Academic libraries have continually looked for technological solutions to low circulation statistics, under-usage by students and faculty, and what is perceived as a crisis in relevance, seeing themselves in competition with Google and Wikipedia. Academic libraries, however, are as relevant as they have been historically, as their primary functions within their university missions have not changed, but merely evolved. Going beyond the Gate Count argues that the problem is not relevance, but marketing and articulation. This book offers theoretical reasoning and practical advice to directors on how to better market the function of the library within and beyond the home institution. The aim of this text is to help directors, and ultimately, their librarians and staff get students and faculty back into the library, as a result of better articulation of the library's importance. The first chapter explores the promotion of academic libraries and their function as educational systems. The next two chapters focus on the importance of the role social media and virtual presence in the academic library, and engaging and encouraging students to use the library through a variety of methods, such as visually oriented special collections. Remaining chapters discuss collaboration and collegiality, formalized

Chapters are organised with references to the core publications, and self-assessment questions help students prioritise those topics they need to revise. The book contains sample exam questions, advice on how to dissect questions and scenarios, and exam answers that are thoroughly explained to aid the learning process.

Issues and Trends in Interdisciplinary Behavior and Social Science contains papers presented at the 6th International Congress on Interdisciplinary Behavior and Social Science 2017 (ICIBSoS 2017), held 16—17 December 2017 in Yogyakarta, Indonesia. The contributions cover every discipline in all fields of social science, and discuss many current trends and issues being faced by 21st century society especially in Southeast Asia. Topics include literature, family culture studies, behavior studies, psychology and human development,

religion and values, religious coping, social issues such as urban poverty and juvenile crisis, driving behavior, well-being of women, career women, career performance, job stress, happiness, social adjustment, quality of life among patients, the cosmetics business, etc. The issues are discussed using scientific quantitative or qualitative methods from different academic viewpoints. Knowledge is a fundamental driver of increased productivity and global competition. Information and communication technologies provide a foundation for building up and applying knowledge in private and public sectors. Countries with information infrastructures that are well developed and that use innovative information technology applications, have advantages for sustained economic growth and social development. Developing countries face opportunity costs when delaying greater access to and use of information infrastructures and technologies. As these information and communication technologies are the centre of World Bank Strategic Directions Framework priorities, increasing the climate for investment and sustainable growth at the same time as empowering and investing in poor people. Implementing a strategy to support information and communication technologies development in client countries is high on the World Bank Group agenda.

A timely intervention as higher education in India begins to pay equal importance to Quality, alongside Access and Equity. Indian higher education is the third largest in the world. It is undergoing unprecedented expansion and reforms. Yet, no Indian university figures among the World's Top 100! The problem lies primarily with the quality of higher education. This book serves as a quality management guide for the heads of colleges and universities, focusing on issues, techniques and improvement at the institutional level. In building up a sound framework, it effectively combines generic methods and techniques with specific mechanisms of quality assurance for in-campus activities such as curriculum planning, teaching learning processes, human resource management, infrastructure management and information and communication technologies. The author's expertise as a management scientist, trainer of heads of higher education institutes and experience of institution building gives the book an extra edge.

· Highlights key elements of financial statements · Uses worked examples throughout A unique practitioner's insight into key aspects of corporate finance and treasury management. Focuses on the evaluation of investment decisions, by highlighting the key elements of financial statements and the ratios therein and their relevance to the financial analyst in the valuation of companies. This book uses worked examples to show just how financial statements and ratios can be interpreted, and different valuation methods can be employed, to assess the company's strategic position within its industry and evaluate its business and marketing plans to produce accurate financial forecasting. It also examines the main sources of finance available to companies and the impact of the type of finance raised on the valuation of investment.

Provides an internationally grounded and critical review of grassroots sustainability enterprises, focusing on the processes that lead to their formation, the governing context that shapes their evolution, the benefits

they create and the challenges that they face in different contexts. Seminar paper from the year 2008 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,0, University of Applied Sciences Berlin, language: English, abstract: Marketing offers numerous valuable tools to analyze a company's current situation. Though, most of them have the weakness of providing only a very isolated view that is not suitable for a long-term entrepreneurial decision. The SWOT analysis, however, pursues an integrated approach including key company and environmental variables. The objective is the confrontation of the company's internal strengths and its weaknesses as well as company-external business opportunities and risks in order to generate possible strategic options. The SWOT analysis particularly supports a combined and integrated approach of the current company situation enabling well-balanced and comprehensive decisions. One main benefit is thus the reduction of complexity through the integrated approach, leaving the key factors and strategies as analytical residue. In practice, the SWOT method is a well established tool to analyze business units in larger companies and smaller start-ups in particular during their launch. The SWOT analysis though reveals limited possibilities when analyzing all business units of large companies. For this task other,

more holistic, approaches as the share-holder-value concept or the portfolio analysis are appropriate. However, this large field of tools will not be treated in this assignment. The SWOT analysis is though, despite its disadvantages, one of the most important instruments for the internal analysis of a company's situation that - in every case - delivers a pretty comprehensive and resilient foundation for further entrepreneurial decisions and strategic planning.

Applied Operational Excellence for the Oil, Gas, and Process Industries offers a straightforward practical guide for oil and gas companies to understand the comparisons and contrasts between various types of safety management processes, including the standardized structure and ongoing extended benefits that operational excellence can bring to an oil and gas company. The goal of achieving operational excellence is to reduce costs, improve productivity, and enhance efficiency—in other words, operational excellence contributes to the bottom line. Following along with pre-built success in the process industries, many companies in the oil and gas industry appear to use a subset form of operational excellence, yet many are unsure or unaware of all the safety system components that will truly benefit the company holistically, and current literature is only applicable to the process and manufacturing industries. Packed with clear objectives and tools, structure guidelines specific to oil and gas, and guidance for how to imbed your existing safety program under the operational excellence umbrella known as "One-Step Merger," this book will help you establish an overall safety culture vision and challenge your organization to achieve higher levels of safety management and overall company value. This book aims to meet the needs of education and training in modern techniques of innovation and entrepreneurship, and focuses on the detailed presentation of successful business practices. As today's global economic landscape is changing rapidly, the ability of businesses to introduce new products and services to the market faster than their competitors is perhaps their most distinct competitive advantage. This becomes obvious by the significant market share that the most innovative companies gain while increasing profitability. Extensive research in this field has demonstrated that companies that are constantly innovating normally double their profits compared to others. Moreover, establishing successful practices and policies of

innovation management, through which ideas evolve from conception through evaluation to implementation and commercialization, become the basis for economic growth at the firm, industry, national, regional, and global levels. Taking Greece as an example, this volume identifies systemic weaknesses in development of new products, risk capital, patenting, broadband penetration, lifelong training, investment in research on the part of firms, high-tech exports, and employment in medium-high-technology manufacturing that place the country at the bottom of the European Union in economic performance and threaten its potential to achieve sustainable growth. To address these weaknesses in Greece and similar countries around the world, the authors present a comprehensive overview of the principles of innovation and entrepreneurship, with particular respect to their relationships to knowledge, learning, and creativity. Drawing from a strong theoretical foundation, and illustrated through in-depth case studies and examples from both private and public sectors, the authors present a framework for innovation management that integrates research, education, practical application, and policy. Specific topics include technology transfer, intellectual property rights management, the practice of knowledge management intellectual capital investment, business incubators, and Cooperation Research and Development Agreements (CRADAs) .

Excellence in Business Management

Seminar paper from the year 2014 in the subject Sport - Sport Economics, Sport Management, grade: 1,3, Fairleigh Dickinson University, Metropolitan Campus, language: English, abstract: The following paper deals with the issue of diversity in the German football club Borussia Dortmund. First of all, the paper provides a general overview about the organizational structure of Borussia Dortmund, which is important for a full understanding of the aspects of diversity in the further course. The main part of this paper is a SWOT analysis. This analysis describes and discusses the strengths, weaknesses, opportunities and threats about diversity. Finally, the result of the analysis shows that the association has a good public image in case of diversity, but in reality there is a lot to do for making the club a real rule model in diversity.

This book presents 190 full papers from the Medical Informatics Europe (MIE 2018) conference, held in Gothenburg, Sweden, in April 2018. The MIE conferences aim to enable close interaction and networking between an international audience of academics, health professionals, patients and industry partners. The title of this year's conference is: Building Continents of Knowledge in Oceans of Data – The Future of Co-Created eHealth, and contributions cover a broad range of topics related to the digitalization of healthcare, citizen participation, data science, and changing health systems, addressed from the perspectives of citizens, patients and their families, healthcare professionals, service providers, developers and policy makers. The second part of the title in particular has attracted a large number of papers describing strategies to create, evaluate, adjust or deliver tools and services for improvements in healthcare organizations or to enable citizens to respond to the challenges of dealing with health systems. Papers are grouped under the headings: standards and interoperability, implementation and evaluation, knowledge management, decision support, modeling and analytics, health informatics education and learning systems, and patient-centered services. Attention is also given to development for sustainable use, educational strategies and workforce development, and the book will be of interest to both developers and practitioners of healthcare services.
