A Mind-Twisting Tour

Through the Grindhouse

Cinema of Times Square

In 1876, in a mountainous

region to the west of Lake

Victoria, Africa--what is today

Ruwenzori Mountains National Park in Uganda--the famed explorer Henry Morton Stanley encountered Africans with what he was convinced were light complexions and European features. Stanley's

discovery of this African "white tribe" haunted him and seemed to substantiate the so-called Hamitic Hypothesis: the theory that the descendants of Ham, the son of Noah, had populated Africa and other

remote places, proving that the source and spread of human races around the world could be traced to and explained by a Biblical story. In The Lost White Tribe, Michael Robinson traces the rise and fall of the

Hamitic Hypothesis. In addition to recounting Stanley's "discovery," Robinson shows how it influenced encounters with the Ainu in Japan; Vilhjalmur Stefansson's tribe of "blond Eskimos" in the

Arctic; and the "white Indians" of Panama. As Robinson shows, race theory stemming originally from the Bible only not only guided exploration but archeology, including Charles Mauch's discovery of

the Grand Zimbabwe site in 1872, and literature, such as H. Rider Haggard's King Solomon's Mines, whose publication launched an entire literary subgenre dedicated to white tribes in remote places.

The Hamitic Hypothesis would shape the theories of Carl Jung and guide psychological and anthropological notions of the primitive. The Hypothesis also formed the foundation for the European colonial system,

which was premised on assumptions about racial hierarchy, at whose top were the white races, the purest and oldest of them all. It was a small step from the Hypothesis to theories of Aryan

superiority, which served as the basis of the race laws in Nazi Germany and had horrific and catastrophic consequences. Though racial thinking changed profoundly after World War Two, a version

of Hamitic validation of the "whiter" tribes laid the groundwork for conflict within Africa itself after decolonization, including the Rwandan genocide. Based on painstaking archival research,

the-art research, rather than a series of necessarily more superficial overviews.

Examples presented here derive from studies in 17 countries including Africa, Asia, Europe, and North and

South America. These reports will stimulate future work toward attaining a sustainable balance between the conservation and exploitation of biodiversity. Cakavian dialects, the

westernmost dialects of the South Slavic language area, have long attracted the attention of investigators, largely owing to the complexity of their prosodic systems. These prosodic systems are

interesting not only from a typological point of view, but also contain material of great importance for the study of Slavic historical accentology. The description of a Cakavian dialect in Istria (Croatia)
