

Shoji Kumiko D M King Shoji And Kumiko Design

Proceedings of the 2019 International Conference on Frontiers in Education: Computer Science & Computer Engineering (FECS'19) held July 29th – August 1st, 2019 in Las Vegas, Nevada.

This study examines the significance of the archetypal heroes and heroines of Japanese cinema and traces both their prior development in literature, drama, and folklore, and their subsequent variations in popular culture.

How to whittle contains 25 beautiful and original designs to carve by hand. Featuring a range of projects from finely polished butter paddles and lovepoons to a custom-made coatrack, this book also provides advice on selecting the best wood for your projects together with details of a range of finishes that will take the items from rustic objects to stunning showpieces.

Everything you need to start woodworking with hand tools! Hand tool woodworking can be a source of great pride, satisfaction and amazing results—not to mention less noise and sawdust. But there's a lot to learn, what with a seemingly endless array of chisels and mallets to workbenches and handplanes. You'll learn proven methods for sharpening your tools, prepping your stock and timeless joinery techniques including mortise-and-tenon joints, dovetails, rabbets and others. Within these pages you'll find:
• Advice for selecting the tools you need and setting up shop
• Complete instructions for using the tools you'll reach for time and again
• Tuning processes for keeping your tools sharp and precise
• Technique variations and alternate methods so you can decide what works best for you
Take the mystery out of hand tools and experience the satisfaction of crafting something truly handmade.

Molecular Aspects of Hepatocellular Carcinoma

Book 3 Hexagonal Patterns

6 Weeks to Finals

Computer Science and Computer Engineering

Masking Selves, Making Subjects

Contrast-Enhanced Mammography

A discussion of the synthesis problems, theories and applications of fluorinated surfactants, this second edition is updated with four new chapters on repellency and protection against soiling and staining and over 2900 references, equations, and drawings (800 more than the previous edition). It lists alphabetically and explores numerous applications of fluorinated surfactants. Called "...a most useful introduction to these fascinating materials" by the Journal of Dispersion Science and Technology and "...a coherent and stimulating handbook...the most useful book in the fluorinated surfactants field to date. Recommended." by the Journal of the Chemical Society, *Faraday Transactions - this book is a source of factual data, methods of manufacture, and chemical structures for the surfactant scientist and user.*

This comprehensive research bibliography compiles, annotates, indexes and cross-references resources in the principal Western languages which focus on China, Japan, and Korea in the areas of philosophy and religious studies, supporting resources in theology, history, culture, and related social sciences. A notable additional feature is the inclusion of extensive Internet-based resources, such as a wide variety of web-sites, discussion lists, electronic texts, virtual libraries, online journals and related material.

Written entirely by surgical urologists, Surgical Management of Urolithiasis: Percutaneous, Shockwave and Uretroscopy presents a comprehensive overview of the past, present, and future of surgical techniques, with a focus on educating urologists on the full spectrum of stone procedures. In addition to the technical issues, detailed complications are described. Basic as well as advanced techniques are presented in both a didactic and visual mode with representative endoscopic images and radiographs. Recent advancements which are not routinely a core component of surgical training programs are also covered in detail. Compact and extensively illustrated, Surgical Management of Urolithiasis: Percutaneous, Shockwave and Uretroscopy is a unique and valuable resource in the field of surgical urolithiasis, essential both for those currently in training and for those already in clinical practice. Therapeutic options for late-stage liver cancer are very limited and the prognosis is often poor. A better understanding of the molecular mechanisms involved in the initiation, progression, and metastasis of hepatocellular carcinoma is critical for developing more rational diagnostic and therapeutic approaches. This e-book covers current developments on clinically relevant research on the molecular biology of hepatocellular carcinoma. This e-book should be a valuable reference for professional gastroenterologists, hepatologists and oncologists as well as medical students and researchers.

Golden Sky Stories

Digital Breast Tomosynthesis

The Supplementary Japanese-English Dictionary

Season of Violence

Frontiers in Education

A Handbook and Dictionary of the Japanese Writing System

This book provides a comprehensive description of the screening and clinical applications of digital breast tomosynthesis (DBT) and offers straightforward, clear guidance on use of the technique. Informative clinical cases are presented to illustrate how to take advantage of DBT in clinical practice. The importance of DBT as a diagnostic tool for both screening and diagnosis is increasing rapidly. DBT improves upon mammography by depicting breast tissue on a video clip made of cross-sectional images reconstructed in correspondence with their mammographic planes of acquisition. DBT results in markedly reduced summation of overlapping breast tissue and offers the potential to improve mammographic breast cancer surveillance and diagnosis. This book will be an excellent practical teaching guide for beginners and a useful reference for more experienced radiologists.

(Prepared) -- Plenary Lectures: New Catalysts for Controlled/Living Atom Transfer Radical Polymerization (ATRP), Catalysis and Applications of Gold Nanoparticles -- Oral Presentations: Ionic Liquids as New Solvents and Catalysis for Petrochemical and Refining Processes; High Throughput Experiment on the Investigation of Oxidation Catalysts with Gas Sensor System -- Poster Presentations: Development of a Low-Temperature Dioxin Decomposition Catalyst; Studies on Unique Properties of Polyolefins Separated with Metalocene Catalyst Systems -- Index.

I was gratified by the most favorable reception and wide usage received by the first edition of this book. A decade seems to be a short period for a book on pathology, and yet it witnessed many important changes of concepts, along with a formidable growth of knowledge. The second edition required extensive reorganization. There are new chapters on mitochondriopathies, on peroxisomal diseases and on spongy myelino pathies. Major revisions and new additions were necessary in many chapters, for instance those on the dysplasias of the cerebral and of the cerebellar hemispheres, which were formerly reorganized. The chapters on perinatal pathology were reorganized to give a more logical sequence of prenatal, perinatal and postnatal lesions. The entire text was worked over for brevity. A wealth of new references was added with the aim of staying abreast with the literature up to summer 1988. All refer ences were double checked for errors. My gratitude goes to Mrs. Gisela Hopfe and Mrs. Cynthia Bunker for their untiring, diligent help. As a result, this second edition is an essentially rewritten text. Advance in the prevention of human suffering is based on a thorough understand ing of the nature of disease. I hope that this text will continue to be of service in this behalf. Perhaps it may also reflect and foster the intellectual curiosity which makes the "reading of brains" so interesting an occupation. Göttingen, 1989 Reinhard L.

Crystalline textures and fabrics of ice cores from the 2164-m-thick ice sheet at Byrd Station, Antarctica, reveal the existence of an anisotropic ice sheet. A gradual but persistent increase in the c-axis preferred orientation of the ice crystals was observed between the surface and 1200m. This progressive growth of an oriented crystal fabric is accompanied by a 20-fold increase in crystal size between 600 and 1200m. A broad vertical clustering of c-axes develops by 1200m. Between 1200 and 1300 m the structure transforms into a fine-grained mosaic of crystals with their basal glide planes now oriented substantially within the horizontal. This highly oriented fine-grained structure, which persists to 1800m, is compatible only with a strong horizontal shear deformation in this part of the ice sheet. Rapid transformation from single- to multiple-maximum fabrics occurs below 1800m. This transformation, accompanied by the growth of very large crystals, is attributed to the overriding effect of relatively high temperatures in the bottom layers of old ice at Byrd Station rather than to a significant decrease in stress. The zone of single-maximum fabrics between 1200 and 1800 m also contains numerous layers of volcanic dust. Fabrics of the very fine-grained ice associated with these dust bands indicate the bands are actively associated with shearing in the ice sheet. Some slipping of ice along the bedrock seems likely at Byrd Station, since the basal ice is at the pressure melting point and liquid water is known to exist at the ice/rock interface.

Computational Phonogram Archiving

Making Shoji

Their Tradition, Spirit and Use

Nomad

Muscle Pathology

Heterogeneous Photocatalysis

In the twenty-first century, applications in medicine and engineering must acquire greater safety and flexibility if they are to yield better products at higher efficiency. Experts from academia, industry, and government research laboratories who have pioneered CME ideas and technologies describe its concept and research approach and discuss related hardware and software, science and technology, and medicine and engineering. This book will be invaluable to scientists, researchers, and graduates in the emerging field of CME.

The construction of shoji - Japanese sliding doors and screens - requires great skill and attention to detail. However the task is within the reach of amateur woodworkers. Toshio Odate provides the necessary guidance and skills needed to tackle this traditional craft with confidence.

This book is a comprehensive guide to contrast-enhanced mammography (CEM), a novel advanced mammography technique using dual-energy mammography in combination with intravenous contrast administration in order to increase the diagnostic performance of digital mammography. Readers will find helpful information on the principles of CEM and indications for the technique. Detailed attention is devoted to image interpretation, with presentation of case examples and highlighting of pitfalls and artifacts. Other topics to be addressed include the establishment of a CEM program, the comparative merits of CEM and MRI, and the roles of CEM in screening populations and monitoring of response to neoadjuvant chemotherapy. CEM became commercially available in 2011 and is increasingly being used in clinical practice owing to its superiority over full-field digital mammography. This book will be an ideal source of knowledge and guidance for all who wish to start using the technique or to learn more about it.

Annotation The four volume set LNAI 3681, LNAI 3682, LNAI 3683, and LNAI 3684constitute the refereed proceedings of the 9th International Conferenceon Knowledge-Based Intelligent Information and Engineering Systems, KES2005, held in Melbourne, Australia in September 2005. The 716 revised papers presented were carefully reviewed and selected fromearly 1400 submissions. The papers present a wealth of original researchresults from the field of intelligent information processing in thebroadest sense; topics covered in the first volume are intelligentdesign support systems, data engineering, knowledge engineering andontologies, knowledge discovery and data mining, advanced networkapplication, approaches and methods of security engineering, chancediscovery, information hiding and multimedia signal processing, softcomputing techniques and their applications, intelligent agenttechnology and applications, smart systems, knowledge - based interfacesystems, intelligent information processing for remote sensing, intelligent human computer interaction systems, experience managementand knowledge management, network (security) real-time and faulttolerant systems, advanced network application and real-time systems, and intelligent watermarking algorithms.

Discover the latest research in photocatalysis combined with foundational topics in basic physical and chemical photocatalytic processes in Heterogeneous Photocatalysis: From Fundamentals to Applications in Energy Conversion and Depollution, distinguished researcher and editor Jennifer Strunk delivers a rigorous discussion of the two main topics in her field—energy conversion and depollution reactions. The book covers topics like water splitting, CO2 reduction, NOx abatement and harmful organics degradation. In addition to the latest research on these topics, the reference provides readers with fundamental information about elementary physical and chemical processes in photocatalysis that are extremely practical in this interdisciplinary field. It offers an excellent overview of modern heterogeneous photocatalysis and combines concepts from different viewpoints to allow researchers with backgrounds as varied as electrochemistry, material science, and semiconductor physics to begin developing solutions with photocatalysis. In addition to subjects like metal-free photocatalysts and photocarrier loss pathways in metal oxide absorber materials for photocatalysis explored with time-resolved spectroscopy, readers will also benefit from the inclusion of: Thorough introductions to kinetic and thermodynamic considerations for photocatalyst design and the logic, concepts, and methods of the design of reliable studies on photocatalysis Detailed explorations of in-situ spectroscopy for mechanistic studies in semiconductor photocatalysis and the principles and limitations of photoelectrochemical fuel generation Discussions of photocatalysis, including the heterogeneous catalysis perspective and insights into photocatalysis from computational chemistry Treatments of selected aspects of photoreactor engineering and defects in photocatalysis Perfect for photochemists, physical and catalytic chemists, electrochemists, and materials scientists, Heterogeneous Photocatalysis will also earn a place in the libraries of surface physicists and environmental chemists seeking up-to-date information about energy conversion and depollution reactions.

Shoji and Kumiko DesignThe basics& M King

This compact yet thorough tutorial is the perfect introduction to the basic concepts of solving partial differential equations (PDEs) using parallel numerical methods. In just eight short chapters, the authors provide readers with enough basic knowledge of PDEs, discretization methods, solution techniques, parallel computers, parallel programming, and the run-time behavior of parallel algorithms to allow them to understand, develop, and implement parallel PDE solvers.

Examples throughout the book are intentionally kept simple so that the parallelization strategies are not dominated by technical details.

Pain 2012: Refresher Courses, 14th World Congress on Pain, is based on IASP's refresher courses on pain research and treatment. Includes techniques (neuroimaging, genetics), treatments (interventional, psychological, pharmacological, complementary/alternative), and disorders (neuropathic pain, headache, cancer pain, musculoskeletal pain, CRPS, orofacial pain, postoperative pain, pediatric pain, abdominopelvic pain).

Japanese-style shoji screens are translucent, wooden-lattice panels that subtly transform light and space and add an elegant touch to any decor. This book contains all the information you need to design and make shoji for your own home or apartment. Features
• Notes on aesthetics and design fundamentals
• Complete how-to guide covering basic construction methods, screen materials, and wood selection
• Home projects, including window inserts, sliding and hanging screens, glass panel shoji, double- and single-sided shoji, skylight shoji, decorative wall boxes, and floor and table lanterns
• Introduction to Japanese hand tools and planing and joinery techniques
• Sample lattice patterns, photographs, and line drawings for design and remodeling ideas
• List of suppliers

Captain America's sidekick Ricki Barnes is transported to another dimension where Captain America is dead and she has never existed, and she must reconnect with her brother and return to criminalgating as the superhero Nomad.

Golden Sky Stories is a heartwarming, non-violent role-playing game from Japan, by Ryo Kamiya. In this game, players take on the role of herge, animals that have just a little bit of magical power, including the ability to temporarily take on human form. You can be a fox, raccoon dog, cat, dog, rabbit, or bird, and each kind has their own special magical powers. Players will then attempt to solve problems around a small enchanted town with ingenuity, co-operation and friendship.

The Sociopolitical and Religious Significance of the Principal Heroes and Heroines

Natural Language Processing – IJCNLP 2004

The Genius of Japanese Carpentry

The Complete System for Audition Success

Shoji

This book constitutes the thoroughly refereed post-proceedings of the First International Joint Conference on Natural Language Processing, IJCNLP 2004, held in Hainan Island, China in March 2004. The 84 revised full papers presented in this volume were carefully selected during two rounds of reviewing and improvement from 211 papers submitted. The papers are organized in topical sections on dialogue and discourse; FSA and parsing algorithms; information extractions and question answering; information retrieval; lexical semantics, ontologies, and linguistic resources; machine translation and multilinguality; NLP software and applications, semantic disambiguities; statistical models and machine learning; taggers, chunkers, and shallow parsers; text and sentence generation; text mining; theories and formalisms for morphology, syntax, and semantics; word segmentation; NLP in mobile information retrieval and user interfaces; and text mining in bioinformatics.

The goals of the 10th International Space Conference on "Protection of Materials and Structures from Space Environment" ICPMSE-10J, since its inception in 1992, have been to facilitate exchanges between members of the various engineering and science disciplines involved in the development of space materials, including aspects of LEO, GEO and Deep Space environments, ground-based qualification, and in-flight experiments and lessons learned from operational vehicles that are closely interrelated to disciplines of the atmospheric sciences, solar-terrestrial interactions and space life sciences. The knowledge of environmental conditions on and around the Moon, Mars, Venus and the low Earth orbit as well as other possible candidates for landing such as asteroids have become an important issue, and protecting both hardware and human life from the effects of space environments has taken on a new meaning in light of the increased interest in space travel and colonization of other planets. And while many material experiments have been carried out on the ground and in open space in the last 50 years (LDEF, MEEP, SARE, MISSE, AOP, DSPSE, ESEM, EURECA, HST, MDIM, MIS, MPID, MPAC and SEED), many questions regarding the environmental impact of space on materials remain either poorly understood or unanswered. The coming generations of scientists will have to continue this work and tackle new challenges, continuing to build the level of confidence humans will need to continue the colonization of space. It is hoped that the proceedings of the ICPMSE-10J presented in this book will constitute a small contribution to doing so.

Book 4 Diamond Patterns is the fourth book in the Shoji and Kumiko Design series, and follows on seamlessly from Book 3 Hexagonal Patterns. In Book 4, Des King gives detailed instructions on making 31 stunning patterns in the diamond (hishi-gata) jigumi arrangement, including the spectacular yotsub-kude four-way joint and tomo dragonfly pattern.More than 350 photographs and diagrams guide you at each stage on making these patterns using tools found in any Western workshop, and simple shop-made jigs. As with Books 1, 2 and 3, no specialized tools are required for any of the patterns covered in Book 4.

With a history of nearly a thousand years, shoji - translucent paper-backed sliding doors and screens - are an inherent part of Japanese tradition and culture. But their beauty and charm can equally be adapted to rooms in a Western home. In this book, Des King examines basic shoji making and design. He gives comprehensive background information about shoji and how they have evolved, and detailed step-by-step instructions, supported by many diagrams and photographs, on how to make three shoji with progressively more complex kumiko arrangements, and variations on structure and joinery. Kumiko patterns enhance the uniqueness and charm of shoji, and Des King introduces three different kinds of patterns, and provides detailed instructions on how to make each kind, including dimensional diagrams of jigs that will improve work efficiency. He also dispels many of the myths about the Japanese hand-plane - the kanna - with an extensive description of how to set up, use and maintain this exceptional tool, including problems that can arise and how to avoid them. Through his highly structured and traditional approach in Book 1, Des King lays solid foundations from which any woodworker can confidently look toward tackling much more complex kumiko patterns and arrangements that can enhance the flair and individuality of shoji in any setting.

This sophisticated and comprehensive study is the first to situate Japanese American women's writing within theoretical contexts that provide a means of articulating the complex relationships between language and the body, gender and agency, nationalism and identity. Through an examination of post-World War II autobiographical writings, fiction, and poetry, Traise Yamamoto argues that these writers have employed the trope of masking/textually and psychologically/as a strategy to create an alternative discursive practice and to protect the self as subject. Yamamoto's range is broad, and her interdisciplinary approach yields richly textured, in-depth readings of a number of genres, including film and travel narrative. Looking at how the West has sexualized, infantilized, and feminized Japanese culture for over a century, she examines contemporary Japanese American women's struggle with this orientalist fantasy. Analyzing the various constraints and possibilities that these writers negotiate in order to articulate their differences, she shows how masking serves as a self-affirming discourse that dynamically intersects with mainstream culture's racial and sexual projections.

Violent, sensual, and seemingly un-Japanese, the stories in Season of Violence nevertheless depict Japanese teenagers of the present in compulsive but often unconscious revolt against the moral codes of "old Japan." Yet these stories tell of youth who offer no real, modern morality to replace the old/only the anti-morality of indiscriminate sex, brutality, and living for today's pleasures and sensations. These are stories of teenagers who came to be known as Taiyozoku! the Sun Tribe. Season of Violence won for its young author, Shintaro Ishihara, Japan's coveted Akutagawa Prize. Thus, Season of Violence is a good deal more than fast-moving, forcefully written fiction; it is vital social commentary on contemporary Japan which gives unspoken dimension to the traditional cardboard image of the Japanese student as somber, diligent, and obedient. Ishihara's stories of Japanese who were born in the ashes of war and defeat and raised in the fast-moving world of the postwar boom are stark accounts of a period when the values of the past have been discarded for misguided materialism and pleasure-seeking.

Over a half century of exploration of the Earth's space environment, it has become evident that the interaction between the ionosphere and the magnetosphere plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields. Interestingly, it was recently discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system. Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014, this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm-changing role that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments. The 2014 Chapman conference marks the 40th anniversary of the initial magnetosphere-ionosphere coupling conference at Yosemite in 1974, and thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling processes. Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities. Topics covered in this volume include: Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasma The unified global modeling of the ionosphere and magnetosphere at the Earth and other planets New knowledge of these coupled interactions for heliophysics and planetary scientists, with a cross-disciplinary approach involving advanced measurement and modeling techniques

Magnetosphere-Ionosphere Coupling in the Solar System is a valuable resource for researchers in the fields of space and planetary science, atmospheric science, space physics, astronomy, and geophysics.

The Genius of Japanese Carpentry tells the story of the 1200-year-old Yakushiji monastery in Nara and the dedicated modern-day craftsmen who are working to restore what has been lost to the depredations of time, fire and warfare. Although the full monastery reconstruction will not be completed until 2030, one of the main temples, the Picture Hall, has been completely restored employing the same woodworking technology used to create the original building. This new edition of an architectural classic is by Azby Brown/one of the world's leading experts on Japanese architecture. It contains a new preface and many new text materials and photographs/most of them now available in color for the first time. Azby Brown chronicles the painstaking restoration of the temple through extensive interviews with the carpenters and woodworkers along with original drawings based on the plans of master carpenter Tsunekazu Nishioka. An inspiring testament to the dedication of these craftsmen and their philosophy of carpentry work as a form of personal fulfillment, The Genius of Japanese Carpentry offers detailed documentation of this singular project and a moving reminder of the unique cultural continuity found in Japan.

Book 4 Diamond Patterns

Book 3 Hexagonal Patterns is the third and final book in the Shoji and Kumiko Design series, and follows on seamlessly from Book 2 - Beyond the Basics. In Book 3, Des King gives detailed, step-by-step instructions on making 45 stunning patterns in the hexagonal jigumi arrangement, ranging from the very simple, to the highly complex and extremely difficult. More than 500 photographs and diagrams guide you at each stage on making these patterns using tools found in any Western workshop, and simple shop-made jigs. As with Book 1 and Book 2, no specialised tools are required for any of the patterns covered in Book 3. The patterns in this book are indeed items of art, and can be applied in a broad range of furniture and artistic designs to set your work apart from all others.

This text shows how to use Japanese tools effectively and maintain them properly, and explains the role they play in traditional Japanese craftsmanship. It describes how to create razor-sharp cutting edges and introduces almost 50 different planes.

Written by the authorities in endoscopic surgery, this text presents all diagnostic and therapeutic endoscopic procedures in a single volume. The book covers all applications of this technology with particular emphasis on the role of endoscopy in the care of the individual patient and how the technique complements routine surgical practice. Well illustrated, with over 400 color photographs to aid in the interpretation of the procedures.

The future of music archiving and search engines lies in deep learning and big data. Music information retrieval algorithms automatically analyze musical features like timbre, melody, rhythm or musical form, and artificial intelligence then sorts and relates these features. At the first International Symposium on Computational Ethnomusicological Archiving held on November 9 to 11, 2017 at the Institute of Systematic Musicology in Hamburg, Germany, a new Computational Phonogram Archiving standard was discussed as an interdisciplinary approach. Ethnomusicologists, music and computer scientists, systematic musicologists as well as music archivists, composers and musicians presented tools, methods and platforms and shared fieldwork and archiving experiences in the fields of musical acoustics, informatics, music theory as well as on music storage, reproduction and metadata. The Computational Phonogram Archiving standard is also in high demand in the music market as a search engine for music consumers. This book offers a comprehensive overview of the field written by leading researchers around the globe.
