and CAD.

Railway Engineering has been specially designed for undergraduate students of civil engineering. From fundamental topics to modern technological developments, the book covers all aspects of the railways including various modernization plans covering tracks, locomotives, and rolling stock. Important statistical data about the Indian Railways and other useful information have also been incorporated to make the coverage comprehensive. A number of illustrative examples supplement text to aid easy understanding of design methods discussed. The book should also serve the need of students of polytechnics and those appearing of the AMIE examination and would also be a ready reference for railway professionals.

A Basic Text-book for Engineering Students

This text on building materials includes discussion of structural clay products, rocks and stones, wood, materials for making concrete, ferrous and non-ferrous metals, and miscellaneous materials. Authoritative, Up-to-Date Coverage of Airport Planning and Design Fully updated to reflect the significant changes that have occurred in the aviation industry, the new edition of this classic text offers definitive guidance on every aspect of planning, design, engineering, and renovating airports and terminals. Planning and Design of Airports, Fifth Edition, includes complete coverage of the latest aircraft and air traffic management technologies, passenger processing technologies, computer-based analytical and design models, new guidelines for estimating required runway lengths and pavement thicknesses, current Federal Aviation Administration (FAA) and International Civil Aviation Organization (ICAO) standards, and more. Widely recognized as the field's standard text, this time-tested, expertly written reference is the best and most trusted source of information on current practice, techniques, and innovations in airport planning and design. COVERAGE INCLUDES: Designing facilities to accommodate a wide variety of aircraft Air traffic management Airport planning studies Forecasting for future demands on airport system components Geometric design of the airfield Structural design of airport pavements Airport lighting, marking, and signage Planning and design of the terminal area Airport security planning Airport airside capacity and delay Finance strategies, including grants, bonds, and private investment Environmental planning Heliports

This text-book concisely formulates the basic principles of the subject matter in simple language presented in two sections. The Section I - Harbour and Dock Engineering, is well-divided in twelve chapters including chapter on 'Planning and Layout of Ports'. Also the approach of the write-up has been changed according to the form of facilities and requirements of Harbours and Ports. The Section II - Tunnel Engineering, is also well-divided in twelve chapters including newly developed methods like New Austrian Tunnelling Method (NATM), Shield methods and chapters on 'Stages in Tunnel Construction', 'Tunnelling in Water Bearing Soils' and also 'Health Protection in Tunnels' have been incorporated. A cumulative list of works represented by Library of Congress printed cards.

An attempt has been made by the authors in this book to explain the general principles of the subject of Town Planning. The subject matter is expressed in a simple language and practical manner. The treatment is clear, methodical as well as interesting and easy to follow.

*This well-known and comprehensive text-book, now in its Twenty-Fifth Edition presents in lucid language the complete and full details of the various complicated topics on the subject of Building Construction. The entire subject-matter of this acclaimed book has been split up in two parts: * Elementary Building Construction * Advanced Building Construction. It is characterised by the clear, methodical and also step-by-step treatment of the subject, and written in a highly readable style. The SI units have been used throughout the book.*
