The SDI Open Water Student Manual is the text-book literary assistant to the SDI Open Water Diver certification course. By signing up for this course, the perspective student has taken the first step to becoming a certified scuba diver. This manual details diving history, oceanography, marine life, the physics and physiology behind the sport of diving, scuba diving equipment, as well as an in-depth training of basic scuba diving skills and techniques.

In 2007, one of a team of expert cave divers died in strange circumstances while exploring Bell Island's flooded Iron-ore Mine in Newfoundland, Canada. Joe Steffen's death was a terrible shock for his team-mates and an unexpected and unwelcome tragedy for his friends and family. Although the expedition continued until its scheduled conclusion, and successfully placed two kilometres of permanent guideline in the mine's network of passageways and galleries, Steffen's death closed the mine to further exploration and the possibility of guided dives for almost a decade. In his new book, best-selling author Steve Lewis tells the story of Steffen's death and its aftermath, from his perspective as expedition leader and Steffen's roommate during their time together in Newfoundland. He writes honestly about the profound effect his friend's death had on him, how it wove itself into his life - both underwater and above - until finally, somewhere on the road to Spain's Santiago de Compostela, how he rid himself of the heartache and guilt associated with it. He says: "I needed to write this book because it turns out the story of Bell Island is more important than four shipwrecks, several square kilometres of flooded mine, and a dead friend. What started out as one local man's quest to put Bell Island on every diver's bucket list, became much more complex than anyone - certainly any of the people involved in that quest - would have guessed."

Allison Darling, former foster child, now a stay-at-home mom of three, desperately wants to fit in with the organic latte drinking, hundred-dollar-yoga-pants-wearing moms who run Monrovia, her charming seaside village. Constantly feeling like an outsider, Allison dreams of more for her children. When the Glamour Girls, a soap-selling company run by the most charismatic and powerful women in town, recruits Allison, she jumps at the invitation. The Glamour Girls have a hand in everything in Monrovia, from bake sales to business deals. This is what Allison's wanted her whole life—to be liked. To be popular. To belong. After Allison's estranged mother passes away, she learns her family's heartbreaking legacy and the secret Allison's been fighting to suppress all her life emerges: she's a witch. What's more, she's not the only one in town. There's more to the Glamour Girls than it seems... and once you're a Glamour Girl, there's no going back. Allison must use her rediscovered magic to defend Monrovia, protect her marriage and her children, and reclaim her legacy. Fighting tooth and nail for her family is easy, but what about for herself? Is it too late to confront her own demons and become the woman she dreams of being? "Katie Schickel's debut entertains while delightfully skewering our culture's obsession with domestic perfection. In the spirit of John Updike's *Witches of Eastwick* and Alice Hoffman's *Practical Magic*, Schickel casts a spell all her own. *Housewitch* takes us deep inside the dark arts of 21st century motherhood and sparkles with unexpected magic." —Amber Dermont, New York Times bestselling author of *The Starboard Sea*

Enjoy!

Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance.

Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

From Katie Schickel, one of Booklist's Top 10 Women's fiction of 2015, comes *The Mermaid's Secret*, an original, fresh, and absolutely captivating beach read. Life on land is suffocating for Jess Creary, who wastes her summers flipping burgers for tourists on a fishing boat off her quaint resort island home off the coast of Maine. After all, her older sister Kay died in a boating accident two years ago, her mother has disappeared, and her father isn't exactly dealing with things so well. Surfing and the handsome Captain Matthew are about the only bright spots in her life. Then, on her twenty-third birthday, Jess catches the perfect wave--a wave that transforms her into a mermaid. Under the sea, a startlingly beautiful, dark place, Jess is reborn into a confident, powerful predator with superhuman strength --finally she is someone to be reckoned with. Meanwhile, back on land, Jess's relationship

with Captain Matthew heats up, and so does her search for justice for Kay. Jess has thirty days to choose between land and sea; legs and fins; her humanity and her freedom. Who could ignore the freedom of the sea? Yet, the ocean is a dark, wild, lonely place. Is this a gift or a curse? Will Jess choose family and love, forgiveness and truth, or will she be seduced by the wild call of the sparkling sea forever?

Alternative Strategies For Global Security

The Resident 2015 (Cayman Islands)

The Cenotes of the Riviera Maya 2016

A complete guide to snorkeling, cavern, and cave diving the cenotes of the Riviera Maya. This book includes photographs, maps, and provides details of where and how to swim, dive, and enjoy these beautiful cenotes located on the Caribbean coast of Mexico's Yucatan Peninsula. Martyn Farr's *The Darkness Beckons* charts the history and development of cave diving, from early underwater expeditions in France in the late nineteenth century, through to cutting-edge dives across the globe, where iron-willed individuals are pushing the limits of equipment and techniques in the pursuit of exploration. Cave diving is the natural evolution of caving, where cavers and open-water divers overcome the challenges of water-filled passages by using specialist breathing apparatus to explore further and deeper than ever before. The challenges are many – distance, depth, temperature, visibility, rockfall and simple restriction in passage size – together with the physical and mental demands placed on an individual in an environment where, despite meticulous preparation, equipment can malfunction and one cannot expect to be rescued if something goes wrong. Early cave dives were made using Standard Equipment diving suits, before 'frogman' equipment was adopted by British and Italian divers in the 1940s. Around the same time, Jacques-Yves Cousteau and Émile Gagnan designed the compressed-air aqualung, the first scuba equipment. The development of breathing apparatus has continued, alongside solutions to evermore challenging projects, especially those at extreme depth. British cave divers, including the author, have been at the forefront of many developments, such as the explorations at Wookey Hole in the Mendips, Keld Head in the Yorkshire Dales and Pozo Azul in Spain. Cave diving today is a truly international endeavour, and Farr gives detailed and engaging accounts of developments in Europe, the Americas, Australia and New Zealand, Southern Africa and more. Farr introduces cave diving's pioneers and chronicles their achievements. Among a cast of many are the Britons Graham Balcombe and Mike Boon; the American Sheck Exley, who died while attempting to establish a new depth record in the Zacatón sinkhole in Mexico; and the outstanding German cave diver and equipment innovator Jochen Hasenmayer. The stories of their adventures are charged with courage, danger and excitement, and some have led to tragedy. First published in 1980, this 2017 edition of *The Darkness Beckons* has been fully revised and updated to reflect the latest developments. Featuring over 400 breathtaking photographs and illustrations, and with a foreword by renowned American cave diver and explorer Bill Stone, it is an inspirational read for anyone with an interest in exploration and adventure.

This is the first book to span the depth between traditional sport diving editions and the complex medical/commercial texts. It provides a balanced view of the fascinations and

The book manages to combine humor, adventure, tragedy, triumph, heroism, and even some forays into the risqué ... while chronicling the careers of 20 enduring personalities that helped make diving what it is today. Some of those interviewed are retired now, one (author Peter Benchley of *Jaws* fame) recently passed away, and many are still making history through their ongoing work. It's quite a group. Consider that the lineup includes actress and *Sea Hunt* star Zale Parry who also set the depth record for women divers back in 1954. Stan Waterman provides both the book's Foreword and a revealing insider look at his seven decades in diving. Living legend Bev Morgan pioneered the first dive training programs along with revolutionizing commercial diving equipment. His image in full hardhat dress also graces the book's cover. Morgan's candor and humor set the pace for the lively montage of dialogues to follow with Australian couple Ron and Valerie Taylor who rose to fame in the iconic shark documentary film *Blue Water, White Death*. They are joined by others from diving's first generation including filmmaker Al Giddings (*The Deep*, *Abyss*, *Titanic*, etc.), retail pioneer and cameraman Chuck Nicklin (*The Diving Locker*), manufacturers Dick Bonin (*Scubapro*) and Bob Hollis (*Oceanic*), photography masters Ernie Brooks and Paul Humann, as well as deep ocean explorer Dr. Bob Ballard who discovered the wrecks of the *Titanic*, *Bismarck*, and *PT-109*. Diving's second generation of innovators includes cave explorer Wes Skiles, filmmaker Mike deGruy, wreck explorer John Chatterton (of *Shadow Divers* fame), IMAX film producer Greg MacGillivray, and the dynamic husband/wife team of Howard and Michele Hall who seem to dominate the realm of documentary underwater films now (*Island of the Sharks*, *Coral Reef Adventure*, *Deep Sea 3D*). Last but not least, Stan Waterman talked Gilliam into sitting for an interview about his own amazing career and, typically, he shares a wicked sense of humor along with some biting perspective about what it was like to champion new technologies and daring approaches to diving business when the sport's ultra-conservatives wanted to suppress nitrox, liveboards, technical diving, diving computers, training methods, and honest journalism. Each chapter is a slice of human interest that lets the reader briefly pull back the curtain on the personal lives of diving's heroes and feel like they are part of the conversation. The full color book is lavishly illustrated with great photographs that capture each interviewee throughout their diving careers. It's a very personal journey and the reader will feel like they pulled up a chair and shared a cup of coffee around a table with each person. Gilliam enlisted help from other leading writers for some interviews he couldn't conduct himself and Fred Garth, Lina Hitchcock, Eric Hanauer, Douglas Seifert and Michel Gilbert & Danielle Alary all make significant contributions to round out the book. It's a massive volume, 8x11 inches in size, 496 pages, hard bound, and weighing in at a whopping eight pounds per copy.

Indonesian SDI Open Water Scuba Diver Student Manual

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and

get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe
