A study of the relationship between platform and creative expression in the Atari VCS. The Atari Video Computer System dominated the home video game market so completely that "Atari" became the generic term for a video game console. The Atari VCS was affordable and offered the flexibility of changeable cartridges. Nearly a thousand of these were created, the most significant of which established new techniques, mechanics, and even entire genres. This book offers a detailed and accessible study of this influential video game console from both computational and cultural perspectives. Studies of digital media have rarely investigated platforms—the systems underlying computing. This book (the first in a series of Platform Studies) does so, developing a critical approach that examines the relationship between platforms and creative expression. Nick Montfort and Ian Bogost discuss the Atari VCS itself and examine in detail six game cartridges: Combat, Adventure, Pac-Man, Yars' Revenge, Pitfall!, and Star Wars: The Empire Strikes Back. They describe the technical constraints and affordances of the system and track developments in programming, gameplay, interface, and aesthetics. Adventure, for example, was the first game to represent a virtual space larger than the screen (anticipating the boundless virtual spaces of such later games as World of Warcraft and Grand Theft Auto), by allowing the player to walk off one side into another space; and Star Wars: The Empire Strikes Back was an early instance of interaction between media properties and video games. Montfort and Bogost show that the Atari VCS—often considered merely a retro fetish object—is an essential part of the history of video games.

The newest darling in the world of baking -- the classic French pastry has been embraced by a whole new generation of bakers. Making this classic at home is much easier than you think. And it's made easy by the fact that it's written by one of Europe's top pastry chefs, Christophe Adam. With its straightforward approach, full color pages and hundreds of step-by-step photos, it's as though Christophe were by your side giving you a lesson in your home kitchen. Over the last dozen years, Christophe has perfected the eclair and has turned it into a gourmet delight which marries unconventional and imaginative fruits, flavors, colors and textures, resulting in luxe eclairs that will have you reaching for seconds and thirds. Christophe has created 25 innovative recipes (both introductory and advanced) that will be perfect for everything from casual gatherings with family and friends, to formal celebrations. With these easy-to-follow instructions and some practice with the basic techniques you'll soon be mastering these recipes as well as inventing new ones of your own. A complete list of utensils, a few simple rules and invaluable tips and techniques are sprinkled throughout and will be hugely appealing to novice and experienced bakers.

Since the first EcoDesign International Symposium held in 1999, this symposium has led the research and practices of environmentally conscious design of products, services, manufacturing systems, supply chain, consumption, as well as economics and society. EcoDesign 2011 - the 7th International Symposium on Environmentally Conscious Design and Inverse Manufacturing - was successfully held in the Japanese old capital city of Kyoto, on November 30th – December 2nd, 2011. The subtitle of EcoDesign 2011 is to "design for value innovation towards sustainable society." During this event, presenters discussed the way to achieve both drastic environmental consciousness and value innovation in order to realise a sustainable society.

The proceedings of ICAR2011 have been published by Springer Lecture Notes in Electrical Engineering, which include 163 excellent papers selected from more than 400 submitted papers. The conference is intended to bring together the researchers and engineers/technologists working in different aspects of intelligent control systems and optimization, robotics and automation, signal processing, sensors, systems modeling and control, industrial engineering, production and management. This part of proceedings includes 81 papers contributed by many researchers in relevant topic areas covered at ICAR2011 from various countries such as France, Japan, USA, Korea and China etc. Many papers introduced their advanced research work recently; some of them gave a new solution to problems in the field, with powerful evidence and detail demonstration. Others stated the application of their designed and realized systems. The session topic of this proceeding is intelligent control and robotics and automation, which includes papers about Distributed Control Systems, Intelligent Fault Detection and Identification, Machine Learning in Control, Neural Networks based Control Systems, Fuzzy Control, Genetic Algorithms, Robot Design, Human-robots Interfaces, Network Robotics, and Autonomous Systems, Industrial Networks and Automation, Modeling, Simulation and Architectures, Vision, Recognition and Reconstruction, Virtual Reality, Image Processing, and so on. All of papers here involved the authors' numerous time and energy, will be proved valuable in their research field. Sincere thanks to the committee and all the authors, moreover anonymous reviewers from many fields and organizations. That is a power for all of us to go on research work for the world.

A backyard anywhere is always fun to explore! When budding naturalists Lucy and Benjamin get a chance to visit their cousin Gabe in Brooklyn, they can't wait. They are used to seeing fascinating animals and plants in the Florida Everglades where they live, but they can't imagine what they will find in Gabe's New York City backyard. The first book in Jeff Corwin's young middle-grade fiction series shows kids that no matter where you live, you can have fun discovering the plants, animals, and natural life around you.
