***YOU CAN BE GREAT! Optimum Drive is the complete step-by-step guide to maximizing human performance in any endeavor you choose to conquer Why you should read Optimum Drive • This book is not just about learning how to drive race cars, that is just the ideal metaphor since racing has captured more information on the topic than most sports combined. Use it for anything. • Auto Racing (by far the richest sport in the world) has invested more money evaluating human performance than any other sport. So even if you don't follow motorsports there is much to learn if you are interested in unlocking your hidden potential. • Optimum Drive does not shy away (it specifically focuses on) the uncomfortable aspects of why people stagnate well before their potential is realized and provides a precise, step-by-step guide to unlock that hidden potential. • Optimum Drive is unique in that the author (former Top Gear US Stig, Paul F. Gerrard) is not just a typical "expert" who externally studies the subject he writes about. He has taught and refined the principles for over 20 years with thousands of successful students. He has also personally used the principles to achieve the potential (in all of us) that the book bluntly promises. The book was actually written while in the flow state that is at the very core of Optimum Drive. • Optimum Drive fully embraces the human factors that involve learning. We are not robots, we are complex with unique***

***perspectives on just about everything. This book will make you better because it steadfastly refuses to conveniently ignore why we actually stop improving. • Optimum Drive is an unblinking stare into the void. Cheerfully written but serious in its intent. We, as humans, are controlled (and comforted) by our self-imposed limitations, yes todays coddling contentment locks us down, simultaneously killing our dreams along with our potential. Interestingly we can feel this truth so...stare into the void. The best of you is hiding in there...waiting. Attaining peak performance: Optimum Drive is a motivational book that uses top level race car driving as a metaphor for peak performance. As a professional racing driver himself as well a driving coach for over 20 years, the author Paul F. Gerrard has penned his unique perspective on what causes people to stagnate with the idea of being merely good, when each of us has the potential to be great. Gerrard believes that peak performance is within our grasp. He lays out his step-by-step process for attaining peak performance with detailed nuance threaded throughout. If you have ever been curious about maximizing your own ultimate potential, Optimum Drive is for you! Mental toughness: Greatness is as hard to quantify as it is to achieve...probably not a coincidence. In this debut book, Optimum Drive, professional driver Gerrard helps you understand the mental toughness that it takes to reach that greatness. He starts off by taking you onto the track as he explores what driving at 200 mph can teach us about who we are. Using his***

*experiences from behind the wheel at death-defying speeds, Gerrard breaks down the psychology of driving, what it takes, and how we can use it to achieve greatness in life. Flow psychology and staying in the zone: The key to the mental toughness that Gerrard believes it takes to achieve peak performance is the nirvana-like sensation of flow psychology or being in the zone. Flow psychology, or being in the zone, is a mental state in which one who is performing an activity is fully immersed in a feeling of energized focus, full involvement, and joy. It is through flow psychology that Gerrard introduces a blend of holistic mindset combined with a competitive edge, which is essential to successful professional driving. This mix of guts, tenacity and endurance is the foundation of Gerrard's philosophy for attaining greatness. Natural vs. earned talent; After flow psychology, you will learn about natural vs earned talent and how the way we drive is representative of who we are. From braking, cornering and accelerating to anticipation vs. reaction, refining a process that defines our greatness in or out of the car.*

*In 1970, Sylvia Wilkinson was a writer in the category known as 'young Southern Woman Novelist'. While her novels and teaching paid the bills she had a passion for motorsports that led her to write *The Stainless Steel Carrot: An Auto Racing Odyssey*. The book profiled young up-and-coming road racer John Morton as he raced the BRE Datsun 510 in the 1971 and 1972 SCCA Trans-Am 2.5 Challenge. John won*

***the championships and continued on a road-racing career that saw dozens of championship level victories around the country and abroad. The book, well regarded among both racers and general audience readers, has been out of print since 1973. Original copies often sell for over \$100 online and at collectors events. Now, thanks to years of requests from fans, and Sylvia s interest in animals, the book is republished with additional material. -- Amazon.com.***

Die Modellbezeichnung 901" musste noch vor dem Verkaufsstart geändert werden, da Peugeot sich schon fruher die Rechte an samtlichen dreistelligen

Mit dem 911 wurde die Tradition bei Porsche, alle Fahrzeuge unter der internen Entwicklungsnummer zu vermarkten, fortgesetzt. Porsche 911 S (Urmodell)Der 911 stellte gegenüber dem Modell 356 einen grossen Entwicklungsfortschritt dar. Dies gilt für die gesamte Fahrzeugkonstruktion und im Besonderen für den Motor. Vor der Serieneinführung im November 1964 wurden 13 Prototypen des neuen Modells hergestellt. Der Wagen war grosser und auch innen geräumiger als der 356. Die Fensterflächen waren grosser und ergaben eine bessere Rundumsicht, die zur höheren Verkehrssicherheit beitrug. Der Radstand wurde vergrössert und ermöglichte ein für die 1960er Jahre komfortableres Reisen als mit dem Vorgänger. Ebenso wuchs der Kofferraum an, der sich beim Porsche 911 vorne befindet. Es heisst, dass Ferdinand Alexander Porsche für den Entwurf der Karosser

**usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with “motor” referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.**

How were the tropical Americas formed? This ambitious volume draws on extensive, multidisciplinary research to develop new views of the geological formation of the isthmus linking North and South America and of the major environmental changes that reshaped the Neotropics to create its present-day marine and terrestrial ecosystems. Recent discoveries show that dramatic changes in climate and ocean circulation can occur very quickly, and that ecological communities respond just as rapidly. Abrupt changes in the composition of fossil assemblages, formerly dismissed as artifacts of a poor fossil record, now are seen as accurate records of swift changes in the composition of ocean communities. The twenty-four contributors use current work

*in paleontology, geology, oceanography, anthropology, ecology, and evolution to paint this challenging portrait of rapid environmental and evolutionary change. Their conclusions argue for a revision of existing interpretations of the fossil record and the processes—including invading Eurasian peoples—that have produced it.*

One of New Zealand's greatest rally drivers and a hill-climbing superstar tells his inspiring story for the very first time. Rod Millen was a hero of New Zealand rallying in the 1970s. Having won several championships he quickly established himself as New Zealand's number one driver. But thereafter Millen went on to do what very few Kiwis have achieved, finding podium success in American motorsport. He won the North American Race and Rally Championship in 1979, 1980 and 1981, then in 1989 Millen

achieved perhaps his greatest feat, winning the Pikes Peak International Hill Climb, America's second oldest motor-racing event. Writing his name into history, he went on to win the race more times than any driver. The hill-climb is often referred to as 'Millen's Mountain'. Rod Millen is also a highly successful businessman. As a continuation of his off-road driving interests, he founded Millenworks in California in 1980, specializing in cutting-edge light tactical vehicles, armored and off-road vehicles and subsystems for the US military and theme parks. Millen has recently returned to New Zealand, building a 140-acre, ocean-front estate, Hahei with a racetrack as a driveway, modeled on his favourite climb corners around the world. He's also established Leadfoot Festival, a unique weekend held every two years at the estate, bringing together a mix of classic cars, vintage motorcycles and motorsport legends, inspired by the famous British Goodwood Festival of Speed. Aside from rallying, Rod is well known for other forms racing such as super touring, drifting and extreme off-road races like the Baja 1000 (often considered the most dangerous in the world) and Transsyberia rally (which he won in 2007). Rod also won the Race to the Sky hill-climb in New Zealand in 2002 and posted the fastest time at the 2002 Goodwood Festival of Speed in England - and he still has the record up his own front driveway. Cutting Edge is Rod's story, in his own words, of a life lived pushing the boundaries, of record-breaking off-road driving, working at the forefront of motorsport technology, and of creating the ultimate petrol-head heaven, right in his own backyard. **Petunia belongs to the family of the Solanaceae and as such is closely related to important crop**

species like tomato, potato, eggplant, pepper and tobacco. With around 35 species described it is one of the smaller genera and among those there are two groups of species that make up the majority of them: the purple flowered *P.integrifolia* group and the white flowered *P.axillaris* group. It is assumed that interspecific hybrids between members of these two groups have laid the foundation for the huge variation in cultivars as selected from the 1830's onwards. *Petunia* thus has been a commercially important ornamental since the early days of horticulture. Despite that, *Petunia* was in use as a research model only parsimoniously until the late fifties of the last century. By then seed companies started to fund academic research, initially with the main aim to develop new color varieties. Besides a moment of glory around 1980 (being elected a promising model system, just prior to the *Arabidopsis* boom), *Petunia* has long been a system in the shadow. Up to the early eighties no more than five groups developed classical and biochemical genetics, almost exclusively on flower color genes. Then from the early eighties onward, interest has slowly been growing and nowadays some 20-25 academic groups around the world are using *Petunia* as their main model system for a variety of research purposes, while a number of smaller and larger companies are developing further new varieties. At present the system is gaining credibility for a number of

reasons, a very important one being that it is now generally realized that only comparative biology will reveal the real roots of evolutionary development of processes like pollination syndromes, floral development, scent emission, seed survival strategies and the like. As a system to work with, *Petunia* combines advantages from several other model species: it is easy to grow, sets abundant seeds, while self- and cross pollination is easy; its lifecycle is four months from seed to seed; plants can be grown very densely, in 1 cm<sup>2</sup> plugs and can be rescued easily upon flowering, which makes even huge selection plots easy to handle. Its flowers (and indeed leaves) are relatively large and thus obtaining biochemical samples is no problem. Moreover, transformation and regeneration from leaf disc or protoplast are long established and easy-to-perform procedures. On top of this easiness in culture, *Petunia* harbors an endogenous, very active transposable element system, which is being used to great advantage in both forward and reverse genetics screens. The virtues of *Petunia* as a model system have only partly been highlighted. In a first monograph, edited by K. Sink and published in 1984, the emphasis was mainly on taxonomy, morphology, classical and biochemical genetics, cytogenetics, physiology and a number of topical subjects. At that time, little molecular data was available. Taking into account that that first monograph will be offered

**electronically as a supplement in this upcoming edition, we would like to put the overall emphasis for the second edition on molecular developments and on comparative issues. To this end we propose the underneath set up, where chapters will be brief and topical. Each chapter will present the historical setting of its subject, the comparison with other systems (if available) and the unique progress as made in Petunia. We expect that the second edition of the Petunia monograph will draw a broad readership both in academia and industry and hope that it will contribute to a further expansion in research on this wonderful Solanaceae.**

**Die Strafverteidigerin Laura Lattimer wurde Opfer einer Autobombe. Die Staranwältin hatte sich kürzlich geweigert, Luke Orr, den Sohn des Gangsterbosses Matthew Orr, zu verteidigen, der nach einer Drogenrauschnacht neben einer toten Prostituierten aufgewacht war. Alles wies darauf hin, dass Luke sie erwürgt hatte. Der Junge, der sich angeblich an nichts erinnern konnte, wurde zu zehn Jahren Haft verurteilt. Sein Vater war davon überzeugt, dass Laura Lattimer ein wesentlich mildereres Urteil für ihn erwirkt hätte. Deshalb war Orr begreiflicherweise ziemlich sauer auf sie. Wir vom FBI waren nicht die Einzigen, die sich fragten, ob er sie dafür bestraft hatte, dass sie Lukes Verteidigung abgelehnt hatte.**

**of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War.**

**Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.**

**Horsepower War shatters nostalgic myths about musclecars and provides historical perspective on today's SUV craze. It proves efficiency and pollution regulation didn't kill the musclecar and that current regulation, which picks winners by favoring SUVs is the real threat. Harless has mined auto literature from the 1960s to the present to reveal granular detail on specific models, while at the same time providing broad perspective on the tectonic shifts in domestic auto making. He approaches political issues as**

**an auto enthusiast, but instead of being an apologist for industry, he offers principles that embrace market rationality, and enhance the long-term sustainability of cars through rational transportation and energy policy. Harless re-discovers the principles of "conspicuous waste" and "conspicuous consumption"--phrases coined by economist Thorstein Veblen, author of Theory of the Leisure Class--to unmask the unacknowledged assumptions of both U.S. consumers and automakers.**
