

Sep Pannelli In Policarbonato

Set during World War II, this novel explores the relationships between three generations of the same family. A father longs to show his son the world; a grandfather hopes to protect his son and grandson from the war; and a grandson sees the truth that the older men cannot face. Impressive progress has been made in the field of laser-plasma acceleration in the last decade, with outstanding achievements from both experimental and theoretical viewpoints. Closely exploiting the development of ultra-intense, ultrashort pulse lasers, laser-plasma acceleration has developed rapidly, achieving accelerating gradients of the order of tens of GeV/m, and making the prospect of miniature accelerators a more realistic possibility.This book presents the lectures delivered at the Enrico Fermi International School of Physics and summer school ' Laser-Plasma Acceleration', held in Varenna, Italy, in June 2011. The Handbook of Ecotoxicology provides a readily accessible, yet critical collection of information on ecotoxicological testing. Now available in a single paperback volume, this handbook represents excellent value. Part A concentrates on techniques, especially those tests used for prediction. Thorough descriptions of the main tests are provided, followed by critical analyses in terms of ease of handling, repeatability and ecological relevance, and finally, an extensive bibliography citing key documents describing test methods and key papers evaluating them. Part B focuses on the toxicants themselves: summarising their ecological effects, describing ways of predicting effects from physico-chemical properties alone, and describing and discussing fate models. Now available as a single volume in paperback An invaluable reference resource
Contemporary Architectonic Envelope Between Language and Construction

The Mediterranean City in Transition
Handbook of Ecotoxicology
Serpentine Gallery, London
This publication documents this year's Serpentine Pavilion in London--a chrysalis-like structure made from colorful, transparent plastic by Spanish architects José Selgas (born 1965) and Lucia Cano (born 1965). Sketches, diagrams and construction methods are also included in this ample overview of the installation.

The Vienna Jubilee Exhibition of 1898 provided the occasion for these remarkable essays by the Austrian architect, theorist, and irreverent critic of his own culture, Adolf Loos. The rational underpinnings of his later accusation that "ornament is crime," first appear in these polemical thrusts at the stylized work of Viennese successionsists Joseph Hoffmann, Otto Wagner, Hermann Obrist, and Gustav Klimt, among others. Conundrum is a mind-stretch. Encrypting idioms into their typographic equivalents, Harry enlivens our everyday language and challenges readers to see that "time after time after time" or, at least, "more often than not" "the writing is on the wall." For fans of word puzzles, sudoku, crosswords, and all manner of mind games, Conundrum offers an artfully packaged, cleverly designed new challenge. Drawing upon, literally in this case, graphic puzzles that he began creating as a child, Harry's developed over 100 witty conundrums for this book that will stretch the mind as well as delight the senses. A member of the Alliance Graphique Internationale, a frequent lecturer and contributor to design discourse, an internationally recognized leader in design, and a founder of Lippa Pearce, one of the UK's most respected design agencies, Harry refines the way we see and communicate. Conundrum achieves nothing less than changing how we understand and interact with language.

Frei Otto, Bodo Rasch
His in-depth look at new-generation fighter programs under development around the world profiles Lockheed Martin's F-22A Raptor and F-35 Joint Strike Fighter, as well as the Eurofighter Typhoon, Saab Gripen, Dassault Rafale and Sukhoi family of Su-27 derivatives, commonly referred to as the Super Flankers. The Gripen, Rafale and some Su-27 subtypes have already entered service. The Eurofighter will be next and the two American fighters are scheduled to join the inventory over the next decade. In full color throughout, this unique new book is the first to cover all of the emerging fighter platforms, and is packed with superb air-to-air photos, specifications and tables, 3-views, technical drawings and magnificent artwork.

One of the world's most renowned classicists here offers a fascinating look at myths of origins and their role in ancient Greek civic ideology. Through a series of critical interpretations of Athenian myths, Nicole Loraux explores the meaning of democracy in its first form, which excluded from its benefits women, slaves, and foreigners. Arguing that these stories have much to tell us about the present and the human condition, her book makes important claims about the role of the past in our understanding of the present. Loraux begins by discussing the Greek fascination with being born from the earth. Myths of autochthony, she asserts, shed important light on attitudes toward both foreigners and women in democratic states. She considers the role demarcated for women by the Pandora myth, according to which women are artificially created out of earth and therefore belong to a race apart. Her analysis also extends to contemporary issues, concluding with the place of the foreigner in democratic societies, ancient and modern. Originally published in France in 1996, Born of the Earth has been superbly translated into English by Selma Stewart.

This book contains chapters based on 9 of the lectures delivered at the Enrico Fermi School of Physics Neutrino Physics and Astrophysics, held from 25 of July to 5 August 2011. The event was organized by the Italian Physical Society SIF jointly with the International School of Astro-particle Physics ISAPP, a network whose aim is to build up an astro-particle community of both astrophysicists and particle physicists.Included are chapters on Neutrino oscillation physics B. Kayser Double-beta decay E. Fiorini Light neutrinos in cosmology S. Pastor Neutrinos and the stars G.G. Raffelt High energy neutrinos and Mies Van Der Rohe on the Building Art

Modern Architectures in History

Selgascano. Serpentine Pavillion 2015

The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research—the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study.

The three-dimensional nucleon structure is central to many theoretical and experimental activities, and research in this field has seen many advances in the last two decades, addressing fundamental questions such as the orbital motion of quarks and gluons inside the nucleons, their spatial distribution, and the correlation between spin and intrinsic motion. A real three-dimensional imaging of the nucleon as a composite object, both in momentum and coordinate space, is slowly emerging.This book presents lectures and seminars from the Enrico Fermi School Three-Dimensional Partonic Structure of the Nucleon, held in Varenna.

Playgrounds are places where children can slide, swing, jump, skate, climb and do all those things which their motor control development requires. Furthermore, the social skills which children acquire on the playground develop into capabilities which they take with them into adulthood. Studies show that playgrounds are among the most important locations for young people outside the settings of home and school. This title is dedicated to the international "kidscape" of today and presents the most innovative concepts and current trends of this demanding area of design. The projects lead to the knowledge that constructive collaboration on the part of architects and designers, landscape architects and municipal planners, artists and toy manufacturers is the key to the well-being of the children.

Through two critical contributions, this text looks at the evolution and roles that have been assumed today by the facade envelope in contemporary architectonic output. The ever-more radical separation between structure and shell entrusts to the latter the expressive and communicative functions of the building. This appears to represent a belated victory for that Bekleidung prinzip which, though first expressed a century ago, opened the discussion on an articulated and problematic phenomenon, whose basis we can investigate today with technical knowhow and new theoretical knowledge. The evolutionary dynamics of the processes of planning and building in architecture, external factors related to the marketplace and the production of new materials filled with untapped expressive potential, the increase in the demand for results and performance of the building system, all these have had their influence on the phenomenon.

This reference provides concise information on the treatment and management of inherited metabolic diseases for the clinician. World experts cover all commonalities of therapy giving practical advice and guidance for daily practice. All established treatment protocols in this quickly developing area of medicine are clearly described, including follow-up protocols and monitoring.

Alternative and experimental therapies are also described and evaluated. Numerous tables, figures, and several indices (symptom, disease name, tests, etc.) allow rapid access to specific details. This book is invaluable to anyone dealing with patients with inherited metabolic diseases, pediatricians, internists, neurologists, and clinical geneticists.

The remains of antiquity define Greek architecture in the popular imagination, but Greek edifices encompass far more than these ancient structures. Offered here is a comprehensive survey of modern Greek architecture of the past hundred-plus years. The book explores the buildings and architects of modern Greece, ranging from nineteenth-century neoclassical edifices to minimalist contemporary works and urban renewal projects. The ideas driving the creation of these buildings are given full attention, as the authors examine the influence of the rise of Modernism in the arts and the characteristics of regional styles, while also considering the reasons behind the bland, functional structures that have dominated Greek cityscapes since World War II. Greecesituates this design survey within the nation 's tumultuous cultural and political history, including the two world wars, a military dictatorship, civil war, and the consumerist boom of the 1990s. A penetrating and thorough study, Greece offers a compelling account of modern Greek architecture that will be invaluable for all scholars of design and European history.

The Artless Word

Three-dimensional Partonic Structure of the Nucleon
The semiconductor optical amplifier has emerged as an important component in many optical fibre communication, switching and signal processing systems. This invaluable information source provides a comprehensive and detailed treatment of the design and applications of SOAs.

This book presents a complete encyclopedia of superconducting fluctuations, summarising the last thirty-five years of work in the field. The first part of the book is devoted to an extended discussion of the Ginzburg-Landau phenomenology of fluctuations in its thermodynamical and time-dependent versions and its various applications. The second part deals with microscopic justification of the Ginzburg-Landau approach and presents the diagrammatic theory of fluctuations. The third part is devoted to a less-detailed review of the manifestation of fluctuations in observables: diamagnetism, magnetoconductivity, various tunneling characteristics, thermoelectricity, and NMR relaxation. The final chapters turn to the manifestation of fluctuations in unconventional superconducting systems: nanodrops, nanorings, Berezinsky-Kosterlitz-Thouless state, quantum phase transition between superconductor and insulator, and thermal and quantum fluctuations in weak superconducting systems. The book ends with a brief discussion on theories of high temperature superconductivity, where fluctuations appear as the possible protagonist of this exciting phenomenon.

Postwar capitalist development has involved a transition from polarization toward diffuse urbanization and flexibility. The timing and form of this transition and its effects on spatial structures have varied, as is especially evident in the case of Mediterranean Europe. Focusing upon Greater Athens between 1948 and 1981 - the crucial period of the transition - Lila Leontidou explores the role of social classes in urban development.

Warned by a Hong Kong fortune-teller not to risk flying for a year, Tiziano Terzani, a vastly experienced Asia correspondent, took his first step into an unknown world: Traveling by foot, train, bus, car, and boat, and consulting soothsayers and shamans along the way, Terzani discovered as never before the complex traditions and unexpected delights of the people and lands he had been reporting on for years. "I was marked for death," writes Terzani, "and instead I was reborn."

The Prada foundation's new Art Centre and permanent Exhibition Space is situated in a location that includes buildings dating from 1910s belonging to one of the first Milanese spirits manufacturing companies. Preserved in their original conditions, the seven buildings including warehouse, laboratories, brewing silos and workers' residences surround a large courtyard. OMA/Rem Koolhaas's project adds an exhibition building, an auditorium and a tower to the existing structure to house selections of works from the collection. This project is a unique approach to the idea of the co-existence of contemporary architecture with the regeneration of an historic area, representing the evolution of the industrial development of Milan that continues to the present day.

Biophotonics and microscopy are highly inter-related fields in terms of both technological development and biomedical applications. Recent advances in microscopy have been paralleled by new opportunities for biophotonics, including the investigation and manipulation of biological phenomena using light and its application to biomedicine. This book contains papers from the Enrico Fermi International School of Physics on Microscopy Applied to Biophotonics, held in Varenna, Italy, in July 2011. The lectures spanned the basic science of imaging, through advanced microscopy techniques, to the state-of-the-art in biomedical imaging, and were complemented by seminars from world leaders in biophotonics. Subjects covered include: an overview of biophotonics; fundamentals of microscopy and an introduction to nonlinear microscopy; fluorescence; lasers for biophotonics; and an introduction to ultra-microscopy.

A Fortune-teller Told Me

Speak Into the Void

Mies van der Rohe's architecture has been well documented, yet his writings, which contain the key to understanding his work, have been largely unexplored. From a body of writing that is surprisingly large for the self-described "unwilling author," Fritz Neumeyer reconstructs the metaphysical and philosophical inquiry on which Mies based his modernism. An appendix presents all of the essential texts by Mies, including some that have not previously appeared in English. Of special interest is the manuscript notebook from the Mies van der Rohe Archive in the Museum of Modern Art, New York, dating from the crucial years 1927-28 and published for the first time in this book.

Collected Essays, 1897-1900
