We had our first conversation about cognition, metacognition, and reading in September of 1976. Our particular concern was with reading and learning to read, and what, if anything, meta cognition might have to do with it all. We didn't really know much about metacognition then, of course, but then most other people were in the same predicament. Some people had been working with interesting approaches and results on metalanguage and reading, among them J. Downing, L. Ehri, L. Gleitman, I. Mattingly, and E. Ryan, and it also was about that time that people were becoming aware of E. Markman's first studies of comprehension monitoring. Other than that perhaps the most influential item around was the perhaps already "classic" monograph by Kruetzer, Leonard, and Flavell on what children know about their own memory. Also in the air at that time were things like A. Brown's notions about "knowing, knowing about know ing, and knowing how to know," D. Meichenbaum's ideas about cognitive behavior modification, and the work by A. Brown and S. Smiley on the awareness of important units in text. Even though these developments were cited as new and innovative, it was not the case that psychologists had never before been of questions. They certainly interested in, or concerned with metacognitive sorts had, as clearly evidenced by the notion of "metaplans", in Miller, Galanter, and Pribram's Plans and the Structure of Behavior.

To maintain their own health and the health of their families and communities, consumers rely heavily on the health information that is available to them. This information is at the core of the partnerships that patients and their families forge with today's complex modern health systems. This information may be provided in a variety of forms ranging from a discussion between a patient and a health care provider to a health promotion advertisement, a consent form, or one of many other forms of health communication common in our society. Yet millions of Americans cannot understand or act upon this information. To address this problem, the field of health literacy brings together research and practice from diverse fields including education, health services, and social and cultural sciences, and the many organizations whose actions can improve or impede health literacy. Health Literacy: Prescription to End Confusion examines the body of knowledge that applies to the field of health literacy, and recommends actions to promote a health literate society. By examining the extent of limited health literacy and the ways to improve it, we can improve the health of individuals and populations.

Packed with practical tools, this book provides K-6 educators with a research-based framework for accelerating the reading and writing growth of underperforming students. This text presents a uniquely practical approach to the topic of Assessment in Special Education. The authors organize the material into a "real-world story," by having each part and chapter of the book reflect the linear chronology of the assessment process used in schools. Unlike other books, this book is organized chronologically to present the overall process in a "straight line" - a practical and useful pedagogy in itself for the novice teacher. The text provides the practical tools necessary for a new teacher to understand the process of assessment in schools and then learn how to put it all together. It provides future special educators comprehensive coverage of the latest tests and evaluation procedures for all areas of exceptionality - for every age group - for students with mild, moderate and severe disabilities.

(This book) will help educators who are involved in the process of redefining their roles and responsibilities as special educators or classroom teachers to meet the needs of all students in their schools.... (The) "inclusive schooling" is introduced and examined with respect to the many variables that contribute to the quality of education in a school.... (The) student diversity, the different needs of students in the classroom, and sound assessment practices to identify student needs are discussed. (The book also discusses) in-depth "how-to" information on instructional and behavioral strategies (for example, cooperative teaching, cooperative learning, social skills). -Pref.
