Discovering Success With One Life Changing Sentence

This portrait of social change in the North China plain depicts how the world of the Chinese peasant evolved during an era of war and how it in turn shaped the revolutionary process. The book is based on evidence gathered from archives and interviews with villagers and rural officials.

From his experience as an author and teacher, David Myers has concluded that students digest material more easily when it is presented in smaller chunks. Ask students whether they would prefer a 600-page book to be organized as fifteen 40-page chapters or as forty 15-page chapters and their answers will approach a consensus: students prefer shorter chapters. And research on learning strategies supports this preference: chunked material is more easily digested. Responding to student preference and learning research, Myers has created a modular version of his best-selling brief introductory text, Exploring Psychology, Exploring Psychology, Fifth Edition, in Modules reorganizes the 15 chapters of Exploring Psychology, Fifth Edition into 40 short chapters, or modules. The modular organization offers instructors more freedom to pick and choose from a smorgasbord of topics. Instead of deciding whether to assign the whole chapter on consciousness, instructors can simply assign the module on sleep and dreams, the module on hypnosis, and/or the module on drugs and behavior. Given that each module stands alone and is not dependent upon the content found in other modules, instructors can also choose to cover the modules in any order they please. Featuring the latest research and teaching innovations, Myers' new text reflects the author's continuing drive to discover the most effective way to communicate psychology's major ideas to an uninitiated audience. Note: Exploring Psychology, Fifth Edition, in Modules is now available (saleable) in two different saleable versions: a. A hardcover, spiralbound text [similar in structure to the spiralbound Myers in Modules] b. A perfectbound paperback text The features that have made David Myers' introductory psychology textbooks such phenomenal successes (compelling narrative, critical thinking theme, superior design) are all present in Exploring Psychology, Fifth Edition, in Modules. The way those hallmark features are presented is different. This is NOT a brief version of Psychology; Myers in Modules, Sixth Edition. Rather, this new text is a Modularized version of Exploring Psychology, Fifth Edition. Therefore, it enjoys all of the hallmark features of Exploring Psychology, Fifth Edition: SQ3R pedagogical system, terrific writing, and briefer coverage of key topics. It is, in fact, the same writing/content as can be found in Exploring Psychology, Fifth Edition, just with a different organization.

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCCampus website.

For the serious student of life here in the Earth School, this work may help you push your own boundaries of beliefs, perceptions and assumptions and lead you into a deeper course of inquiry within the heart and soul of you. It's in large part why you are here. So, I've gathered together three works that explore different aspects of consciousness with a small "c" and along with painting a different perspective of the big "C" in terms of the Cosmic Consciousness, Source or God, however it is you might like to reference it. It is my contribution towards helping to create that little instruction book we all could use. It is my greatest hope that you might find something of value, something to make you think or something that might give you pause to realize you are so much more than you've been taught by conventional religion and various courses of earliest teachings from elementary school and beyond.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology’s rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution—and the authors’ excitement about it.
