might there be life
stranger than the

there be, somewhere,
another kind of life
entirely? In fact,
scientists have

hypothesized life
that uses ammonia
instead of water, life
based not in carbon
but in silicon, life
driven by nuclear
chemistry, and life
whose very atoms
are unlike those in
life we know. In
recent years some
scientists have begun

One of the very best
must-read SF novels of
all time.

In the pantheon of air
power spokesmen,
Giulio Douhet holds
center stage. His
writings, more often
cited than perhaps
actually read, appear as
excerpts and aphorisms
in the writings of
numerous other air
power spokesmen,

advocates-and critics.

Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point

where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom"

Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. published in 1921.

Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision—that command of the air is all important in modern warfare—has been proven throughout the history of wars in this century,
