The new and improved IAR 2 is the definitive design safety standard of the ammonia refrigeration industry - IAR 2 has undergone extensive revision since the 2008 (with Addendum B) edition was published on December 3, 2012. A major focus of changes made to this edition has been incorporating topics traditionally addressed in other codes and standards so that IAR 2 can eventually serve as a single, comprehensive standard covering safe design of closed-circuit ammonia refrigeration systems.

In order to successfully produce food products with maximum quality, each stage of processing must be well-designed. Unit Operations in Food Engineering systematically presents the basic information necessary to design food processes and the equipment needed to carry them out. It covers the most common food engineering unit operations in detail, including guidance for carrying out specific design calculations. Initial chapters present transport phenomena basics for momentum, mass, and energy transfer in different unit operations. Later chapters present detailed unit operation descriptions based on fluid transport and heat and mass transfer. Every chapter concludes with a series of solved problems as examples of

The effects of time and temperature on the postharvest quality of fruits and vegetables are visually depicted in the Color Atlas of Postharvest Quality of Fruits and Vegetables. Through hundreds of vibrant color photographs, this unique resource illustrates how the appearance (e.g., color, shape, defects and injuries) of fruits and vegetables changes throughout their postharvest life and how storage temperature greatly contributes to critical

quality changes. The book's extensive coverage describes 37 different fruits and vegetables from different groups that were stored at five specific temperatures and photographed daily after specified elapsed periods of time. Individual fruits and vegetables from the following groups are covered: subtropical and tropical fruits pome and stone fruits soft fruits and berries cucurbitaceae solanaceous and other fruit vegetables legumes and brassicas stem, leaf and other vegetable and alliums Information is provided about each individual fruit/vegetable such as

characteristics, quality criteria and composition; recommendations for storage, transport and retail; and effects of temperature on the visual and compositional quality of each individual fruit or vegetable, associated with photos of the appearance at particular times and temperatures. This visual documentation shows how important is to handle fruits and vegetables at the right temperature and what happens if the recommendations are not followed. Also shown is the importance of the initial harvest quality of the fruit/vegetable and the

expected shelf life as a function of quality at harvest, storage temperature and storage time. The Color Atlas of Postharvest Quality of Fruits and Vegetables will appeal to a diverse group of food industry professionals in the areas of processing, distribution, retail, quality control, packaging, temperature control (refrigerated facilities or equipment) and marketing as a reference tool and to establish marketing priority criteria. Academic and scientific professionals in the area of postharvest physiology and technology, food science and

The Exergy Method of Thermal Plant Analysis aims to discuss the history, related concepts, applications, and development of the Exergy Method - analysis technique that uses the Second Law of Thermodynamics as the basis of evaluation of thermodynamic loss. The book, after an introduction to thermodynamics and its related concepts, covers concepts related to exergy,

Paradoxically, solar air-

significantly to the
alleviation of the problem.
