How did you become
interested in the
intersection of
alchemy, magic, and
science? Historically,
what do you see as
the relationship

between science and religion or mysticism? In college, I had a wonderful professor who taught a class on these subjects. To kick off the class, he asked us, 'How do you know what you think you know?' I've spent the last quarter century trying to answer that question. Because the world is

a mysterious place and our relationship to it is not always clear, people have often turned to science, faith, and magic for answers. They help people find responses to the questions of, who am I and why am I here? Diana is an appealing heroine, determined, accomplished, and

yet aware of her own weaknesses. In what ways, if any, does Diana reflect your own experience or personality? There are some similarities - Diana is also a historian of science, also interested in the history of alchemy, and shares some of my passions (including television

Really, all the
characters have some
element of me in

enemies. At
Matthew's ancestral

significant exception.
But the real threat to
their future has yet to
be revealed, and

palatial homes and university laboratories, using ancient knowledge and modern science, from the hills of the Auvergne to Venice and beyond, the couple at last learn what the witches discovered so many centuries ago. This is a detailed history of one of the

Online Library The
Book Of Life All
Souls Trilogy

most important and dramatic episodes in modern science, recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature, heredity, and society. Drawing on archives, published sources, and interviews, the author

Online Library The
Book Of Life All
Souls Trilogy

situates work on the genetic code (1953-70) within the history of life science, the rise of communication technosciences (cybernetics, information theory, and computers), the intersection of molecular biology with cryptanalysis and linguistics, and the

social history of
postwar Europe and
the United States.
Kay draws out the
historical specificity in
the process by which
the central biological
problem of DNA-
based protein
synthesis came to be
metaphorically
represented as an
information code and
a writing

technology—and consequently as a “book of life.” This molecular writing and reading is part of the cultural production of the Nuclear Age, its power amplified by the centuries-old theistic resonance of the “book of life” metaphor. Yet, as the author points out, these are just

Online Library The
Book Of Life All
Souls Trilogy

metaphors: analogies,
not ontologies.

Necessary and
productive as they
have been, they have
their epistemological
limitations. Deploying
analyses of language,
cryptology, and
information theory,
the author
persuasively argues
that, technically
speaking, the genetic

Online Library The
Book Of Life All

code is not a code,
DNA is not a
language, and the
genome is not an
information system
(objections voiced by
experts as early as
the 1950s). Thus her
historical
reconstruction and
analyses also serve
as a critique of the
new genomic
biopower. Genomic

Online Library The
Book Of Life All

textuality has become a fact of life, a metaphor literalized, she claims, as human genome projects promise new levels of control over life through the meta-level of information: control of the word (the DNA sequences) and its editing and rewriting. But the author shows how the

Online Library The
Book Of Life All

humbling limits of
these scriptural
metaphors also pose
a challenge to the
textual and material
mastery of the
genomic “book of life.”
