The semiconductor laser, invented over 50 years ago, has had an enormous impact on the digital technologies that now dominate so many applications in business, commerce and the home. The laser is used in all types of optical fibre communication networks that enable the operation of the internet, e-mail, voice and skype transmission. Approximately one billion are produced each year for a market valued at around \$5 billion. Nearly all semiconductor lasers now use extremely thin layers of light emitting materials (quantum well lasers). Increasingly smaller nanostructures are used in the form of

quantum dots. The impact of the semiconductor laser is surprising in the light of the complexity of the physical processes that determine the operation of every device. This text takes the reader from the fundamental optical gain and carrier recombination processes in quantum wells and quantum dots, through descriptions of common device structures to an understanding of their operating characteristics. It has a consistent treatment of both quantum dot and quantum well structures taking full account of their dimensionality, which provides the reader with a complete account of contemporary quantum confined laser diodes. It includes plenty of illustrations from both model calculations and experimental observations. There are numerous exercises, many designed to give a feel for values of key parameters and experience obtaining quantitative results from equations. Some challenging concepts, previously the subject matter of research monographs, are treated here at this level for the first time. Capitalist Nigger is an explosive and jarring indictment of the black race. The book asserts that the Negroid race, as naturally endowed as any other, is culpably a non-productive race, a consumer race that depends on other communities for its culture, its language, its feeding and its clothing. Despite enormous natural resources, blacks are economic slaves because they lack the 'devil-may-care' attitude and the 'killer instinct' of the Caucasian, as well as the spider web mentality of the Asian. A Capitalist Nigger must embody ruthlessness in pursuit of excellence in his drive towards achieving the goal of becoming an economic warrior. In putting forward the idea of the Capitalist Nigger, Chika Onyeani charts a road to success whereby black economic warriors employ the 'Spider Web Doctrine' – discipline, self-reliance, ruthlessness – to escape from their victim mentality. Born in Nigeria, Chika Onyeani is a journalist, editor and former diplomat.

The financial crisis of 2007/2008 prompted governments across Europe to adopt austerity measures aimed at the reduction of their escalating budget deficits. Higher Education in Austerity Europe explores how the resulting cuts in public expenditure - together with the increasing reliance on the privatisation of services - have impacted on higher education directly through the reduction of public sector provision and indirectly as a result of the social and political consequences of that reduction. Moreover, it explores how the effects of these economic policies have differed markedly across the national regions of Europe, with the result that inequality has increased significantly both within and between national regions, and this, in turn, has led to social and political dislocation within and across communities. It is only by viewing higher education within this broader context that we can begin to understand the full implications of the austerity measures introduced over the last ten years. Jon Nixon draws together leading scholars to delve into the complexity of impact and response generated by these measures. Part 1 focuses on cross-European perspectives; Part 2 on the impact of austerity measures within national systems; and Part 3 on new perspectives and possibilities. The volume also includes considered responses from 'outsiders' by academics located in Asia, Australia, and the USA, providing an additional dimension to the analysis. As well as analysing the full impact of austerity measures across some of the worst hit national regions of Europe, the contributors also identifying openings and possibilities for renewal.
