What the Dog Said

Ever since her police officer father was killed a few months ago, Grace Abernathy hasn't wanted to do much of anything. She's pulled away from her friends, her grades are plummeting . . . it's a problem. The last thing Grace wants is to be dragged into her older sister Regan's plan to train a shelter dog as a service dog. But Grace has no idea how involved she'll get-especially when a mangy mutt named Rex starts talking to her. Has Grace gone off the deep end? Or might this dog be something really special-an angel? A spirit? Either way, he is exactly the therapy that Grace needs.

Major Problems in American History Since 1945

Today's highly capitalized societies require maximum benefit with minimum cost. In order to find a low cost design in practice, experienced engineers have traditionally used trial-and-error methods based on their intuitive engineering sense. However, their approaches have not guaranteed optimal or near-optimal designs, which is why researchers have been interested in optimization methods. Mathematically speaking, optimization refers to finding the best vector from a set of feasible alternative vectors. Civil engineering, which includes structural engineering, geotechnical engineering, water resources engineering, environmental engineering, transportation engineering, and construction management, can be an industrial sector which derives great benefit from the optimization because these techniques can Save a lot of costs in public infrastructure construction and management that require enormous budget. Thus, this book intends to show a big picture how the optimization techniques can be applied to various civil engineering problems in 1) construction and project management, 2) structural engineering, 3) water and environmental engineering, and 4) transportation engineering.
