Research and publications on the potato crop have burgeoned since the first edition of this book was published in 1978. However, the warm reception of the first edition suggested that it had a useful part to play in promoting the scientific basis for understanding and improving the yield and quality of the crop. Since the first edition was out of print and a second reprint would not have taken into account the contributions made by research over the intervening years, it became obvious that a complete revision was necessary. There was, in particular, a need to take account of the rapid extension of interest in the crop into climates and farming systems with which it has not been traditionally associated. Those involved with the crop will be sadly aware that a number of contributors to the first edition are no longer with us. Their contribution to our knowledge of the crop will however be a permanent legacy of their achievement. I would like to thank all those who have contributed to the book for their willingness to cooperate in the difficult task of bringing their particular subject up to date. This is even more noteworthy for the pressure of time appears to be almost an order of magnitude higher than it was when the first edition was tackled.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Alaska pollock is everywhere. If you 're eating fish but you don 't know what kind it is, it 's almost certainly pollock. Prized for its generic fish taste, pollock masquerades as crab meat in California rolls and seafood salads, and it feeds millions as fish sticks in school cafeterias and Filet-O-Fish sandwiches at McDonald 's. That ubiquity has made pollock the most lucrative fish harvest in America—the fishery in the United States alone has an annual value of over one billion dollars. But even as the money rolls in, pollock is in trouble: in the last few years, the pollock population has declined by more than half, and

some scientists are predicting the fishery ' s eventual collapse. In Billion-Dollar Fish, Kevin M. Bailey combines his years of firsthand pollock research with a remarkable talent for storytelling to offer the first natural history of Alaska pollock. Crucial to understanding the pollock fishery, he shows, is recognizing what aspects of its natural history make pollock so very desirable to fish, while at the same time making it resilient, yet highly vulnerable to overfishing. Bailey delves into the science, politics, and economics surrounding Alaska pollock in the Bering Sea, detailing the development of the fishery, the various political machinations that have led to its current management, and, perhaps most important, its impending demise. He approaches his subject from multiple angles, bringing in the perspectives of fishermen, politicians, environmentalists, and biologists, and drawing on revealing interviews with players who range from Greenpeace activists to fishing industry lawyers. Seamlessly weaving the biology and ecology of pollock with the history and politics of the fishery, as well as Bailey ' s own often raucous tales about life at sea, Billion-Dollar Fish is a book for every person interested in the troubled relationship between fish and humans, from the depths of the sea to the dinner plate.

This book systemically presents the latest research on renal fibrosis, covering all the major topics in the field, including the possible mechanisms, biomarkers, and strategies for prevention and treatment of chronic kidney disease (CKD). Due to its high prevalence, CKD represents a huge global economic and social burden. Irrespective of the initial causes, CKD progresses to end stage kidney disease (ESKD) due to renal fibrosis, which is characterized by glomerulosclerosis, tubule atrophy and atresia, and the excessive accumulation of extracellular matrix (ECM) in the kidney. Unfortunately, an estimated 1%-2% of the adult population living with CKD will need renal replacement therapy at some point as a result of ESKD. As such, strategies for preventing or slowing CKD progression to ESKD are of utmost importance, and studies aiming to understand the mechanisms of renal fibrosis have been the focus of intensive research. Recently, novel insights into the pathophysiological processes have furthered our understanding of the pathogenesis of renal fibrosis, and more importantly, promoted studies on the early diagnosis and treatment of CKD. This book draws lessons from the extensive, state-of-the-art research in this field, elaborating the new theories and new techniques to offer readers a detailed and comprehensive understanding of renal fibrosis and as well as inspiration for future research directions.

The Rice Genetics Collection of past symposia and other selected literature contains nearly 4,400 pages of searchable information on rice genetics and cytogenetics published by the IRRI and its partners since 1964. In addition to the five genetics symposia held at 5-year intervals since 1985, the collection contains classic publications that kicked off significant reporting on these subjects in the early 1960s. This collection is a comprehensive and historical documentation on

the subject of rice genetics, spanning 45 years of research and scholarly work. Published in 1985, Rice Genetics I contains 77 chapters from various contributors on topics dealing with rice genetic research, including systematics and evolution; varietal diversity and reproductive barriers; karyotype, polyploids, and trisomics; linkage maps; genetics of morphological and physiological traits; genetics of stress tolerance, disease resistance, insect resistance, and quantitative traits; cytoplasmic male sterility and fertility restoration; mutagenesis; tissue and cell culture; and genetic engineering.

Medicinal plants are a source of potential therapeutic compounds. Phytotherapy can give patients long term benefits with less or no side effects. This is the third volume of the series which features monographs on selected natural products used to treat diabetes and hypertension. This volume brings 7 chapters contributed by 22 researchers, that cover updates on the biochemistry of diabetes, information on anti-diabetic and antihypertensive properties of oil bearing plants, herbs, fruits and vegetables, medicinal plants from Asia, as well as the medicinal value of specific plants such as, star apple (*Chrysophyllum cainito*). In terms of therapeutic agents, two reviews in this volume focus on terpenoids and glucagon-like peptide – 1 are also included. Each review covers different plant species or medicinal agents where applicable, providing readers essential information about their role in the treatment of diabetes and hypertension. Both academic and professional pharmacologists as well as clinicians will find comprehensive information on a variety of therapeutic agents in this volume.

Issues in Surgery, Perioperative, and Anesthesia Research and Practice: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Surgery, Perioperative, and Anesthesia Research and Practice. The editors have built Issues in Surgery, Perioperative, and Anesthesia Research and Practice: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Surgery, Perioperative, and Anesthesia Research and Practice in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Surgery, Perioperative, and Anesthesia Research and Practice: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. The Architect's Handbook of Formulas, Tables, and Mathematical Calculations compiles a vast range of practical, concise formulas, tables, and calculation methods useful to improve the design process. It is a problem-solving and decision-making tool for the practicing architect and interior designer. The material included in this book gives you the answer to the many types of problems you face every day - those dealing with overall site and space planning, sizes of building components, material selection, finishes, construction assemblies, and building systems. In addition, you will find useful "rules of thumb" and basic reference data. The organization of this Handbook is based on how architects actually work through a project and make decisions - from establishing early programming needs, to making preliminary design and building system choices, to evaluating specific material selections. The tables and calculation methods selected are practical, proven reference information helpful for all phases of a job. To make the tables and formulas even more useful, step-by-step procedures for using them and easy-to-follow examples are included where appropriate.

This informative book equips early years teachers with the kind of practical knowledge needed to teach young children with dyslexia. The author tackles the topic accessibly and realistically, addressing a variety of classroom scenarios. Mark Kuhlberg challenges the orthodox interpretation of the relationship between the corporations which ran the Ontario's pulp and paper mills and the politicians at Queen's Park in the early twentieth century.

Chinese Herbal Medicine -- part of a larger healing system called Traditional Chinese Medicine (TCM), which also includes acupuncture, massage dietary advice and exercise. TCM is a popular method of treatment -- is actually called Chinese Drug Therapy in China because it uses a wide variety of substances and therapeutic modalities. Plant, animal and mineral substances are all included in the Materia Medica of Chinese Drug Therapy. The earliest uses date back at least 4000 years to the Shang dynasty. Characters representing medicinal substances have been found carved into oracular bone fragments. These were used diagnostically by the Wu Shaman of this time. The earliest materia Medica, the Sheng Nung Peng Tsao, recorded over 10,000 medicinal substances. While there seems to be an almost unlimited amount of medicinal substances, the most commonly used number around 200. Increased attention has begun being given to the

field due to several factors: The apparent success stories in many cases; The failure of Western medicine in many disorders; and Realisation on the part of Western researchers that successful drugs can be designed on the basis of Chinese herbal drugs. This new book presents the latest research in the field.
