“Upper Beginner” books. Next, progress to the “Intermediate” series, then test and reinforce your knowledge with the “Conversations” series. Our experienced educators and speakers possess the linguistic skills to help you understand and speak Spanish clearly. We are very proud to have developed a product that truly helps you learn Spanish quickly and easily, anytime and anywhere. This audiobook is divided into units. While it provides different learning patterns and accommodates various needs, this audiobook focuses on helping you improve your ability

to understand, speak, and memorise Spanish. The sample will give you a taste of what you can look forward to. In Unit 1 you will hear Spanish decoded with each syllable spoken very slowly and clearly with repetition. Immediately before each sentence is spoken, you will hear the translation, so you will always understand what is being said. Unit 2 focuses solely on increasing your listening ability, which will improve your abilities to engage in dialogue with a native Spanish speaker. This chapter requires you to listen very carefully to nuances in the language. By Unit 3 you will

already notice progress in your abilities to speak and understand Spanish. The spoken translation is followed by two repetitions in Spanish at a completely natural speed. While you are learning to process naturally spoken Spanish, Units 3 and 4 will help you memorise new vocabulary and full sentences. In Unit 5 you can test yourself on how much you have learned. If you are having difficulties, we suggest you revisit the listening, speaking, or memorisation section of Units 1, 2 3 or 4, according to what you need more help with. Negotiating a Conversation*The approach this course uses recognizes that it takes new Spanish speakers years to become fluent. However, if a nurse learns the medical vocabulary and strategies to properly negotiate a conversation, (s)he can learn to work through virtually any situation in a relatively short period of time. For example, if a patient says something a

nurse doesn't understand, the nurse can ask them to repeat it or say it slower. If a nurse doesn't know how to say something, (s)he can point to it and ask ¿Cómo se dice? (How do you say that.) These and many other techniques that are taught to help a nurse work through new situations.

Use of Technology
The use of technology can be very helpful to get through tricky situations. However, if a nurse only uses technology, this provides a poor patient experience and demonstrates poor bedside manner. Also, if only technology is used, body language and gestures are

missed and the meaning can be misinterpreted. It is recommended that the nurse continue learning as much as possible using this course and software, then use technology to fill in the gap. Learn More about the AuthorsTake a "Look Inside" the textbook (at the left) to learn more.

scores and a lack of meaningful connections between parents, students, and teachers. The research question was, How does customized parent-teacher communication about student learning impact student achievement? Customized communication is a blending of Epstein ' s (1995) Type 2 communicating and Type 4 learning at home. To improve student achievement via improving parent-teacher communication, customized communication took the form of a weekly newsletter. The study took place at one high school located in Southern California.

Spanish 1 and 2 classes and their parents were part of the study. Before intervention, a chapter test served as a pretest to provide class test averages and revealed similarity among the control and experimental classes. Parents were surveyed to gather the type of desired communication they wanted in a newsletter. Intervention was given in the form of weekly newsletters to two experimental classes using customized communication about student learning. Finally, a chapter test served as a post-test to reveal any changes in class test score averages as a result of

customized communication. A quantitative methodology was used. Data were collected and analyzed through student pretest averages, a parent survey, and student post-test averages. Through personal communication, parents expressed positive perceptions of the intervention. However, a t-Test to compare pre and post test averages, revealed that the null hypothesis must be rejected. There was no significant change in test averages as a result of the intervention. This study could be expanded with more time to see if more customized-
