You can be an excellent nurse in the clinical setting and still fail to prove that you are an excellent nurse if your documentation is inadequate. Having worked in a variety of inpatient and outpatient settings, I understand the obstacles nurses face. There's just not time, nor do nurses have the mental energy to meticulously document every little thing on top of the rest of their to-do list. That's part of why I became passionate about documentation education. It doesn't have to be an overwhelming, endless challenge to chart exhaustively in hopes that you enter enough data into the chart to defend yourself one day. Rather, leveraging the most critical data, knowing how to format notes and exactly what to say, and when to spend five minutes dumping information into the chart can be learned skills that make documentation faster, easier, and less stressful, while doing a better job of defending your actions.

Perfecting my own documentation and working to find concrete guidelines to share with my fellow nurses has become my passion. As I gained more knowledge and researched the dusty, forgotten corners of the internet for obscure evidence-based practice and case studies, becoming a subject matter expert on nursing documentation lit a spark because sharing this information helps empower nurses to understand exactly what should appear in their patient charts, where, when it should be entered, and how it should be phrased.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing. "If these are your concerns... I'll never get time to finish my nursing notes! Is it legal? Can I use white-out? Can't they make a better form than this? How can I record this family set-up quickly? Weren't computers made for clerks, not nurses? There has to be something wrong with documenting for funding. How do you record the pain level of someone who has a dementing illness? Who walks down critical pathways? What happens if a home health record gets lost? How can I document my client's spiritual concerns realistically? Will managed care affect what I write? Is there a culturally appropriate way to document? What is charting by exception? How did nurses document before NANDA?... then this book is for you." - Back cover.
