

Stcw Advanced Fire Fighting Manual

The model course includes introductory classroom instruction on the assessment, examination and certification of seafarers (in particular masters, chief engineers, deck and engineer officers), covering the provisions for training, assessment, examination and certification of masters, officers and ratings of the STCW Convention; the implementation of these provisions under national law; the selection of assessment methods; the organization of assessments, and the issue and control of certificates.

A comprehensive training and reference manual used as a textbook in maritime institutions. Addresses the prevention, control, and extinguishing of fires aboard commercial vessels and on offshore drilling rigs. Includes chapters on emergency procedures and equipment as well as case studies of past shipboard fires. Generously illustrated with drawings, photos, diagrams, tables, and checklists. Recommended reading for all maritime personnel and kept both in shipboard reference libraries and in the offices of maritime executives.

The International Code for Fire Safety Systems (FSS Code) was adopted by the Maritime Safety Committee (MSC) at its seventy-third session (December 2000) by resolution MSC.98(73) in order to provide international standards for the fire safety systems and equipment required by chapter II-2 of the 1974 SOLAS Convention. The Code is made mandatory under SOLAS by amendments to the Convention adopted by the MSC at the same session (resolution MSC.99(73)) and entered into force on 1 July 2002. The MSC adopted amendments to chapters 4, 5, 6, 7 and 9 of the Code by resolutions MSC.206(81) and MSC.217(82). These new amendments are expected to be accepted on 1 January 2008 and 1 January 2010, as applicable, and enter into force on 1 July 2008 and 1 July 2010, as applicable. The amendments to the aforementioned chapters, as adopted by resolutions MSC.206(81) and MSC.217(82), are contained in pages 351-365 for information purposes

only. In order to make this publication as comprehensive as possible for use by equipment and systems manufacturers, shipowners and operators, shipyards, classification societies and Administrations, all related fire safety standards and guidelines adopted by either the Assembly or the MSC and referred to in the FSS Code have been incorporated, as appropriate, in this publication for the guidance and convenience of users.

This model course is intended to provide the knowledge required for seafarers with designated security duties in connection with a Ship Security Plan (SSP) to perform their duties in accordance with the requirements of chapter XI-2 of SOLAS 74 as amended, the ISPS Code, and section A-VI/6 of the STCW Code, as amended. Those who successfully complete the course should be able to demonstrate sufficient knowledge to undertake the duties assigned under the SSP.

Command Companion of Seamanship Techniques

Este libro es un manual indispensable para el aprendizaje de Inglés marítimo en los ciclos formativos de la familia profesional Marítimo-pesquera y en el Grado en Náutica y Transporte Marítimo. Además, constituye un método ideal para el autoaprendizaje y la preparación de las pruebas teórico-prácticas necesarias para la obtención de titulaciones de recreo como Capitán de yate. Inglés técnico marítimo contribuye a mejorar las radiocomunicaciones marítimas en inglés. A través de sus numerosos ejemplos prácticos y

ejercicios, los estudiantes se familiarizarán con las frases normalizadas para las comunicaciones marítimas de la OMI (SMCP) y con publicaciones náuticas como derroteros y avisos a navegantes. La obra se complementa con un amplio Anexo que incluye: un resumen gramatical, que servirá de soporte a las comunicaciones verbales y a la interpretación de publicaciones náuticas; un extenso glosario inglés-español, español-inglés con un listado de siglas y acrónimos, que dará respuesta a muchas de las dudas que se le planteen relacionadas con el Inglés marítimo; y, además, información muy útil como las escalas Beaufort y Douglas, nomenclatura de luces y señales de niebla y la traducción de los certificados de especialidad de STCW. Al final del libro se incluyen 100 ejemplos de preguntas tipo test que serán de gran utilidad para la preparación de exámenes como el de Capitán de yate, según se establece en el R. D. 875/2014, de 10 de octubre, que regula las titulaciones náuticas para el gobierno de embarcaciones de recreo. Las soluciones a todos los ejercicios se encuentran disponibles previo registro en www.paraninfo.es y en la página web www.inglesmaritimo.com, junto a los archivos de audio y podrán escucharse directamente desde el enlace o descargarse en cualquier dispositivo de almacenamiento. En definitiva, Inglés técnico marítimo es en la actualidad el manual más completo dirigido a hispanohablantes. Será un buen compañero de travesía que, sin duda, ayudará a todas las personas interesadas a desenvolverse en muchas situaciones de comunicación en el desarrollo de la actividad marítima.

Amendment to 2015 consolidated ed. (ISBN 9780115534027).

Amendment consists of loose-leaf pages that replace select pages from the main edition binder

This study guide has been produced to complement the training text, Marine Fire Prevention, Fire-fighting, and Fire Safety, published by the U.S. Department of Transportation, Maritime Administration. Although the basic principles in marine fire-fighting have not changed, this study guide offers up-to-date information for a better understanding of the principles and the methodologies involved. In addition, this study guide includes all the contents required for a U.S. Coast Guard-approved marine fire-fighting course, as well as meets all the competencies for the International Convention for the Standards of Training, Certification, and Watchkeeping (STCW), per the

latest 2010 Manila amendments. Moreover, this study utilises current-day examples, equipment, and techniques, breaking down the text into twelve easy-to-follow lessons: basic shipboard fire-fighting organisation and safety, causes of fires and methods of prevention, theories of fire, combating fire, extinguishing agents, extinguishing appliances, fire detection systems, fixed fire extinguishing systems, safety and fire-fighting equipment, and respirators and the self-contained breathing apparatus. These lessons will provide the students the knowledge to not only successfully fight shipboard fires, but prevent such fires and in doing so, keep his/her ship and all that ply the seas onboard safe.

The Command Companion of Seamanship Techniques is the latest work from the well-respected marine author, D J House. It contains all the information needed for command posts at sea. · All aspects of shipboard management are discussed, with special emphasis placed on health and safety. · Guidelines on how to respond to accidents and emergencies at sea · Contains the most recent SOLAS revisions and a discussion of marine law to keep you up to date with the latest rules and regulations. In order to aid learning, the book includes a number of worked examples in the text along with questions and answers at the end of chapters. The author tells you how to respond to accidents and emergencies at sea, in the event, for example of cargo contamination, collision, loss of stability due to cargo shift and damage due to flooding, fire plus loss of life/crew. In addition, the SOLAS revisions and a discussion of marine law is included to keep you up to date with all the latest rules and regulations. In order to aid learning, this book will include a number of worked examples in the text along with questions and answers at the end of chapters. D J House is senior lecturer in Nautical studies at the Nautical college, Fleetwood. His sea-going experience includes general cargo, reefer, bulk cargo, passenger and liner trades, underwater operations, and roll-on/roll-off ferries. He is a well-known marine author and has written Seamanship Techniques Volumes 1 and 2 (combined) and he has revised Cargo Work in the Kemp & Young series.

The aim of this model course is to meet the mandatory minimum standards of

competence for seafarers as electro-technical ratings, in the following functions: electrical, electronic and control engineering; maintenance and repair; and controlling the operation of the ship and care for persons on board, at the support level specified in table A- III/7 of the STCW Code

Stcw-95;Guide for Seafarers

Since the Titanic disaster of 1912, the horrors of major maritime casualties have prompted international conventions and domestic legislation, but the link between events and outcomes (which are often separated by many years) is rarely understood by those working in the maritime industry. This book, the only comprehensive guide to this link, sets forth the major casualties of the last hundred years and explains resulting regulatory changes. Taking a macro-level view, it describes the trends and reactions across decades, and how, over time, focus has shifted from equipment failures to people and their behaviours as the primary cause of maritime casualties. Timely and thorough, it also explores the alarming increase in the criminalization of maritime accidents, especially the relatively recent reclassification of pollution incidents as "environmental crimes". This book offers broad insight to the history, laws, and conventions that regulate worldwide commercial maritime activity. This book and CD-ROM set contains a list of major ship fires which have occurred since 1800. These are fully indexed and can be searched

on disc, as can the book itself. A further use of this facility is the ability to call up legislation relating, for example, to a fixed fire-fighting system required for machinery space, or cargo hold protection.
