Publisher description

Birding is one of the most popular and fastest-growing outdoor activities, but it can seem intimidating for beginners who don't know where, when, or how to search for birds. Fortunately, Pete Dunne, one of the most popular and respected writers in the field, has written a guide that will help even the most casual observers identify the skills and tools they need to develop their interest in birding. • Popular how-to guide revised, updated, and now with color photos • For beginners and birders who want to improve their skills • Improve your odds of success with tips to get the most out of your equipment

A scientifically based herbal and nutritional program to master stress, improve energy, prevent degenerative disease, and age gracefully • Explains how adaptogenic herbs work at the cellular level to enhance energy production and subdue the pro-inflammatory state behind degenerative disease • Explores the author's custom adaptogenic blends for the immune system, cardiovascular health, thyroid function, brain health, and cancer treatment support • Provides more than 60 monographs on herbs and nutritional compounds based on more than 25 years of clinical practice with thousands of patients Weaving together the ancient wisdom of herbalism and the most up-to-date scientific research on cancer, aging, and nutrition, renowned medical herbalist and clinical nutritionist Donald Yance reveals how to master stress, improve energy levels, prevent degenerative disease, and age gracefully with the elite herbs known as adaptogens. Yance's holistic approach, called the Eclectic Triphasic Medical System (ETMS), is based on extensive scientific research, more than 25 years of clinical practice, and excellent results with thousands of patients. It centers on four interconnected groups of health tools: botanical formulations, nutritional supplements, diet, and lifestyle. Defining three categories for adaptogenic herbs, he explains how formulations should combine herbs from each category to create a synergistic effect. He provides more than 60 monographs on herbs and nutritional compounds as well as custom combinations to revitalize the immune system, build cardiovascular health, protect brain function, manage weight, and support cancer treatment. He explains the interplay of endocrine health, the hypothalamic-pituitary-adrenal (HPA) axis, thyroid function, and stress in the aging process and reveals how adaptogenic treatment begins at the cellular level with the mitochondria--the microscopic energy producers present in every living cell. Emphasizing spirituality, exercise, and diet in addition to herbal treatments and nutritional supplements, Yance's complete lifestyle program explores how to enhance energy production in the body and subdue the proinflammatory state that lays the groundwork for nearly every degenerative disease, taking you from merely surviving to thriving.

The document lists Quinn's mother as the owner of some land on the outskirts of Chestnut Station, but Georgeanne refuses to discuss it. **8 LETTERS, STARTS WITH "S"** Quinn visits the site, located near a World War II Japanese internment camp that's since been turned into a museum. There she unearths a weathered Japanese doll...and a skeleton. Before she can uncover a killer, she has to identify the victim. Was it an inmate trying to escape? A guard? Or someone closer to home? As Quinn fills in the blanks, she finds an unexpected link between her family and Chief Chestnut's--one that could spell more deadly trouble... **"FRESH, FAST, AND FURIOUSLY FUN . . .** Becky Clark writes with wry wit, a keen eye, and no shortage of authority." --Brad Parks, Shamus Award-winning author on *Fiction Can Be Murder* Includes original crossword puzzles!

Birds are among the most extensively studied of all animal groups. Hundreds of academic journals and thousands of scientists are devoted to bird research, while amateur enthusiasts (called birdwatchers or, more commonly, birders) probably number in the millions. Birds are categorised as a biological class, Aves. The earliest known species of this class is Archaeopteryx lithographica, from the Late Jurassic period. According to the most recent consensus, Aves and a sister group, the order Crocodilia, together form a group of unnamed rank, the Archosauria. Phylogenetically, Aves is usually defined as all descendants of the most recent common ancestor of modern birds (or of a specific modern bird species like *Passer domesticus*), and Archaeopteryx. Modern phylogenies place birds in the dinosaur clade Theropoda. Modern birds are divided into two superorders, the Paleognathae (mostly flightless birds like ostriches), and the wildly diverse Neognathae, containing all other birds.
