Workflow-based Process Controlling Systems provide companies with the ability to measure the operational performance of their business processes in a timely and accurate fashion. The combination of workflow audit trails with data warehouse technology and operational business data allows for complex analyses that can support managers in their assessment of an organization's performance. The increasing maturity of business process management and data warehouse systems enables the design and development of advanced process-oriented management information systems. Michael zur Muehlen discusses the integration of workflow audit trail data with existing data warehouse structures and develops a reference architecture for process-oriented management information systems. Starting with an organizational and technical analysis of process organizations, this book provides a comprehensive documentation of business process management, workflow technology, and existing standardization efforts. The proposed reference architecture is validated in an industry context. A prototypical implementation of the reference architecture and its integration with a commercial business

process management system are demonstrated as well. This book is directed at both practitioners and academics in the fields of business process management, management accounting, and information systems research. Michael zur Muehlen is Assistant Professor of Information Systems at Stevens Institute of Technology in Hoboken, NJ, USA, where he directs the SAP/IDS Center of Excellence in Business Process Innovation. Michael is an active contributor to several standardization groups in the workflow domain, and a director of the AIS special interest group on Process Automation and Management.

Mood mapping simply involves plotting how you feel against your energy levels, to determine your current mood. Dr Liz Miller then gives you the tools you need to lift your low mood, so improving your mental health and wellbeing. Dr Miller developed this technique as a result of her own diagnosis of bipolar disorder (manic depression), and of overcoming it, leading her to seek ways to improve the mental health of others. This innovative book illustrates:

- * The Five Keys to Moods: learn to identify the physical or emotional factors that affect your moods*
- * The Miller Mood Map: learn to visually map your mood to increase self-awareness*
- * Practical ways to implement change to alleviate low mood*

Mood mapping is an essential life skill; by giving an innovative perspective to your life, it enables you to be happier, calmer and to bring positivity to your own life and to those around you. 'A gloriously accessible read from a truly unique voice' Mary O'Hara, Guardian 'It's great to have such accessible and positive advice about our moods, which, after all, govern everything we do. I love the idea of MoodMapping' Dr Phil Hammond 'Can help you find calm and take the edge off your anxieties' Evening Standard 'MoodMapping is a fantastic tool for managing your mental health and taking control of your life' Jonathan Naess, Founder of Stand to Reason

From GPO Bookstore's Website: Authors with diverse backgrounds in science, history, anthropology, and more, consider culture in the context of the cosmos. How does our knowledge of cosmic evolution affect terrestrial culture?

Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-understanding through science, rational reasoning, and mathematics? Book includes bibliographical references and an index.

The Love That Dare Not Speak Its Name by Fiza Pathan is a collection of twenty-one original short stories, each centered on some aspect of the social, cultural, psychological, and emotional issues facing the LGBTQIA community in the world today. False prejudice has blighted much of society's sensitivity to what is necessarily a human rights issue. Ignorance has compounded it. What if you, as a parent or a family member, are faced with this "coming out" issue? Are you aware what each term in the acronym LGBTQIA really means? Are you aware of the emotional and psychological damage you do to a loved one when you fail to understand, and/or reject, their perspective of love, sex,

and acceptance? Understanding the implications of the above, the author after months of research has crafted these stories based on actual conditions existing in different countries of the world. You will meet Rocky in "(A)sexual Story," the psychiatrist Dr. Timothy in "Fix It," and Jasmine and Randy in "Human Work of Art." You will learn about DSD--Dysfunction Sexual Disorder--in "Isher" and why Bangkok is called the "Kathoe Paradise." You will shudder at the public repression of gays by ISIS in Raqqa, and learn about the dichotomy that exists in Iran. You will revel at the miracle you witness in "Topanga," cry for Sameera in "The Girls' Bathroom," and be educated by "The Gay Truth." And in all these stories and many more, you will learn that every human being suffers like you do and rejoices as you do, and deserves the right to choose how he or she should live their life, however different we perceive them to be.

W. E. B. Du Bois was a public intellectual, sociologist, and activist on behalf of the African American community. He profoundly shaped black political culture in the United States through his founding role in the NAACP, as well as internationally through the Pan-African movement. Du Bois's sociological and historical research on African-American communities and culture broke ground in many areas, including the history of the post-Civil War Reconstruction period. Du Bois was also a prolific author of novels, autobiographical accounts, innumerable editorials and journalistic pieces, and several works of history. One of the most neglected and obscure books by W. E. B. Du Bois, In Battle for Peace frankly documents Du Bois's experiences following his attempts to mobilize Americans against the emerging conflict between the United States and the Soviet Union. A victim of McCarthyism, Du Bois endured a humiliating trial-he was later acquitted-and faced political persecution for over a decade. Part autobiography and part political statement, In Battle for Peace remains today a powerful analysis of race in America. With a series

introduction by editor Henry Louis Gates, Jr., and an introduction by Manning Marable, this edition is essential for anyone interested in African American history.

A Psychological Analysis of Adolph Hitler--His Life and Legend (1943), is a psychoanalytical report of Hitler prepared for the Office of Strategic Services (OSS), predecessor to the CIA, by American psychologist Walter C. Langer in collaboration with three other psychologists--Professor Henry A. Murray, Dr. Ernst Kris, and Dr. Bertram D. Lewin. In writing this analysis, Langer and his colleagues interviewed people who knew Hitler personally and drew upon over 1000 pages of research from a document known as *The Hitler Source Book*. The report made several accurate predictions about Hitler's future, such as an assassination attempt on him by the German aristocracy and his suicide in the event of defeat. This psychological profile of Hitler was the forerunner of the field of profiling foreign political leaders by the CIA, including Soviet Premier Nikita Khrushchev, Chinese leaders Mao Zedong and Deng Xiaoping, and Cuban leader Fidel Castro (also available from Cosimo Reports.)

This handbook is designed to aid electronic warfare and radar systems engineers in making general estimations regarding capabilities of systems. It is

not intended as a detailed designer's guide, due to space limitations. Portions of the handbook and future changes will be posted on an internet link. Now the standardisation work of DAB (Digital Audio Broadcasting) system is finished many broadcast organisations, network providers and receiver manufacturers in European countries and outside of Europe (for example Canada and the Far East) will be installing DAB broadcast services as pilot projects or public services. In addition some value added services (data and video services) are under development or have already started as pilot projects. The new digital broadcast system DAB distinguishes itself from existing conventional broadcast systems, and the various new international standards and related documents (from ITU-R, ISO/IEC, ETSI, EBU, EUREKA147, and others) are not readily available and are difficult to read for users. Therefore it is essential that a well structured technical handbook should be available. The Second Edition of Digital Audio Broadcasting has been fully updated with new sections and chapters added to reflect all the latest developments and advances. Digital Audio Broadcasting: Provides a fully updated comprehensive overview of DAB Covers international standards, applications and other technical issues Combines the expertise of leading researchers in the field of DAB Now covers such new areas as: IP-Tunneling via

DAB; Electronic Programme Guide for DAB; and Metadata A comprehensive overview of DAB specifically written for planning and system engineers, developers for professional and domestic equipment manufacturers, service providers, as well as postgraduate students and lecturers in communications technology.

An Introduction to Aramaic

Magnetic Properties of Transition Metal Compounds

Advances in engineering precision have tracked with technological progress for hundreds of years. Over the last few decades, precision engineering has been the specific focus of research on an

international scale. The outcome of this effort has been the establishment of a broad range of engineering principles and techniques that form the foundation of precision design. Today's precision manufacturing machines and measuring instruments represent highly specialised processes that combine deterministic engineering with metrology. Spanning a broad range of technology applications, precision engineering principles frequently bring together scientific ideas drawn from mechanics, materials, optics, electronics, control, thermo-mechanics, dynamics, and software engineering. This book provides a collection of these principles in a single source. Each topic is presented at a level suitable for both undergraduate students and precision engineers in the field. Also included is a wealth of references and example problems to consolidate ideas, and help guide the interested reader to more advanced literature on specific implementations.

This is a comprehensive tutorial on the emerging technology of free-space laser communications (FSLC). The book offers an all-inclusive source of information on the basics of FSLC, and a review of state-of-the-art technologies. Coverage includes atmospheric effects for laser propagation and FSLC systems performance and design. Free-Space Laser Communications is a valuable resource for engineers, scientists and students interested in laser communication systems designed for the

atmospheric optical channel.

This is a textbook of what is often called magnetochemistry. We take the point of view that magnetic phenomena are interesting because of what they tell us about chemical systems. Yet, we believe it is no longer tenable to write only about such subjects as distinguishing stereochemistry from the measurement of a magnetic susceptibility over a restricted temperature region; that is, paramagnetism is so well-understood that little remains to explore which is of fundamental interest.

The major purpose of this book is to direct chemists to some of the recent work of physicists, and in particular to a lengthy exposition of magnetic ordering phenomena. Chemists have long been interested in magnetic interactions in

clusters, but many have shied away from long-range ordering phenomena. Now however more people are investigating magnetic behavior at temperatures in the liquid helium region, where ordering phenomena can scarcely be avoided. The emphasis is on complexes of the iron-series ions, for this is where most of the recent work, both experimental and theoretical, has been done. The discussion therefore is limited to insulating crystals; the nature of magnetism in metals and such materials as semiconductors is sufficiently different that a discussion of these substances is beyond our purposes. The book is directed more at the practical experimentalist than at the theoretician.

Tendon ailments are a significant cause of morbidity among athletes of all levels and are increasing in prevalence. Their management is often empirical, and para-scientific, only looking at the biological aspects of tendon ailments. This book conveys a comprehensive and concise body of knowledge on the management of tendon problems in sportspeople with practical details of clinical protocols. Tendon Injuries: Basic Science and Clinical Medicine is specifically dedicated to the clinical aspects of tendinopathy and provides the required knowledge and scientific basis for the sports medicine practitioner, orthopedic specialist and student facing upper and lower limb tendon ailments in athletes. A comprehensive review of tendon disorders is given and modern criteria of management outlined to form the basis of effective clinical management of this group of patients.

Today, Global Positioning System (GPS) has taken a significant place in human life with wide-scale applications. It is a multi-use, space-based radio-navigation system, embracing defense and security, civil, commercial, and scientific research needs. Taking into account the importance of the system, it has been suggested to present current advances of GPS with attention focused on vital aspects of technology. This book provides a general description of GPS, GNSS,

and GLONASS with reference to the improvement of characteristics of the segments, including software applications and the equipment itself containing GPS. The book also provides information on application areas. Equally, a number of common shortcomings and errors are described, and elimination and minimization of such consequences are demonstrated.

In our current context, given what we are learning about the high cost of failed moral leadership, it is more urgent than ever to seek and study models for the formation of exceptional leaders. Readers who missed Burton Nelson and Geoffrey Kelly's groundbreaking, insightful, painstakingly researched, and substantially encouraging study of what Dietrich Bonhoeffer teaches us about moral leadership when it was first published will be copiously rewarded by studying it now. This is a book to read for yourself and recommend to students, congregants, colleagues, and others whom you would like to draw into profound and fruitful meditation on Christian moral leadership.
