How to identify, analyse, and assess the various types of adult learning needs? How to develop programmes tailored to these needs? This study guide is written for postgraduate students preparing to become professional adult educators, as well as for those intending to plan educational programmes for adults. The book covers the various types of adult (learning)needs and provides hints on how to identify, analyse, and assess these needs. It presents typical challenges involved in performing such an analysis as well as theoretical considerations of the concept and types of needs, of diagnosing educational needs and their theoretical understanding. The author draws conclusions on how to develop programmes tailored to the needs identified. With a focus on practical concerns, she illustrates the necessary steps as well as the factors to be considered when designing an educational programme for adults, both in the planning stage and in the stages of implementation and evaluation. Fundamentals of Logic Design

Catalog of Copyright Entries. Third Series

***Updated with modern coverage, a streamlined presentation, and excellent companion software, this seventh edition of FUNDAMENTALS OF LOGIC DESIGN achieves yet again an unmatched balance between theory and application. Authors Charles H. Roth, Jr. and Larry L. Kinney carefully present the theory that is necessary for understanding the fundamental concepts of logic design while not overwhelming students with the mathematics of switching theory. Divided into 20 easy-to-grasp study units, the book covers such fundamental concepts as Boolean algebra, logic gates design, flip-flops, and state machines. By combining flip-flops with networks of logic gates, students will learn to design counters, adders, sequence detectors, and simple digital systems. After covering the basics, this text presents modern design techniques using programmable logic devices and the VHDL hardware description language.
