An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

*In 1986 Frank Davis wrote his first poem. His thoughts were of our attitudes toward the Indians and how we infringed on their territories and lives. Most movies depict the Indian as bad and we were led to believe they were our enemies. Reading more realistic books gave him a different view. In many instances the Indians were friendly and helped pioneers in stress. In two of his poems he brings out his own version of their real struggles of the invasion of the white man, to be out numbered and controlled in a no-win situation. Then his thoughts of his childhood and memories of growing up, his slant on life and visions in a folklore atmosphere. His love and feelings of life and mother nature, to read his poetry will acquaint us with the Inner person and will remind us of ourselves in many ways. His first twenty poems were recorded and a friend listened to that first tape and exclaimed, 'Frank, it's just like being there,' hence the name Just Like Being There. In 1993 he married his best friend and was inspired to try writing lyrics to show his true colors to her. She is his biggest fan and finally someone to add rhythm to his life. Maybe some time in the future, one or two of his lyrics will be put to music.*

In recent decades, five to ten times as many persons have turned out for the Olympic flame relay as have watched Olympic sports contests live. Flame Relays and the Struggle for the Olympic Movement: Bearing Light, the first anthropological analysis of the contemporary torch relay, exposes and interprets the transformation of the ritual across a 25-year period, from Los Angeles 1984 through the IOC's 2009 announcement that, in the aftermath of the politically contentious Beijing performance, there will be no more global relays. This volume offers a rare case study of continuity and change in a leading transnational and trans-cultural ritual form. Through data publicly revealed for the first time, the reader is carried fully backstage and into the conflicts and negotiations among Olympic organizing committees, the Greek Olympic movement, national governments, and transnational actors like the IOC, commercial sponsors, and operations management firms. Readers will come to know the leading flame relay authorities and practitioners, gaining a deeper understanding of the Olympic managerial revolution with its characteristic 'world's best practice' language. Analysis of the transnational flow of Olympic operations management offers important corrections to much existing globalization theory by demonstrating both how powerful and how culturally and politically parochial world's best practices can turn out to be. The dialectic between the cultural performance genres of ritual and spectacle provides a further intellectual architecture for these studies posing the question of whether the Olympic Movement will be able to survive the successes of the Olympic Sports Industry. This book was previously published as a special issue of Sport in Society.

You've experienced the shiny, point-and-click surface of your Linux computer—now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell. Along the way you'll learn the timeless skills handed down by generations of gray-bearded, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to: \* Create and delete files, directories, and symlinks \* Administer your system, including networking, package installation, and process management \* Use standard input and output, redirection, and pipelines \* Edit files with Vi, the world's most popular text editor \* Write shell scripts to automate common or boring tasks \* Slice and dice text files with cut, paste, grep, patch, and sed Once you overcome your initial "shell shock," you'll find that the command line is a natural and expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust. A featured resource in the Linux Foundation's "Evolution of a SysAdmin"
