Milestones for adult basic education include: It was first federally funded in 1964. The National Literacy Act passed in 1991. The Workforce Investment Act (WIA) of 1998 was enacted. The field then remained relatively static until 2014 when: a new version of the GED® test launched, new content standards were developed, new data on adult cognitive skills were released, and the Workforce Innovation and Opportunity Act (WIOA), with its laser focus on employment and training, was enacted. This volume reviews where the field is in relation to these turning points and discusses where it could go. Taking up critical discussions of the many recent and influential changes as well as topics of enduring interest, this volume will be valuable to practitioners, researchers, and policy makers. This is the 155th volume of the Jossey Bass series New Directions for Adult and Continuing Education. Noted for its depth of coverage, it explores issues of common interest to instructors, administrators, counselors, and policymakers in a broad range of education settings, such as colleges and universities, extension programs, businesses, libraries, and museums.

Provides practical guidance on the latest quality assurance and accelerated stress test methods for improved long-term performance prediction of PV modules This book has been written from a historical perspective to guide readers through how the PV industry learned what the failure and degradation modes of PV modules were, how accelerated tests were developed to cause the same failures and degradations in the laboratory, and then how these tests were used as tools to guide the design and fabrication of reliable and long-life modules. Photovoltaic Module Reliability starts with a brief history of photovoltaics, discussing some of the different types of materials and devices used for commercial solar cells. It then goes on to offer chapters on: Module Failure Modes; Development of Accelerated Stress Tests; Qualification Testing; and Failure Analysis Tools. Next, it examines the use of quality management systems to manufacture PV modules. Subsequent chapters cover the PVQAT Effort; the Conformity Assessment and IECRE; and Predicting PV Module Service Life. The book finishes with a look at what the future holds for PV. A comprehensive treatment of current photovoltaic (PV) technology reliability and necessary improvement to become a significant part of the electric utility supply system Well documented with experimental and practical cases throughout, enhancing relevance to both scientific community and industry Timely contribution to the harmonization of methodological aspects of PV reliability evaluation with test procedures implemented to certify PV module quality Written by a leading international authority in PV module reliability Photovoltaic Module Reliability is an excellent book for anyone interested in PV module reliability, including those working directly on PV module and system reliability and preparing to purchase modules for deployment.

This book critically evaluates the current copyright law system in a digital environment from a comparative perspective. Since many developing countries modelled their copyright laws on more advanced jurisdictions, they have not benefitted from such a law as much as intended due to their inherently embedded social economic conditions. Moreover, the copyright law system has been under constant challenges from rapidly developing digital technology and the Internet. All in all, there is a pressing need for developing countries to reevaluate their copyright law in light of their national needs, the developmental stage of their economy, their culture and tradition, and their legal system. The book poses the question of whether copyright law should be reformed to fulfill its fundamental purpose of serving education and research that are in the public interest in the digital era? It examines whether the legal frameworks adequately address developing countries' educational and research requirements in view of the opportunities and restrictions posed by electronic communication media. Further, it provides a comprehensive study that addresses the various critical issues relevant to the reform of the copyright law system and offers recommendations for developing countries to revamp their copyright law system to better serve their education and research sector.

What should language and writing teachers do about giving students written corrective feedback? This book surveys theory, research, and practice on the important and sometimes controversial issue of written corrective feedback, also known as "error/grammar correction," and its impact on second language acquisition and second language writing development. Offering state-of-the-art treatment of a topic that is highly relevant to both researchers and practitioners, it critically analyzes and synthesizes several parallel and complementary strands of research — work on error/feedback (both oral and written) in SLA and studies of the impact of error correction in writing/composition courses — and addresses practical applications. Drawing from both second language acquisition and writing/composition literature, this volume is the first to intentionally connect these two separate but important lines of inquiry.

The remarkable system of Vedic mathematics was created after careful study of ancient Sanskrit texts early last century. The Vedic system with its direct, easy and flexible approach forms a complete system of mental mathematics (though the methods can also be written down) and brings out the naturally coherent and unified structure of mathematics. Many of the features and techniques of this unique system are truly amazing in their efficiency and originality. Being a mental system, Vedic Mathematics encourages creativity and innovation. Mental mathematics increases mental agility, improves memory, the ability to hold ideas in the mind and promotes confidence, as well as being of great practical use. This course consists of three textbooks an Answer Book and a Teacher's Guide. The course is aimed at 11-14 year old pupils though some of it is very suitable for children from 8 years. Vedic Mathematics is being taught in many schools world-wide with great success: many top mathematics prizes have been won by students of this system.

In his 1997 State of the Union address, President Clinton announced a federal initiative to develop tests of 4th-grade reading and 8th-grade mathematics that would provide reliable information about student performance at two key points in their educational careers. According to the U.S. Department of Education, the Voluntary National Tests (VNT) would create a catalyst for continued school improvement by focusing parental and community-wide attention on achievement and would become new tools to hold school systems accountable for their students' performance. The National Assessment Governing Board (NAGB) has responsibility for development of the VNT. Congress recognized that a testing program of the scale and magnitude of the VNT initiative raises many important technical questions and requires quality control throughout development and implementation. In P.L. 105-78, Congress called on the National Research Council (NRC) to evaluate a series of technical issues pertaining to the validity of test items, the validity of proposed links between the VNT and the National Assessment of Educational Progress (NAEP), plans for the accommodation and

inclusion of students with disabilities and English-language learners, plans for reporting test information to parents and the public, and potential uses of the tests. This report covers phase 1 of the evaluation (November 1997-July 1998) and focuses on three principal issues: test specifications and frameworks; preliminary evidence of the quality of test items; and plans for the pilot and field test studies, for inclusion and accommodation, and for reporting VNT results.

Promoting Assessment as Learning sets out to re-examine the relationship between assessment and learning in the classroom. It argues that assessment is an important part of pupil learning, and needs to be understood by pupils in order to help them make judgements about their own progress. This timely book explores the theories of learning and assessment within the context of national tests and also through the theme of self-assessment. It offers practical approaches to help teachers translate national policy into meaningful classroom practice, and suggests ways to help pupils develop their own assessment skills through a process of consolidation, reflection and revision. This book will appeal to new and practising primary school teachers and headteachers and those on in-service courses. It will also be of interest to students on initial teacher training and higher degree courses.

Documents the development of the Cambridge ESOL Certificates in English Language Skills (CELS), a suite of modular examinations first offered in 2002. As a context for how CELS was conceived, developed, constructed, validated and managed, the book traces the history of exams which have influenced CELS. The Royal Society of Arts (RSA), later UCLES (University of Cambridge Local Examinations Syndicate) Communicative Use of English as a Foreign Language examinations (CUEFL) was one such influence, as were the Certificates in Communication Skills in English (CCSE), these exams being a development of the CUEFL. The University of Oxford Delegacy of Local Examinations (UODLE) examinations, taken over by UCLES in 1995, were a further influence on CELS. UODLE itself had worked in partnership with the Association of Recognised Language Schools (ARELS) Examinations Trust, the Oxford EFL reading and writing exams for many years offered in tandem with the ARELS Oral English exams.
