British post-war governments adhered to. Yet is it fair to assume that Britain's relative economic decline could have been prevented if policy makers had not spent so much on defence?

Examining aspects of the political economy and economic impact of British defence expenditure in the period of the first cold war (1945-1955), this book challenges these widespread assumptions, looking in detail at the link between defence spending and economic decline. In contrast to earlier studies, Till Geiger not only analyses the British effort within the framework of Anglo-American relations, but also places it within the wider context of European integration. By reconsidering the previously accepted explanation of the

economic impact of the British defence effort during the immediate post-war period, this book convincingly suggests that British foreign policy-makers retained a large defence budget to offset a sense of increased national vulnerability, brought about by a reduction in Britain's economic strength due to her war effort.

Furthermore, it is shown that although this level of military spending may have slightly hampered post-war recovery, it was not in itself responsible for the decline of the British economy.
