A Conspiracy of Cells presents the first full account of one of medical science's more bizarre and costly mistakes. On October 4, 1951, a young black woman named Henrietta Lacks died of cervical cancer. That is, most of Henrietta Lacks died. In a laboratory dish at the Johns Hopkins Medical Center in Baltimore, a few cells taken from her fatal tumor continued to live--to thrive, in fact. For reasons unknown, her cells, code-named "HeLa," grew more vigorously than any other cells in culture at the time. Long-time science reporter Michael Gold describes in graphic detail how the errant HeLa cells spread, contaminating and overwhelming other cell cultures, sabotaging research projects, and eluding detection until they had managed to infiltrate scientific laboratories worldwide. He tracks the efforts of geneticist Walter Nelson-Rees to alert a sceptical scientific community to the rampant HeLa contamination. And he reconstructs Nelson-Rees's crusade to expose the embarrassing mistakes and bogus conclusions of researchers who unknowingly abetted HeLa's spread.

How do visual images shape the practice of medicine? What role does visual representation play in the cultivation of medical ways of seeing? And how has medicine's visual culture changed in the digital age? Kirsten Ostherr's ambitious study explores 120 years of medical image-making to explain how visual representations shape medical education and practice. Marshaling powerful, vivid examples she demonstrates how medical images created by the healthcare industry, documentary filmmakers, experimental artists, and the mass media acquire cultural meaning and influence doctors' and patients' understandings of health and disease. Her analysis proceeds chronologically, turning from the earliest experiments with medical filmmaking by the American College of Surgeons, to the place of health films in the "golden age" of instructional film in the 1960s. Ostherr considers the shift to television as the dominant medium of health education, highlighting the evolving status of realism, the techniques employed to bridge the entertainment-education divide, the role of expert consultants and sponsors, and the tradeoffs made by professionals to reach a broad audience. The rise of physician advice segments on newsmagazines forms a transition between medical dramas like Marcus Welby, MD and more recent reality shows like Boston Med and Doctor 90210. Concluding with a section on advertising and social media in the health care setting, the book ends with ten key lessons for the future of medical media.

"In a stirring and radical new treatise from one of America's most respected voices in health and medicine, Well examines the subtle factors that determine who gets to be healthy in the United States. Physician Sandro Galea reckons with our country's many fraught relationships--with history, money, pain, and pleasure, which are in turn augmented by factors like luck, compassion, and values--in terms of how they determine the health of those in the world's richest country. Well represents a radical new approach to Americans' ingrained understanding of health. It examines the forces that are not typically part of the health discussion--but should be--and is a clarion call for where the country goes from here"--

How to Use This Book This book is to be used alongside the bestselling book, The Immortal Life of Henrietta Lacks by Rebecca Skloot for anyone interested in learning about one of the most important tools in medicine, vital for developing the polio vaccine, cloning, gene mapping, and more, the HeLa cells. This is also the story of the collision between ethics, race, and medicine; of scientific discovery and faith healing; and a daughter consumed with questions about the mother she never knew. For students: The study questions are in order and follow Rebecca Skloot's narrative. Answer questions as you read the book. Answers follow each question. For teachers: This is an easy and interesting resource to help your students learn about a specific tool used in medicine, the HeLa cell and how it originated and the impact its discovery had on medicine and the population. Use your own unique teaching style to supplement the Pembroke Notes with engaging activities and links for further investigating. With the new Common Core standards and a push to increased rigor, I have added a Writing Workshop section at the end of my book to help you with writing assignments. For homeschools: Your high school student will love the easy guide to help him/her in her reading The Immortal Life of Henrietta Lacks. Parents, be prepared for active discussions with your teenager while you read along. A Writing Workshop is supplied at the end of the book as a guide."

NEW YORK TIMES BESTSELLER • From the bestselling author of Before We Were Yours comes a dramatic historical novel of three young women searching for family amid the destruction of the post–Civil War South, and of a modern-day teacher who learns of their story and its vital connection to her students’ lives. “An absorbing historical . . . enthralling.”—Library Journal Bestselling author Lisa Wingate brings to life startling stories from actual “Lost Friends” advertisements that appeared in Southern newspapers after the Civil War, as newly freed slaves desperately searched for loved ones who had been sold away. Louisiana, 1875: In the tumultuous era of Reconstruction, three young women set off as unwilling companions on a perilous quest: Hannie, a freed slave; Lavinia, the pampered heir to a now destitute plantation; and Juneau Jane, Lavinia’s Creole half sister. Each carries private wounds and powerful secrets as they head for Texas, following roads rife with vigilantes and soldiers still fighting a war lost a decade before. For Lavinia and Juneau Jane, the journey is one of stolen inheritance and financial desperation, but for Hannie, torn from her mother and siblings before slavery’s end, the pilgrimage west reignites an agonizing question: Could her long-lost family still be out there? Beyond the swamps lie the limitless frontiers of Texas and, improbably, hope. Louisiana, 1987: For first-year teacher Benedetta Silva, a subsidized job at a poor rural school seems like the ticket to canceling her hefty student debt—until she lands in a tiny, out-of-step Mississippi River town. Augustine, Louisiana, is suspicious of new ideas and new people, and Benny can scarcely comprehend the lives of her poverty-stricken students. But amid the gnarled live oaks and run-down plantation homes lie the century-old history of three young women, a long-ago journey, and a hidden book that could change everything.

Louis Zamperini, a clever young delinquent turned Olympic runner, became an airman when the war came. In 1943 his plane crashed into the Pacific Ocean, where sharks, a sinking raft, thirst, starvation, and enemy aircraft, tested his will and endurance.

E. R. Frank’s seminal first novel weaves together the stories of eleven teenagers in one city over seven years in this groundbreaking and “impressive debut” (Publishers Weekly, starred review). Why does Gingerbread always have a smile on his face? “Because life is funny,” he tells Keisha. But for her—and almost everyone else in her Brooklyn neighborhood—there doesn’t seem to be much to laugh about. China, Ebony, and Grace are best friends, but Grace’s mother isn’t crazy about her being friends with two girls who aren’t white, and each cut Ebony makes on her wrist seems to drive them even further apart. Just across the schoolyard there’s Eric who has to raise his younger brother Mickey, even though no one expects him to amount to anything. Meanwhile, Sonia’s Muslim parents expect everything of her, and it may be more than she is able to give after she suffers a shattering loss. When Drew brings his father’s Jaguar into Sam’s family’s auto body shop across town they seem to be from opposite sides of the tracks, but Drew’s the one hiding a dark family secret. And he’s not the only one.

An outcast even among her fellow Africans, she is on the cusp of womanhood--where greater pain awaits. And so when Caesar, a slave who has recently arrived from Virginia, urges her to join him on the Underground Railroad, she seizes the opportunity and escapes with him. In Colson Whitehead's ingenious conception, the Underground Railroad is no mere metaphor: engineers and conductors operate a secret network of actual tracks and tunnels beneath the Southern soil. Cora embarks on a harrowing flight from one state to the next, encountering, like Gulliver, strange yet familiar iterations of her own world at each stop. As Whitehead brilliantly re-creates the terrors of the antebellum era, he weaves in the saga of our nation, from the brutal abduction of Africans to the unfulfilled promises of the present day. *The Underground Railroad* is both the gripping tale of one woman's will to escape the horrors of bondage--and a powerful meditation on the history we all share.

NEW YORK TIMES BESTSELLER • The “compassionate” (People), “startling” (Baltimore Sun), “moving” (Chicago Tribune) true story of two kids with the same name from the city: One went on to be a Rhodes Scholar, decorated combat veteran, White House Fellow, and business leader. The other is serving a life sentence in prison. In development as a feature film executive produced by Stephen Curry, who selected the book as his “Underrated” Book Club Pick with Literati The chilling truth is that his story could have been mine. The tragedy is that my story could have been his. In December 2000, the Baltimore Sun ran a small piece about Wes Moore, a local student who had just received a Rhodes Scholarship. The same paper also ran a series of articles about four young men who had allegedly killed a police officer in a spectacularly botched armed robbery. The police were still hunting for two of the suspects who had gone on the lam, a pair of brothers. One was named Wes Moore. Wes just couldn't shake off the unsettling coincidence, or the inkling that the two shared much more than space in the same newspaper. After following the story of the robbery, the manhunt, and the trial to its conclusion, he wrote a letter to the other Wes, now a convicted murderer serving a life sentence without the possibility of parole. His letter tentatively asked the questions that had been haunting him: Who are you? How did this happen? That letter led to a correspondence and relationship that have lasted for several years. Over dozens of letters and prison visits, Wes discovered that the other Wes had had a life not unlike his own: Both had had difficult childhoods, both were fatherless; they'd hung out on similar corners with similar crews, and both had run into trouble with the police. At each stage of their young lives they had come across similar moments of decision, yet their choices would lead them to astonishingly different destinies. Told in alternating dramatic narratives that take readers from heart-wrenching losses to moments of surprising redemption, *The Other Wes Moore* tells the story of a generation of boys trying to find their way in a hostile world. BONUS: This edition contains a new afterword and a *The Other Wes Moore* discussion guide.

A lyrical memoir that identifies the pressure to conform as a hidden threat to our civil rights, drawing on the author's life as a gay Asian American man and his career as an acclaimed legal scholar. "[Kenji] Yoshino offers his personal search for authenticity as an encouragement for everyone to think deeply about the ways in which all of us have covered our true selves. . . . We really do feel newly inspired."—The New York Times Book Review Everyone covers. To cover is to downplay a disfavored trait so as to blend into the mainstream. Because all of us possess stigmatized attributes, we all encounter pressure to cover in our daily lives. Racial minorities are pressed to "act white" by changing their names, languages, or cultural practices. Women are told to "play like men" at work. Gays are asked not to engage in public displays of same-sex affection. The devout are instructed to minimize expressions of faith, and individuals with disabilities are urged to conceal the paraphernalia that permit them to function. Given its pervasiveness, we may experience this pressure to be a simple fact of social life. Against conventional understanding, Kenji Yoshino argues that the work of American civil rights law will not be complete until it attends to the harms of coerced conformity. Though we have come to some consensus against penalizing people for differences based on race, sex, sexual orientation, religion, and disability, we still routinely deny equal treatment to people who refuse to downplay differences along these lines. At the same time, Yoshino is responsive to the American exasperation with identity politics, which often seems like an endless parade of groups asking for state and social solicitude. He observes that the ubiquity of covering provides an opportunity to lift civil rights into a higher, more universal register. Since we all experience the covering demand, we can all make common cause around a new civil rights paradigm based on our desire for authenticity—a desire that brings us together rather than driving us apart. Praise for Covering "Yoshino argues convincingly in this book, part luminous, moving memoir, part cogent, level-headed treatise, that covering is going to become more and more a civil rights issue as the nation (and the nation's courts) struggle with an increasingly multiethnic America."—San Francisco Chronicle "[A] remarkable debut . . . [Yoshino's] sense of justice is pragmatic and infectious."—Time Out New York

The Spirit Catches You and You Fall Down

A Novel

The Black Count

WINNER OF THE 2013 PULITZER PRIZE FOR BIOGRAPHY General Alex Dumas is a man almost unknown today, yet his story is strikingly familiar—because his son, the novelist Alexandre Dumas, used his larger-than-life feats as inspiration for such classics as *The Count of Monte Cristo* and *The Three Musketeers*. But, hidden behind General Dumas's swashbuckling adventures was an even more incredible secret: he was the son of a black slave—who rose higher in the white world than any man of his race would before our own time. Born in Saint-Domingue (now Haiti), Alex Dumas made his way to Paris, where he rose to command armies at the height of the Revolution—until he met an implacable enemy he could not defeat. *The Black Count* is simultaneously a riveting adventure story, a lushly textured evocation of 18th-century France, and a window into the modern world's first multi-racial society. *TIME* magazine called *The Black Count* "one of those quintessentially human stories of strength and courage that sheds light on the historical moment that made it possible." But it is also a heartbreaking story of the enduring bonds of love between a father and son.

This book assists new and experienced scholars in planning and conducting high quality, contemporary studies for knowledge building about substance use. The target

audience is individuals new to substance use as a field of study, either as novice researchers or as experienced researchers in other areas who find themselves lacking experience to address overlapping issues of substance use. Organized around a translational science framework, the contents address substance use research about epidemiology, etiology, intervention efficacy and effectiveness, and implementation of evidence-informed interventions. In addition, examples and issues are drawn from social work traditions involving multiple levels of study (organisms to large social systems), integrating biopsychosocial aspects, and adopting a lifespan perspective. The authors examine the implications for research of current "great debates" in the field and present readers with a variety of specific substance use research resources and tools. This practical "how to" guide takes the reader step-by-step through issues specific to substance use research in study design, participant recruitment and retention, measurement and analysis, and the processes involved in the dissemination, diffusion, and implementation of evidence-informed innovations. A variety of technical resources and measurement tools are provided, as are references to journals for scholars to consider both as knowledge resources and as outlets for disseminating their work. In sum, this book offers a fresh approach to conducting substance use research that is not readily available in other texts.

The Happy Student is written by a student for students. Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first "immortal" human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb's effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.*

Preceded by Culture care diversity and universality: a worldwide nursing theory / [edited by] Madeleine M. Leininger, Marilyn R. McFarland. 2nd ed. c2006.

This book is a theoretical inquiry into alternative pedagogies that challenge current standardized practices in the field of science education. Through Mandy Hoffen, a fictional persona, Dana McCullough, the author, explores how stories of Henrietta Lacks become part of a conspiracy to change science education. Mandy Hoffen, however, never expected to find herself in the middle of a conspiracy. As a science teacher of 20 plus years, she worked diligently to meet the needs of her charges, who are currently ninth and tenth grade biology students in an age of standardized testing. The author also creates imaginary dialogues which serve as the theoretical framework for each chapter. Each chapter unfolds in a form of a play with imaginary settings and events that bring Henrietta Lacks back from the grave to participate in conversations about science, society, and social justice. The imaginary conversations are based on the author's experiences in graduate courses, direct quotations from philosophers of science, historians of science, science educators, curriculum theorists, and stories of students in their study of Henrietta Lacks in a high school biology classroom. The play describes the journey of a graduate student/high school teacher as she researches the importance of the philosophy of science, history of science, science curriculum and social justice in science education. Through reflections on fictional conversations, stories of Henrietta Lacks are examined and described in multiple settings, beginning in an imaginary academic meeting, and ending with student conversations in a classroom. Each setting provides a space for conversations wherein participants explore their personal connections with science, science curriculum, issues of social justice related to science, and Henrietta Lacks. This book will be of interest to graduate students, scholars, and undergraduates in curriculum studies, educational foundations, and teacher

education, and those interested in alternative research methodologies. This is the first book to intentionally address the stories of Henrietta Lacks and their importance in the field of curriculum studies, science studies, and current standardized high school science curriculum.

Fifty-two inspiring and insightful profiles of history's brightest female scientists. "Rachel Swaby's no-nonsense and needed Headstrong dynamically profiles historically overlooked female visionaries in science, technology, engineering, and math."—Elle In 2013, the New York Times published an obituary for Yvonne Brill. It began: "She made a mean beef stroganoff, followed her husband from job to job, and took eight years off from work to raise three children." It wasn't until the second paragraph that readers discovered why the Times had devoted several hundred words to her life: Brill was a brilliant rocket scientist who invented a propulsion system to keep communications satellites in orbit, and had recently been awarded the National Medal of Technology and Innovation. Among the questions the obituary—and consequent outcry—prompted were, Who are the role models for today's female scientists, and where can we find the stories that cast them in their true light? Headstrong delivers a powerful, global, and engaging response. Covering Nobel Prize winners and major innovators, as well as lesser-known but hugely significant scientists who influence our every day, Rachel Swaby's vibrant profiles span centuries of courageous thinkers and illustrate how each one's ideas developed, from their first moment of scientific engagement through the research and discovery for which they're best known. This fascinating tour reveals 52 women at their best—while encouraging and inspiring a new generation of girls to put on their lab coats.

A new vocabulary for African American Studies As the longest-standing interdisciplinary field, African American Studies has laid the foundation for critically analyzing issues of race, ethnicity, and culture within the academy and beyond. This volume assembles the keywords of this field for the first time, exploring not only the history of those categories but their continued relevance in the contemporary moment. Taking up a vast array of issues such as slavery, colonialism, prison expansion, sexuality, gender, feminism, war, and popular culture, Keywords for African American Studies showcases the startling breadth that characterizes the field. Featuring an august group of contributors across the social sciences and the humanities, the keywords assembled within the pages of this volume exemplify the depth and range of scholarly inquiry into Black life in the United States. Connecting lineages of Black knowledge production to contemporary considerations of race, gender, class, and sexuality, Keywords for African American Studies provides a model for how the scholarship of the field can meet the challenges of our social world.

What are the conditions needed for our nation to bridge cultural and racial divides? By "writing beyond race," noted cultural critic bell hooks models the constructive ways scholars, activists, and readers can challenge and change systems of domination. In the spirit of previous classics like Outlaw Culture and Reel to Real, this new collection of compelling essays interrogates contemporary cultural notions of race, gender, and class. From the films Precious and Crash to recent biographies of Malcolm X and Henrietta Lacks, hooks offers provocative insights into the way race is being talked about in this "post-racial" era.

The award-winning book that inspired an Apple Original series from Apple TV+ • Pulitzer Prize winner Sheri Fink's landmark investigation of patient deaths at a New Orleans hospital ravaged by Hurricane Katrina—and her suspenseful portrayal of the quest for truth and justice. In the tradition of the best investigative journalism, physician and reporter Sheri Fink reconstructs 5 days at Memorial Medical Center and draws the reader into the lives of those who struggled mightily to survive and maintain life amid chaos. After Katrina struck and the floodwaters rose, the power failed, and the heat climbed, exhausted caregivers chose to designate certain patients last for rescue. Months later, a doctor and two nurses were arrested and accused of injecting some of those patients with life-ending drugs. Five Days at Memorial, the culmination of six years of reporting, unspools the mystery of what happened in those days, bringing the reader into a hospital fighting for its life and into a conversation about the most terrifying form of health care rationing. In a voice at once involving and fair, masterful and intimate, Fink exposes the hidden dilemmas of end-of-life care and reveals just how ill-prepared we are for the impact of large-scale disasters—and how we can do better. A remarkable book, engrossing from start to finish, Five Days at Memorial radically transforms your understanding of human nature in crisis. One of The New York Times' Best Ten Books of the Year

What HeLa Cells a.k.a. Immortal Cells Are and Why They Are Important. An Example of Racism in Medicine. HeLa cells are the most well-known and widely used in the biological research community. HeLa cells have played a key role in many of the scientific developments of the last 60+ years including the development of the Polio vaccine, as well as work on HIV and numerous cancer studies. The HeLa cell line has endured as a research model for the last ~70 years because it can be easily grown, is incredibly robust and is available as a free resource from John Hopkins. Moreover, with the volume of work done on these cells it means that it is well characterised making it possible to infer more information. One issue with HeLa cells is that due to their robust nature they can inadvertently end up as contaminants of other cell lines. Thus, an attempt has been made in this E-Booklet to include the following Key Takeaways- HeLa Cells: · HeLa cells are the first immortal human cell line. · The cells came from a cervical cancer sample obtained from Henrietta Lack in 1951, without her knowledge or permission. · HeLa cells have led to many important scientific discoveries, yet there are disadvantages to working with them. · HeLa cells have led to the examination of the ethical considerations of working with human cells. Further, it is also attempted to deliver an Image Gallery of several Microscopic views for the enthusiastic Medicos at one click! ...Dr. H. K. Saboowala. M.B.(Bom) .M.R.S.H.(London)

Despite the fact that publishers and policy-makers have had increasing influence over classrooms, it is the teacher who must make decisions on a minute-by-minute basis about what will help specific students learn. Similarly, local administrators must make key decisions at the school and district level that will best serve particular communities of teachers, students, and parents. Action research offers educators and other stakeholders a systematic way to research and reflect on specific students, classrooms, schools, and communities in order to solve local problems and improve local conditions. This book offers an overview of various definitions and perspectives on action research without prescribing any single approach. Instead, key questions are explored: Who conducts action research? Why? How? Possible answers sketch the many types of possible projects, ranging from an individual teacher trying to improve the experience of a particular student to a group of educators and community members striving to improve local socioeconomic conditions. The Action Research Primer presents an accessible but comprehensive introduction to the field, providing a basic compass and map for the interested practitioner. Chapters include a brief historical overview, an introduction to competing research paradigms, discussion of key issues that inform project design, a serviceable guide to process, and an extensive list of resources pointing to more detail on the many categories, communities, and publication outlets of action research.

“ Oliver Sacks meets Stephen King ” * in this propulsive, haunting journey into the life of the most studied human research subject of all time, the amnesic known as Patient H.M. For readers of *The Immortal Life of Henrietta Lacks* comes a story that has much to teach us about our relentless pursuit of knowledge. Winner of the PEN/E.O. Wilson Literary Science Writing Award • Los Angeles Times Book Prize Winner NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Washington Post • New York Post • NPR • The Economist • New York • Wired • Kirkus Reviews • BookPage In 1953, a twenty-seven-year-old factory worker named Henry Molaison—who suffered from severe epilepsy—received a radical new version of the then-common lobotomy, targeting the most mysterious structures in the brain. The operation failed to eliminate Henry ’ s seizures, but it did have an unintended effect: Henry was left profoundly amnesic, unable to create long-term memories. Over the next sixty years, Patient H.M., as Henry was known, became the most studied individual in the history of neuroscience, a human guinea pig who would teach us much of what we know about memory today. Patient H.M. is, at times, a deeply personal journey. Dittrich ’ s grandfather was the brilliant, morally complex surgeon who operated on Molaison—and thousands of other patients. The author ’ s investigation into the dark roots of modern memory science ultimately forces him to confront unsettling secrets in his own family history, and to reveal the tragedy that fueled his grandfather ’ s relentless experimentation—experimentation that would revolutionize our understanding of ourselves. Dittrich uses the case of Patient H.M. as a starting point for a kaleidoscopic journey, one that moves from the first recorded brain surgeries in ancient Egypt to the cutting-edge laboratories of MIT. He takes readers inside the old asylums and operating theaters where psychosurgeons, as they called themselves, conducted their human experiments, and behind the scenes of a bitter custody battle over the ownership of the most important brain in the world. Patient H.M. combines the best of biography, memoir, and science journalism to create a haunting, endlessly fascinating story, one that reveals the wondrous and devastating things that can happen when hubris, ambition, and human imperfection collide. “ An exciting, artful blend of family and medical history. ” —The New York Times *Kirkus Reviews (starred review)
