is beneficial to
forensic experts.

Differences in the leg

to establish individual identity. Analysis of damage to the lower limb can be used to reconstruct antemortem, perimortem, and postmortem trauma. As a forensic anthropologist, I analyze cases involving decomposed, burned,

Many of the corpses I

Occasionally, I
receive nothing but

Though the leg and foot contain much that is useful in forensic analysis, before this publication, investigators faced a twofold problem.

Little research that focused on the lower extremity was available in the literature, and the existing research was published in diverse sources, making its location and synthesis a daunting task.
