Assessment innovation tied to technology is greatly needed in a wide variety of assessment applications. This book adopts an interdisciplinary perspective to learn from advances in developing technology enhanced innovative assessments from multiple fields. The book chapters address the development of virtual assessments including game-based assessment, simulation-based assessment, and narrative based assessment as well as how simulation and game based assessments serve both formative and summative purposes. Further, chapters address the critical challenge of integrating assessment directly into the learning process so that teacher effectiveness and

student learning can be enhanced. Two chapters specifically address the psychometric challenges related to innovative items. One chapter talks about evaluating the psychometric properties of innovative items while the other chapter presents a new psychometric model for calibrating innovative items embedded in multiple contexts. In addition, validity issues are addressed related to technology enhanced innovative assessment. It is hoped that the book provides readers with rich and useful information about the development of several types of virtual assessments from multiple perspectives. The authors include experts from industry where innovative items have been used for many years and experts from research institutes and universities who have done pioneering work

related to developing innovative items with formative applications to facilitate learning. In addition, expert advice has been provided on validating such work.

You'll be able to develop the skills you need to apply SAS in your working environment. Biomass can be used to produce renewable electricity, thermal energy,

transportation fuels (biofuels), and high-value functional chemicals. As an energy source, biomass can be used either directly via combustion to produce heat or indirectly after it is converted to one of many forms of bioenergy and biofuel via thermochemical or biochemical pathways. The conversion of biomass can be achieved using various advanced methods, which are broadly classified into thermochemical conversion, biochemical conversion, electrochemical conversion, and so on. Advanced development technologies and processes are able to convert biomass into

alternative energy sources in solid (e.g., charcoal, biochar, and RDF), liquid (biodiesel, algae biofuel, bioethanol, and pyrolysis and liquefaction bio-oils), and gaseous (e.g., biogas, syngas, and biohydrogen) forms. Because of the merits of biomass energy for environmental sustainability, biofuel and bioenergy technologies play a crucial role in renewable energy development and the replacement of chemicals by highly functional biomass. This book provides a comprehensive overview and in-depth technical research addressing recent progress in biomass conversion

processes. It also covers studies on advanced techniques and methods for bioenergy and biofuel production.

Data analysis is an important part of modern business administration, as efficient compilation of information allows managers and business leaders to make the best decisions for the financial solvency of their organizations.

Understanding the use of analytics, reporting, and data mining in everyday business environments is imperative to the success of modern businesses. Applying

Business Intelligence Initiatives in Healthcare and Organizational Settings incorporates emerging concepts, methods, models, and relevant applications of business intelligence systems within problem contexts of healthcare and other organizational boundaries. Featuring coverage on a broad range of topics such as rise of embedded analytics, competitive advantage, and strategic capability, this book is ideally designed for business analysts, investors, corporate managers, and entrepreneurs seeking to advance their understanding and practice of business intelligence.

Diploma Thesis from the year 2015 in the subject Economics - International Economic Relations, grade: 1,3, University of Leipzig, language: English, abstract: The Association Agreement, which was signed between the European Union and Ukraine in 2014, opened a big

discussion about new challenges in Europe. Many European countries signed similar Agreements and became very quickly thereafter full members of the EU. Nowadays there are a lot of opinions and myths about what exactly the Ukrainian Association is, and, in general, where it should bring Ukraine and Europe. This research paper explores the objectives pursued by the EU and Ukraine by the time they signed the Agreement. It provides a full analysis and interpretation of its content and describes how Ukrainian attempt to get closer to the European Union changed the geo-political situation in Europe. This paper is important as it will cast in light the background of the present tragical events in Ukraine and will provide deeper knowledge about the situation. The main hypotheses of this work are as follows: 1. The Association Agreement between Ukraine and the EU

does not give any guarantees for the accession to the EU and could only be seen as the basis of a prospective future membership. 2. The access to the European integration of Ukraine in the EaP is precluded because of inflexible and "naive" policy of the EU. The ENP has failed and needs to be reconsidered. 3. Russian permanent intervention in the policy decision-making of Ukraine slows down its integration towards Western Europe. The paper will be a mixture of description and "data followed by analysis", going gradually more in depth from the negotiation process to the conclusion of the AA between Ukraine and the EU. To make the argument easy to follow, chronological analysis will be used in dealing with the interval of 2007-2015 (from the beginning of negotiations to the implementation process of the AA). This book presents the latest tools,

techniques, and solutions that decision makers use to overcome the challenges faced by their sustainable supply chains. Given the ever increasing significance of socio-economic and environmental factors, the management of sustainable supply chains has become a complex and dynamic task. Multiple and conflicting objectives of stakeholders including suppliers, manufacturers, service providers, and retailers add to the complexity of decisions that modern day managers of supply chains face. With the unprecedented technological developments and innovations at hand, sustainability can be maximized for all the activities of a supply chain including: service concept and product design, material sourcing and procurement, manufacturing processes, delivery of the final product, and end-of-life management of the product. Consequently, the

sustainable supply chains' problems require a systematic and integrated approach. Modeling and simulation, in general, as well as system dynamics and agent-based modeling, in particular, have the capabilities to deal with the complexity of sustainable supply chain related problems. This book will appeal to professionals and researchers in the field. The report was written by senior scholars of international studies and Indian Ocean studies and focuses on international relations in Indian Ocean region and covers many aspects of "Indo-Pacific". Background Papers on The IMF and the Crises in Greece, Ireland, and Portugal
Biomass Processing for Biofuels, Bioenergy and Chemicals

Library Lin's Curated Collection of Superlative Nonfiction

This volume book brings together nine background papers prepared for an evaluation by the

IMF Independent Evaluation Office of "the IMF and the crises in Greece, Ireland, and Portugal." It presents an authoritative work on the evolving relationship between the IMF and the euro area, a common currency area founded in 1999 consisting of advanced, highly integrated economies in Europe. The euro area, or any common currency area for that matter, has posed challenges to the IMF's operational activities as its Articles of Agreement contain no provision for joint membership. The challenges became intense when a series of crises erupted in Greece, Ireland, and Portugal from 2009 to 2011, and the Fund

was called upon to help intervene by offering its financing and crisis management expertise. The IMF found itself in uncharted territory where there was no precedent or established procedure. The chapters, many of which are prepared by prominent academics and former senior IMF officials who are thoroughly familiar with internal procedures, discuss various aspects of the IMF's engagement with the euro area, including precrisis surveillance, how key decisions were made, how the IMF collaborated with European institutions, and how it designed and implemented its lending programs with the three

crisis countries. The book gives prominence to governance-related issues, given the large voting share (of more than 20 percent) within the IMF of euro area members and the subsequent public perception that the IMF treated the euro area more favorably than it does developing and emerging market members. The approaches are both cross-cutting and country-based. Some chapters deal with issues related to the euro area as a whole, while others focus on how the Fund engaged with individual euro area countries. The book contains a statement on the IEO evaluation by the IMF Managing Director and a

Summing Up of the Executive Board discussion held in July 2016.

This volume provides a pluralistic discussion from world-renowned scholars on the international aspects of the debt crisis and prospects for resolution. It provides a comprehensive evaluation of how the debt crisis has impacted Western Europe, the emerging markets and Latin America, and puts forward different suggestions for recovery.

This book explores the unfinished India-Pakistan Trade normalisation agenda (building upon the themes covered in the book "India-Pakistan Trade:

Strengthening Economic Relations" published by Springer in 2014) and discusses the steps that must be undertaken in order to move the bilateral engagement forward. Given the commencement of bilateral state-level talks and the Indian government's emphasis on South Asian integration, it adds impetus to the trade liberalisation process, while also providing essential recommendations for policymakers in both countries. The unfinished agenda faces obstacles such as the list of items for which export from India to Pakistan continues to be restricted; lack of land borders

and seamless cross-border transport services, which hampers the realisation of trade potential; negative reporting in the media, which influences traders' perceptions; and the continued occurrence of informal trade resulting from inadequacies of formal trade relations. The book examines various sectors, including the agricultural, textiles, automotive and pharmaceutical industries, given their predominance on the list of restricted items for bilateral trade. It also covers studies on unconventional and under-researched themes concerning informal trade, informational barriers to

India–Pakistan trade, and opening new land borders for trade – all of which can play a facilitating role in realizing the untapped trade potential between India and Pakistan. The book also includes the second round of the India–Pakistan trade perception survey, which identifies impediments to India–Pakistan bilateral trade and assesses the change in traders' perceptions since the first round of the survey, which was published in 2014.

This book addresses the

impacts of various types of services such as infrastructure, platforms, software, and business processes that cloud computing and Big Data have introduced into business. Featuring chapters which discuss effective and efficient approaches in dealing with the inherent complexity and increasing demands in data science, a variety of application domains are covered. Various case studies by data management and analysis experts are presented in these chapters. Covered

applications include banking, social networks, bioinformatics, healthcare, transportation and criminology. Highlighting the Importance of Big Data Management and Analysis for Various Applications will provide the reader with an understanding of how data management and analysis are adapted to these applications. This book will appeal to researchers and professionals in the field. Parallaxic Praxis is a research framework utilized by interdisciplinary teams to collect, interpret,

transmediate, analyze, and mobilize data generatively. The methodology leverages the researchers' personal strengths and the collective expertise of the team including the participants and community when possible. Benefits include the use of multi-perspective analyses, multi-modal investigations, informal and directed dialogic conversations, innovative knowledge creation, and models of residual and reparative research. Relying on difference, dialogue, and creativity propulsion

processes; and drawing on post-qualitative, new materiality, multiliteracies, and combinatorial, even juxtaposing theoretical frames; this model offers extensive research possibilities across disciplines and content areas to mobilize knowledge to broad audiences. This book explains methods, theories, and perspectives, and provides examples for developing creative research design in order to innovate new understandings. This model is especially useful for interdisciplinary

partnerships or cross-sector collaborations. This book specifically addresses issues of research design, methodology, knowledge generation, knowledge mobilization, and dissemination for academics, students, and community partners. Examples include possibilities for scholars interested in doing projects in social justice, community engagement, teacher education, Indigenous research, and health and wellness.

This interdisciplinary

volume offers a timely reflection on law, development and economics through empirical and comparative perspectives on contemporary Myanmar. The book explores the business that takes place in times of major political change through law and development initiatives and foreign investment. The expert contributors to this volume identify the ways in which law reform creates new markets, embodies hopes of social transformation and is animated by economic gain.

This book is an invitation to think carefully and critically about the intersection between law, development and economics in times of political transition. The chapters speak to a range of common issues - land rights, access to finance, economic development, the role of law including its potential and its limits, and the intersection between local actors, globalised ideas and the international community. This interdisciplinary book is for students, scholars and practitioners of law and

development, Asian studies,

targets for clinical applications, food safety, and environmental monitoring. Other nanoscale biological particles, including liposomes, micelles, and functionalized polymeric particles are widely used in nanomedicines. The recent deveopment of microfluidic and nanofluidic technologies has enabled the separation and anslysis of these species in a lab-on-a-chip platform, while there are still many challenges to address before these analytical tools can be adopted in practice. For example, the complex matrices within which these species reside in create a

high background for their detection. Their small dimension and often low concentration demand creative strategies to amplify the sensing signal and enhance the detection speed. This Special Issue aims to recruit recent discoveries and developments of micro- and nanofluidic strategies for the processing and analysis of biological nanoparticles. The collection of papers will hopefully bring out more innovative ideas and fundamental insights to overcome the hurdles faced in the separation and detection of bionanoparticles. Report discusses the findings and recommendations made by the IMF mission to assist Costa Rica in delivering sound financial sector reform in support of financial stability. It was found that despite progress, the financial stability framework in Costa Rica is not well prepared to handle a potential systemic financial crisis without seriously compromising fiscal resources. Supervision of the financial sector is becoming risk-based and intensive, but it lacks key legal powers, tools, and responsibilities for the effective oversight of institutions and markets.

Serious vulnerabilities in the pension sector, the secondary markets, and financial-crisis safety nets need urgent attention.

The sustainable use of natural resources is an important global challenge, and improved metal sustainability is a crucial goal for the 21st century in order to conserve the supply of critical metals and mitigate the environmental and health issues resulting from unrecovered metals. Metal Sustainability: Global Challenges, Consequences and Prospects discusses important topics and challenges associated with sustainability in metal life cycles, from mining ore to beneficiation processes, to product

manufacture, to recovery from end-of-life materials, to environmental and health concerns resulting from generated waste. The broad perspective presented highlights the global interdependence of the many stages of metal life cycles. Economic issues are emphasized and relevant environmental, health, political, industrial and societal issues are discussed. The importance of applying green chemistry principles to metal sustainability is emphasized. Topics covered include: • Recycling and sustainable utilization of

precious and specialty metals • Formal and informal recycling from electronic and other high-tech wastes • Global management of electronic wastes • Metal reuse and recycling in developing countries • Effects of toxic and other metal releases on the environment and human health • Effect on bacteria of toxic metal release • Selective recovery of platinum group metals and rare earth metals • Metal sustainability from a manufacturing perspective • Economic perspectives on sustainability, mineral development, and metal life cycles • Closing the Loop -

Minerals Industry Issues The aim of this book is to improve awareness of the increasingly important role metals play in our high-tech society, the need to conserve our metal supply throughout the metal life cycle, the importance of improved metal recycling, and the effects that unhindered metal loss can have on the environment and on human health.

This volume presents current developments in the fields of banking and finance from an international perspective. Featuring contributions from the 4th International Conference on Banking and Finance Perspectives (ICBFP), this volume serves as a valuable forum for discussing current issues and trends in the banking and financial sectors, especially in light of the global economic challenges triggered by financial institutions. Using the latest theoretical models, new perspectives are brought to topics such as international banking and finance, Islamic banking, fintech, and corporate finance. Offering an opportunity to explore the challenges of a rapidly changing industry, this volume will be of interest to academics, policy makers,

and scholars in the fields of banking, insurance, and finance.

Organised civil society in Greece is generally regarded as weak with rankings for associational density, volunteerism and levels of social capital traditionally among the lowest in Europe. *Austerity and the Third Sector in Greece* explores the context behind the statistics and general perceptions of a society of takers, not givers.

Stereotypes of a country living beyond its means have been exacerbated by the Eurozone crisis but, since 2008, there has in fact been a great proliferation of organised civil society initiatives in the country. Has the financial crisis seen a belated awakening of Greek civil society? Offering a broad overview of contemporary civil society in Greece

this book explores how various characteristics of the country's socio-political context have affected the development of the third sector and examines the effect of the economic crisis on it. Expert contributors combine macro-level analyses with local case studies to form a fascinating new study on the influences of national and regional context on civil society development. Their findings provide not only for a better understanding of similar movements, but also contribute to wider academic debates on societal responses to economic crises.

This open access book provides a broad context for the

understanding of current problems of science and of the different movements aiming to improve the societal impact of science and research. The author offers insights with regard to ideas, old and new, about science, and their historical origins in philosophy and sociology of science, which is of interest to a broad readership. The book shows that scientifically grounded knowledge is required and helpful in understanding intellectual and political positions in various discussions on the grand challenges of our time and how science makes impact on society. The book reveals why interventions that look good or

even obvious, are often met with resistance and are hard to realize in practice. Based on a thorough analysis, as well as personal experiences in aids research, university administration and as a science observer, the author provides - while being totally open regarding science's limitations- a realistic narrative about how research is conducted, and how reliable 'objective' knowledge is produced. His idea of science, which draws heavily on American pragmatism, fits in with the global Open Science movement. It is argued that Open Science is a truly and historically unique movement in that it translates the analysis of the problems of

science into major institutional actions of system change in order to improve academic culture and the impact of science, engaging all actors in the field of science and academia.

In this book, leading scholars analyze the important role played by copyright exceptions in economic and cultural productivity.
