Educators and educational psychologists recognize transfer of learning as a significant issue in various fields of instruction. Transfer of learning cuts across various educational domains, curricula, and methods. This book shows that transfer of learning is not just a technique of learning or instruction, but a way of thinking and knowing.

This comparative analysis considers the differing approaches to important areas of law in England, France and Germany. In particular, constitutions, sources of law, rights against the state to prevent abuse of power, and rights of private individuals and organisations against each other in tort and contract are examined and compared, and the system of courts is also considered. Updated and revised, each sub-topic is introduced with the relevant material in the English system, allowing easy comparison and assimilation of the other systems. The text includes translations of relevant French and German codal material, and references to relevant cases from all of the jurisdictions. This new edition includes constitutional changes in France and the United Kingdom, in particular the new procedure for challenging existing legislation before the Conseil constitutionnel. It examines the consequences of the Lisbon Treaty, as well as other recent codal and legislative changes. Comprehensive and topical, the text explores a wide variety of new case law on issues such as: preventive detention; the use of evidence obtained by torture; the balance between suppression of terrorism and personal freedom; the internet; email monitoring; artificial reproductive techniques; use of global positioning systems (GPSs), deoxyribonucleic acid (DNA) and closed-circuit television (CCTV); the wearing of religious clothing (such as the headscarf) and symbols (such as the cross); circumcision; methods of crowd control; the prevention of human trafficking; the preservation of privacy, especially for celebrities; and the legality of pre-nuptial agreements and success fees for lawyers. Designed for students on comparative law courses, this textbook will also prove valuable to students who are familiar with English law, but require a readily comprehensible introduction to French or German law.

A lavishly illustrated, full-color companion to Scott Westerfeld's New York Times bestselling Leviathan trilogy. A must-have for any fan of Scott Westerfeld's Leviathan trilogy, The Manual of Aeronautics is an illustrated guide to the inner workings of the Darwinist and Clanker powers. This book offers a rich insight into the law of torts and cognate fileds, and will be of broad interest to those working in legal and moral

philosophy. It has contributions from all over the world and represents the state-of-the art in tort theory.

This book develops a theory of tort law that integrates deontic and consequential approaches by applying justificational analysis to identify the factors, circumstances, and values that shape tort law. Drawing on Kantian and Rawlsian philosophy, and on the insights of game theorist Ken Binmore, this book refocuses tort law on a single theory of responsibility that explains and justifies the broad range of tort doctrine and concepts. Under this theory, tort law asks people to appropriately incorporate the well-being of others into the decisions they make, explains when that duty applies, and explains the scope and limits of that duty. The theory also incorporates a theory of the evolutionary development of social values that people use, and ought to use, in meeting that duty and explains how decision-making from behind the veil of ignorance allows us to evaluate the is in light of the ought.

The foundations of tort law in European legal systems differ considerably. A group of tort law experts, the "European Group on Tort Law", systematically researches the most fundamental questions underlying the various tort law systems. Their work is contained in this series of books, which seeks a common law of Europe without the need to lay these principles down in formal legal texts, such as a European civil code.

Instead of presenting the standard theoretical treatments that underlie the various numerical methods used by scientists and engineers, Using R for Numerical Analysis in Science and Engineering shows how to use R and its add-on packages to obtain numerical solutions to the complex mathematical problems commonly faced by scientists and engineers. This practical guide to the capabilities of R demonstrates Monte Carlo, stochastic, deterministic, and other numerical methods through an abundance of worked examples and code, covering the solution of systems of linear algebraic equations and nonlinear equations as well as ordinary differential equations and partial differential equations. It not only shows how to use R's powerful graphic tools to construct the types of plots most useful in scientific and engineering work, but also: Explains how to statistically analyze and fit data to linear and nonlinear models Explores numerical differentiation, integration, and optimization Describes how to find eigenvalues and eigenfunctions Discusses interpolation and curve fitting Considers the analysis of time series Using R for Numerical Analysis in Science and Engineering provides a solid introduction to the most useful numerical methods for scientific and engineering data analysis using R.

When potential litigants first approach a lawyer they are generally interested in finding out one thing only: are they likely to be able to win damages or any other kind of remedy and what kind of quantum of damages are they likely to receive? It becomes the lawyers main task to try to argue for a remedy and to persuade the court that the plaintiff has a good cause of action. Textbooks about contract and tort frequently treat damages and other remedies as an after thought when in fact it is the issue of remedies which is a constant and an ever present consideration for the plaintiff and his or her lawyer. This new book, containing contributions from many of the UKs leading specialists brings to the fore a range of issues which are of topical interest to litigators and to teachers of law. In some instances the issues are currently the subject of reform proposals and these essays usefully highlight the principle issues facing the reformers and the objections which have been raised by those opposed to reform. In addition four of the essays tackle a strand of tort law which is of rapidly growing importance - the area of professional negligence. The contributors are among the best known writers in this field and their essays combine practical and academic perspectives which usefully highlight contemporary trends in professional negligence litigation. The first chapter in the book also offers a unique and controversial overview of tort law in the UK by Professor Patrick Atiyah who argues for a complete rethink of the system of personal injuries litigation in the UK, starting with its abolition and replacement by a vastly expanded system of private insurance.

MacGilvray argues that we should shift our attention away from the problem of identifying uncontroversial public ends in the present and toward the problem of evaluating potentially controversial public ends through collective inquiry over time.

This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America.

In this collection of essays, which range widely over tort law, legal theory and legal history, distinguished academics and members of the judiciary pay tribute to the late John Fleming, one of the most important and influential writers on the law.

Our society is struggling with what Pope Benedict has called "profound crisis of faith that has affected many people." In response, the Holy Father has called us all to a Year of Faith from October 2012 to November 2013. We see the signs all around us: the demand for science to prove everything before we can believe it, the role of media and celebrities who deny the existence of God and denounce the role of the Church, and the ease in which we can all isolate God and faith into only one part of our life. In a follow-up to his best selling St. Paul Bible Study for Catholics during the year of St. Paul, Fr. Mitch Pacwa once again leads Catholics to a deeper understanding of Pope Benedict's call to action for the year. Perfect for individual or group study, this book is a wonderful guide to experiencing a conversion, growing in faith, and following Jesus Christ more closely. It shows us how to integrate every component of our life – relationships, morality, work, recreation, and all – into a meaningful whole. Make the most of Pope Benedict's Year of Faith, walking hand in hand with Fr. Pacwa as he guides you through the beauty and insights of Scripture in relationship to your everyday life.

As in the days following Skylab, solar physics came to the end of an era when the So lar Maximum Mission re-entered the earth's atmosphere in December 1989. The 1980s had been a pioneering decade not only in space- and ground-based studies of the solar atmosphere (Solar Maximum Mission, Hinotori, VLA, Big Bear, Nanc;ay, etc.) but also in solar-terrestrial relations (ISEE, AMPTE), and solar interior neutrino and helioseismol ogy studies. The pace of development in related areas of theory (nuclear, atomic, MHD, beam-plasma) has been equally impressive. All of these raised tantalizing further questions about the structure and dynamics of the Sun as the prototypical and best observed star. This Advanced Study Institute was timed at a pivotal point between that decade and the realisation of Yohkoh, Ulysses, SOHO, GRANAT, Coronas, and new ground-based optical facilities such as LEST and GONG, so as to teach and inspire the up and coming young solar researchers of the 1990s. The topics, lecturers, and students were all chosen with this goal in mind, and the result seems to have been highly successful by all reports.

Philosophical Foundations of the Law of Torts

On what basis does tort law hold us responsible to those who suffer as a result of our carelessness? Why, when we breach our contracts, should we make good the losses of those with whom we contracted? In what sense are our torts and our breaches of contract 'wrongs'? These two branches of private law have for centuries provided philosophers and jurists with grounds for puzzlement. This book provides an outline of, and intervention in, contemporary jurisprudential debates about the natureand foundation of liability in private law. After outlining the realm of the philosophy of private law, the book divides into two. Part I examines the various components of liability responsibility in private law, including the notions of basic responsibility, conduct, causation and wrongfulness. Part II considers arguments purporting to show that private law does and should embody a conception of either distributive or corrective justice or some combination of the two. Throughout the booka number of distinctions – between conceptual and normative argument, between jurisprudential 'theory' and private law 'practice', between legal obligation and moral obligation – are analyzed, the aim being to give students an informed grasp of both the limits and possibilities of the philosophy of private law.

The European Group on Tort Law presents the results of its extensive research project, the Principles of European Tort Law. They were drafted on the basis of several comparative studies on the most fundamental questions of tortious liability and the law of damages. The Principles are not a mere restatement of the common core of tort law in Europe, but rather a proposal for a comprehensive system of tortious liability for the future, though necessarily linked to existing regimes. They are meant to stimulate discussion both among academics and practitioners and could serve as guidelines for national legislatures, thereby fostering gradual harmonization. The text of the Principles, which is offered in English and several other languages, is accompanied by commentaries on the various parts elaborating their intended meaning and interplay.

This book offers four stimulating views on European integration and law. Four experts in the fields of European law, private law, criminal law and company law discuss to what extent European integration has affected their respective fields of interest. In addition to this, they offer their views on the future of European integration. This makes this book indispensable to anyone interested in the European Union and its all pervasive influence on national law. The contributors are Deirdre Curtin, Jan Smits, Andr Klip and Joseph A. McCahery. This volume marks the 25th anniversary of the Faculty of Law of Maastricht University. In these 25 years, the Maastricht Faculty of Law has become a forerunner in European legal education and research. It offers the European Law School program and hosts the Ius Commune Research School.

Understanding the Social Change Model of Leadership Development

High School Comprehension Questions and Vocabulary

The Year of Faith

When accidents occur and people suffer injuries, who ought to bear the loss? Tort law offers a complex set of rules to answer this que philosophers have offered little by way of analysis of these rules. In eight essays commissioned for this volume, leading legal theorists e philosophical foundations of tort law. Amongst the questions they address are the following: how are the notions at the core of tort pr responsibility, fault, negligence, due care, and duty to repair) to be understood? Is an explanation based on a conception of justice feasi concerns of distributive and corrective justice related? What amounts to an adequate explanation of tort law? This collection will be of professionals and advanced students working in philosophy of law, social theory, political theory, and law, as well as anyone seeking a be understanding of tort law.
