Biportal endoscopic spine surgery has been rapidly developed recently, and Unilateral biportal endoscopic spine (UBE) surgery may be new stream in spine surgery. UBE surgery is a new concept of surgery that is different from the existing one portal endoscopic surgery, and has the advantage of being familiar with spinal surgeons as the surgical anatomy is similar to a general surgical method, and the learning curve period is short. The 4mm diameter endoscope provides a very clear image, and it can be safely operated under magnified and clear endoscopic view. It is also available to use general surgical instruments in addition to endoscopic surgical instruments during UBE approaches. Currently it is being performed not only in the lumbar spine, but also in the cervical and thoracic spine. In addition, simple laminectomy, disc removal, and spinal fusion are possible. With the advancement of UBE surgery, spinal surgeons from various countries have been performing UBE in recent years, and it is gradually spreading to the world. This will be the first book summarizing from basic to advanced techniques with abundant illustrations and video aid for easy

understanding. .

In this volume is presented the proceedings of a NATO
Advanced Study Institute (ASI) on the theme of
Electromagnetic Modelling and Measurements for
Analysis and Synthesis Problems. The ASI was held at 11
Ciocco, Castelvecchio Pascoli, Tuscany, Italy, August
10th - 21st, 1987. It has been my good fortune to act as
co-director of two of Jozef's previous ASIs, and so I am
well acquainted with the JKS format for ASIs. As
participants will realise, I did not attend this ASI, and so I
only have a partial appreciation of the programme. In
particular it has not been possible to include transcripts
of any panel discussions which may have taken place.
Readers may recall that such transcripts have formed a
most interesting and useful part of previous ASI
proceedings edited by Jozef Skwirzynski, and helped to
convey the spirit of the meetings. Unfortunately it has
proved impossible to locate the tapes, despite the best
efforts of Jozef's assistant, Barry Stuart. A further
dificulty has arisen through the untimely death of Jozef's
former deputy and colleague at GEC Research, Ed

Pacello, who assisted Jozef with the organisation of the precursor of this ASI. The following is taken from original material relating to the aims of the Advanced Study Institute: "PURPOSE OF THE INSTITUTE This Institute is concerned with computer modelling and with experimental measurements as two complementary tools for both analysis and synthesis of electromagnetics (EM), infra-red (IR) and optical problems.
Ideal for any IT professional who uses Cisco technologies on a daily basis, or anyone who is preparing for their Cisco Certified Network Professional (CCNP) certification. The topics covered will be more in depth than other introductory-level books of similar topics, and will span from layer 2 technologies such as switching, STP, etherchannel, and trunking, all the way to application layer security topics such as firewall inspection and intrusion prevention systems. Items being covered in the middle will include all the common routing protocols RIP, EIGRP, OSPF and BGP. Many other routing technologies and WAN protocols will be covered including Multicast, MPLS, Cable and DSL. Coverage of redundancy protocols such as HSRP, VRRP and GLBP will be examined. A thorough coverage of convergence topics such as how voice, video and wireless traffic affect the network, and what can be done to improve the effects such as QOS and queuing. This book is a key component for any IT professional preparing for their CCNP certification, as it covers in-depth the topics tested on in all four CCNP exams: Building Scalable Cisco Internetworks (642-901) Building Cisco Multilayer Switched Networks (642-812) Implementing Secure Converged Wide Area Networks (642-825) Optimizing Converged Cisco Networks (642-485) CD includes the exclusive Sybex Test Engine, with two Practice CCNP

exams, as well as author code files. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

Master SAP scripts, Smartforms, and data migration with hands-on exercises. The information provided in this book will help you decode the complexities and intricacies of SAP ABAP programming. Pro SAP Scripts, Smartforms, and Data Migration begins by describing the components of a SAP script: forms, styles, and standard texts. It then shows you how an ABAP program can invoke a SAP script form and send data to the form to provide output. In this IBM® Redbooks® publication, we give an overview of different data management topics related to a typical SAP® data center. The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally, we discuss data archiving using IBM DB2® CommonStore for SAP, and discuss high

availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases. This book helps individuals that operate an SAP environment to devise a strategy for a sound and comprehensive data backup solution using the IBM Tivoli Storage Management product family.
