Learn step-by-step how to develop knowledge-based products for international use! Knowledge Organization and Classification in International Information Retrieval examines current efforts to deal with the increasing globalization of information and knowledge. International authors walk you through the theoretical foundations and conceptual elements behind knowledge management, addressing areas such as the Internet, multinational resources, translations, and information languages. The tools, techniques, and case studies provided in this book will be invaluable to anyone interested in bridging the international information retrieval language gap. This book is divided into four sections that address major themes for internationalized information and knowledge: “General Bibliographic Systems” discusses how bibliographic classification systems can be adapted for specific subjects, the problems with addressing different language expressions, and the future of these systems “Information Organization in Knowledge Resources” explores knowledge organization and classification, focusing mainly on libraries and on the Internet “Linguistics, Terminology, and Natural Language Processing” analyzes the latest developments in language processing and the design of information retrieval tools and resources “Knowledge in the World and the World of Knowledge” addresses the ontological foundations of knowledge organization and classification and knowledge management in organizations from different cultures With this book, you’ll gain a better understanding about the international efforts to globalize: the Dewey Decimal Classification the Library of Congress Classification the Universal Decimal Classification multilingual thesauri Web directories of education-related resources human language technology metadata schemas the North American Industry Classification Figures, tables, charts, and diagrams elucidate the concepts in Knowledge Organization and Classification in International Information Retrieval. Information educators and practitioners as well as specialists in classification and knowledge organization will find this book valuable for its focus on the problems of—and solutions for—information retrieval for specific linguistic, cultural, and domain communities of discourse.

This book analyzes the regulatory framework that Russia has developed to attract private capital and technology in the modernization of the electricity infrastructure. Comparing Russian and EU electricity law, the book identifies regulatory risks and examines investors’ protection under Russian and international investment law.

During the past decade there has been an enormous increase in knowledge of multiple myeloma and related disorders, reflected in the publication of more than 5000 articles on the subject in scientific journals. Much of this has come about as new technologies have made it possible to refine studies on chromosomes and genes and to gain information about gene expression. It is therefore highly appropriate that this new comprehensive reference should appear at this time. The book covers the whole field of multiple myeloma, and also related diseases such as Waldenström’s macroglobulinaemia, and incorporates both the basic science underlying the diseases and their clinical management. Each chapter has been written to &‘stand alone&’, allowing the reader to dip into a particular subject and find information quickly without the need to browse through multiple chapters. In addition to the developments described above, all of which are considered here, many other approaches to targeted therapy are reviewed.

Oleg Kharkhordin has constructed a compelling, subtle, and complex genealogy of the Soviet individual that is as much about Michel Foucault as it is about Russia. Examining the period from the Russian Revolution to the fall of Gorbachev, Kharkhordin demonstrates that Party rituals—which forced each Communist to reflect intensely and repeatedly on his or her "self," an entirely novel experience for many of them—had their antecedents in the Orthodox Christian practices of doing penance in the public gaze. Individualization in Soviet Russia occurred through the intensification of these public penitential practices rather than the private confessional practices that are characteristic of Western Christianity. He also finds that objectification of the individual in Russia relied on practices of mutual surveillance among peers, rather than on the hierarchical surveillance of subordinates by superiors that characterized the West. The implications of this book expand well beyond its brilliant analysis of the connection between Bolshevism and Eastern Orthodoxy to shed light on many questions about the nature of Russian society and culture.

This book, first published in 1997, examines the forced merger between national security interests and environmental policy makers arising from the Chemical Weapons Convention and its requirement to safely dismantle the world’s chemical weapons stockpiles. The two groups had to find a way to intersect and work together, and this book analyses the problems and politics involved.

The image of women in Russian culture has undergone profound changes: from the origins of modern Russian literature in the eighteenth century until the Revolution of 1917, when women were a source of fascination for Russian writers, to the socialist realism period, during which public discussion of the representation of women in literature rapidly declined and reappraisal of the position of women since the 1980s. This collection of essays by leading western and Russian specialists contains new insights and updates previous research into the role of women in Russian culture in the last two centuries and contributes to two exciting and growing research areas: the feminist critique of work by Russian male authors and the role of women in the arts. This collection of essays by leading western and Russian specialists has concentrated on the aesthetic qualities of works by women writers, this collection includes both close textual analysis and the discussion of biographical, historical, and political questions relating both to the representation of women and women's culture. The aim is not to present aunified manifesto, but rather to bring together a spectrum of approaches and perspectives on women and culture in Russia. Contributors: R. Marsh, A. Barker, J. Andrew, D. In *Hunting Nature*, Thomas P. Hodge explores Ivan Turgenev’s relationship to nature through his conception, description, and practice of hunting—the most unquenchable passion of his life. Informed by an ecocritical perspective, Hodge takes an approach that is equal parts interpretive and documentarian, grounding his observations thoroughly in Russian cultural and linguistic context and a wide range of Turgenev’s fiction, poetry, correspondence, and other writings. Included within the book are some of Turgenev’s important writings on nature—never previously translated into English. Turgenev, who is traditionally identified as a chronicler of Russia’s ideological struggles, is presented in *Hunting Nature* as an expert naturalist whose intimate knowledge of flora and fauna deeply informed his view of philosophy, politics, and the role of literature in society. Ultimately, Hodge argues that we stand to learn a great deal about Turgenev’s thought and complex literary technique when we read him in both cultural and environmental contexts. Hodge details how Turgenev remains mindful of the way textual detail is wedded to the organic world—the priroda that he observed, and ached for, and more keenly than perhaps any other Russian writer.

This book is the first comprehensive text on utilization management in the clinical laboratory and other ancillary services. It provides a detailed overview on how to establish a successful utilization management program, focusing on such issues as leadership, governance, informatics, and application of utilization management tools. The volume also describes ways to establish utilization management programs for multiple specialties, including anatomic pathology and cytology, hematology, radiology, clinical chemistry, and genetic testing among other specialties. Numerous examples of specific utilization management initiatives are also described that can be imported to other health care organizations. A chapter on utilization management in Canada is also included. Edited by an established national leader in utilization management, *Utilization Management in the Clinical Laboratory and Other Ancillary Services* is a valuable resource for physicians, pathologists, laboratory directors, hospital administrators, and medical insurance professionals looking to implement a utilization management program.

The first full-length study of same-sex love in any period of Russian or Soviet history, *Homosexual Desire in Revolutionary Russia* investigates the private worlds of sexual dissidents during the pivotal decades before and after the 1917 Bolshevik Revolution. Using records and archives available to researchers only since the fall of Communism, Dan Healey revisits the rich homosexual subcultures of St. Petersburg and Moscow, illustrating the ambiguous attitude of the late Tsarist regime and revolutionary rulers toward gay men and lesbians. *Homosexual Desire in Revolutionary Russia* reveals a world of ordinary Russians who lived extraordinary lives and records the voices of a long-silenced minority.

**War and Enlightenment in Russia** explores how members of the military during the reign of Catherine II reconciled Enlightenment ideas about the equality and moral worth of all humans with the Russian reality based on serfdom, a world governed by autocracy, absolute respect for authority, and subordination to seniority. While there is a sizable literature about the impact of the Enlightenment on government, economy, manners, and literature in Russia, no analytical framework that outlines its impact on the military exists. Eugene Miakinkov’s research addresses this gap and challenges the assumption that the military was an unadaptable and vertical institution. Using archival sources, military manuals, essays, memoirs, and letters, the author demonstrates how the Russian militaires philosophes operationalized the Enlightenment by turning thought into reality.

Praise for Blueprint for Revolution “The title is no exaggeration. Otpor’s methods . . . have been adopted by democracy movements around the world. The Egyptian opposition used them to topple Hosni Mubarak. In Lebanon, the Serbs helped the Cedar Revolution extricate the country from Syrian control. In Maldives, their methods were the key to overthrowing a dictator who had held power for thirty years. In many

other countries, people have used what Canvas teaches to accomplish other political goals, such as fighting corruption or protecting the environment.” —The New York Times “A clear, well-constructed, and easily applicable set of principles for any David facing any Goliath (sans slingshot, of course) . . . By the end of Blueprint, the idea that a punch is no match for a punch line feels like anything but a joke.” —The Boston Globe “An entertaining primer on the theory and practice of peaceful protest.” —The Guardian “With this wonderful book, Srdja Popovic is inspiring ordinary people facing injustice and oppression to use this tool kit to challenge their oppressors and create something much better. When I was growing up, we dreamed that young people could bring down those who misused their power and create a more just

and democratic society. For Srdja Popovic, living in Belgrade in 1998, this same dream was potentially a much more dangerous idea. But with an extraordinarily courageous group of students that formed Otpor!, Srdja used imagination, invention, cunning, and lots of humor to create a movement that not only succeeded in toppling the brutal dictator Slobodan Milošević but has become a blueprint for nonviolent revolution around the world. Srdja rules!” —Peter Gabriel “Blueprint for Revolution is not only a spirited guide to changing the world but a breakthrough in the annals of advice for those who seek justice and democracy. It asks (and not heavy-handedly): As long as you want to change the world, why not do it joyfully? It’s not just funny. It’s seriously funny. No joke.” —Todd Gitlin, author of The Sixties and Occupy
