On the Development of the Understanding

Integrating Ecofeminism, Globalization, and World Religions

Black Diamonds

This book addresses the practical relevance of the interconnection of feminism, ecology, and religious theological thought, and asks questions about the lack of attention to gender issues in both ecological theology and deglobalization theory. The book looks at issues of globalization, interfaith ecological theology, ecofeminism, and deglobalization movements comparatively across different world religions and across

geographical regions. Visit our website for sample chapters! Deane Curtin puts today's most important social and environmental ethical issues into their historical, political, and philosophical contexts, and offers deep insights into the nature of our freedom and its relation to justice in our globalized, commercialized culture. Using familiar literary and historical icons to make surprising points about colonial attitudes and practices, he also demonstrates the unique linkages between colonialism and environmentalism. Using an array of well-documented cases from around the world, *Environmental Ethics for a Postcolonial World* is an accessible and very readable book ideal for students of environmental ethics, globalization, environmental politics, or environmental political theory, as well as for anyone interested in policy and practical options for change.

Written as a series of lectures, *The Ecological Life* offers a humanistic perspective on environmental philosophy that challenges some of the dogmas of deep ecology and radical environmentalism while speaking for their best desires. The book argues that being human-centered leaves us open to ecological identifications, rather than the opposite. Bendik-Keymer draws on analytic and continental traditions of philosophy as well as literature and visual media. He argues for a sense of ecological justice consonant with human rights, and shows how humanistic thinking is committed to deepening respect for life and our ecological orientation. In a clear, jargon-free and conversational tone, *The Ecological Life* presents a timely and important contribution to civic engagement in an ecological century.

First Along the River introduces students to the U.S. environmental movement. Concise, accessible, and informative, this book provides students with a balanced, historical perspective on the history of the environmental movement in relation to major social and political events in U.S. history. The book highlights important people and events, places critical concepts in context, and shows the impact of government, industry, and population on the American landscape. The fourth edition includes a new chapter that covers the entire environmental record of the George W. Bush administration, and the early record of the Obama

administration.

Critical Theories of the State is a clear and accessible survey of radical perspectives on the modern state. By focusing on Marxist theory and its variations, particularly as applied to advanced industrial societies and contemporary welfare states, Clyde W. Barrow provides a more extensive and thorough treatment than is available in any other work. Barrow divides the methodological assumptions and key hypotheses of Marxist, Neo-Marxist, and Post-Marxist theories into five distinct approaches: instrumentalist, structuralist, derivationist, systems-analytic, and organizational realist. He categorizes the many theorists discussed in the book, including such thinkers as Elmer Altvater, G. William Domhoff, Fred Block, Claus Offe, and Theda Skocpol according to their concepts of the state's relationship to capital and their methodological approach to the

state. Based on this survey, Barrow elaborates a compelling typology of radical state theories that identifies with remarkable clarity crucial points of overlap and divergence among the various theories. Scholars conducting research within the rubric of state theory, political development, and policy history will find Critical Theories of the State an immensely valuable review of the literature. Moreover, Barrow's work will make an excellent textbook for undergraduate and graduate courses in political science and sociology, and can also be used by those teaching theory courses in international relations, history, and political economy.

Data Science on the Google Cloud Platform

Forcing the Spring

Discovering Citizenship and a Sense of Humanity

Deep within Crik Wood is a village in which every person has a unique ability called a "Talent." The Mayor can talk to insects, a girl can disappear in a cloud of smoke, and a young boy called Jack has a living shadow. One

thunderous night Jack discovers the horrifying secret buried at the heart of his village. Thrown into an adventure filled with danger and discovery, Jack is faced with the question: 'What would you do if your closest friend was your greatest enemy?' For Jack that someone is his shadow.

Learn how easy it is to apply sophisticated statistical and machine learning methods to real-world problems when you build on top of the Google Cloud Platform (GCP). This hands-on guide shows developers entering the data science field how to implement an end-to-end data pipeline, using statistical and machine learning methods and tools on GCP. Through the course of the book, you'll work through a sample business decision by employing a variety of data science approaches. Follow along by implementing these statistical and machine learning solutions in your own project on GCP, and discover how this platform provides a transformative and more collaborative way of doing data science. You'll learn how to:

- Automate and schedule data ingest, using an App Engine application**
- Create and populate a dashboard in Google Data Studio**
- Build a real-time analysis pipeline to carry out streaming analytics**
- Conduct interactive data exploration with Google BigQuery**
- Create a Bayesian model on a Cloud Dataproc cluster**
- Build a logistic regression**

machine-learning model with Spark Compute time-aggregate features with a Cloud Dataflow pipeline Create a high-performing prediction model with TensorFlow Use your deployed model as a microservice you can access from both batch and real-time pipelines

A Brief History of the U.S. Environmental Movement

The Ecological Life

Originally published in 1993, Forcing the Spring was quickly recognized as a seminal work in the field of environmental history. The book links the environmental movement that emerged in the 1960s to earlier movements that had not previously been defined as environmental. It was the first to consider the importance of race, ethnicity, class, and gender issues in the history and evolution of environmentalism. This revised edition extends the groundbreaking history and analysis of Forcing the Spring into the present day. It updates the original with important new material that brings the book's themes and arguments into the 21st century, addressing topics

such as: the controversy spawned by the original edition with regard to how environmentalism is, or should be, defined; new groups and movements that have formed in the past decade; change and development in the overall environmental movement from 1993 to 2004; the changing role of race, class, gender, and ethnicity in today's environmentalism; the impact of the 2004 presidential election; the emergence of "the next environmentalism." Forcing the Spring, Revised Edition considers environmentalism as a contemporary movement focused on "where we live, work, and play," touching on such hot-button topics as globalization, food, immigration, and sprawl. The book also describes the need for a "next environmentalism" that can address current challenges, and considers the barriers and opportunities associated with this new, more expansive approach. Forcing the Spring, Revised Edition is an important contribution for students and faculty in a wide variety of fields including history, sociology, political science, environmental studies, environmental history, and social movements. It also offers useful context and analysis for anyone concerned with environmental issues.

Capitalizing on Environmental Injustice provides a comprehensive overview of the achievements and challenges confronting the environmental justice movement. Pressured by increased international competition and the demand for higher profits, industrial and

political leaders are working to weaken many of America's most essential environmental, occupational, and consumer protection laws. In addition, corporate-led globalization exports many ecological hazards abroad. The result is a deepening of the ecological crisis in both the United States and the Global South. However, not all people are impacted equally. In this process of capital restructuring, it is the most marginalized segments of society –poor people of color and the working class–that suffer the greatest force of corporate environmental abuses. Daniel Faber, a leading environmental sociologist, analyzes the global political and economic forces that create these environmental injustices. With a multi-disciplinary approach, Faber presents both broad overviews and powerful insider case studies, examining the connections between many different struggles for change. Capitalizing on Environmental Injustice explores compelling movements to challenge the polluter-industrial complex and bring about meaningful social transformation.
