Materials processing engineering is currently considered to be an interdisciplinary engineering field. Learning and training in materials processing must therefore be accompanied by diverse sets of workshops and practical laboratory experiments. In general, the equipment which is required to be available in these laboratories or workshops is very expensive and can become obsolete within a few years. On the other hand, the continual evolution of materials inevitably drives change. However,

edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do--with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of

culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What

Universities tend to be judged by the test scores of their incoming students and not on what students actually learn once they attend these institutions. While shared tests and surveys have been developed, most schools refuse to publish the results. Instead, they allow such publications as U.S. News & World Report to define educational quality. In order to raise their status in these rankings, institutions pour money into new facilities and extracurricular activities while underfunding their educational programs. In Why Public Higher Education Should Be Free, Robert Samuels argues that many institutions of higher education squander funds and mislead the public about such things as average class size, faculty-to-

student ratios, number of faculty with PhDs, and other indicators of educational quality. Parents and students seem to have little knowledge of how colleges and universities have been restructured over the past thirty years. Samuels shows how research universities have begun to function as giant investment banks or hedge funds that spend money on athletics and administration while increasing tuition costs and actually lowering the quality of undergraduate education. In order to fight higher costs and lower quality, Samuels suggests, universities must reallocate these misused funds and concentrate on their core mission of instruction and related research. Throughout the book, Samuels argues that the future of our economy and

democracy rests on our ability to train students to be thoughtful participants in the production and analysis of knowledge. If leading universities serve only to grant credentials and prestige, our society will suffer irrevocable harm. Presenting the problem of how universities make and spend money, Samuels provides solutions to make these important institutions less expensive and more vital. By using current resources in a more effective manner, we could even, he contends, make all public higher education free.

Writing Centers at the Center of Change looks at how eleven centers, internationally, adapted to change at their institutions, during a decade when their very success has become a

valued commodity in a larger struggle for resources on many campuses. Bringing together both US and international perspectives, this volume offers solutions for adapting to change in the world of writing centers, ranging from the logistical to the pedagogical, and even to the existential. Each author discusses the origins, appropriate responses, and partners to seek when change comes from within a school or outside it. Chapters document new programs being formed under changing circumstances, and suggest ways to navigate professional or pedagogical changes that may undermine the hard work of more than four decades of writing-center professionals. The book's audience includes writing

center and learning-commons administrators, university librarians, deans, department chairs affiliated with writing centers. It will also be useful for graduate students in composition, rhetoric, and academic writing.
