These on-call pediatric nurses and moms answer the questions all new parents have on topics from feedings and routines to common medical questions. Instructional DVD included.

This manual covers everything from what to get for the nursery, to recognizing the seriously ill child, to disciplining with love, and will appeal to both new parents and those buying gifts for new parents. Written in a folksy, warm, simple-to-understand, commonsense manner, this book is chock-full of useful information.

With the same brilliant combination of humor and warmth she brought to bestseller Bird by Bird, Anne Lamott gives us a smart, funny, and comforting chronicle of single motherhood. It's not like she's the only woman to ever have a baby. At thirty-five. On her own. But Anne Lamott makes it all fresh in her now-classic account of how she and her son and numerous friends and neighbors and some strangers survived and thrived in that all important first year. From finding out that her baby is a boy (and getting used to the idea) to finding out that her best friend and greatest supporter Pam will die of cancer

(and not getting used to that idea), with a generous amount of wit and faith (but very little piousness), Lamott narrates the great and small events that make up a woman's life. "Lamott has a conversational style that perfectly conveys her friendly, self-deprecating humor." -- Los Angeles Times Book Review "Lamott is a wonderfully lithe writer Anyone who has ever had a hard time facing a perfectly ordinary day will identify." -- Chicago Tribune

How to Build Your Baby's Brain

A Practical Guide

The Manual for Parenting Your Newborn Baby

Your child's DNA is not destiny; you are at the helm, guiding their course. The truth is, nature and nurture are in a delicate dance—if one goes too fast, the other one falls. Science tells us that early childhood experiences have the capacity to structure and alter the brain. That means you didn't just supply your child's DNA—you're still shaping it. And it's only by wielding this power that your child will activate their full potential. You are truly a gene therapist; manipulating and guiding your child's genetic makeup based on the experiences you create for them. Contrary to what modern parenting trends have told us, parenting is much simpler than we dared to imagine. Great parenting comes down to one mission: to be prepped and present for the windows of your child's development so that you can take full advantage of them and help your child become a smart, successful, self-sufficient adult. It doesn't require formal training or a fancy degree—all it takes is getting involved. Once parents learn how to flip the right gene "switches," they can expand the limits of their child's potential and lay the emotional and intellectual groundwork that allows them to seize opportunities for success fearlessly, naturally, and enthusiastically. With a PhD. in education and a second in psychology, and forty years of experience as an

educator, Dr. Gross combines an understanding of childhood development with practical and realistic tools to teach parents how to best take advantage of their child's developmental windows. How to Build Your Baby's Brain translates the results from scientific studies about expanding consciousness and performance into day-to-day interaction between parents and children.

The MANUAL (A Child Rearing Guide for the New Father)"The Manual" is a quirky, perhaps REDNECK approach to helping the first-time father raise a newborn son or daughter! It outlines the challenges every new father faces including changing diapers, bottle feeding, manners, potty

training and a myriad of issues that he is not likely to consider until it is too late! The first-time father is at a huge disadvantage in dealing with a new baby today! He has never been taught the correct way to hold the baby, or feed the baby, or change the baby, or put the baby to sleep, or dress the baby. First time fathers have a higher incidence of heart attack, stroke, diarrhea, sweaty palms, uncontrollable flatulation, pink eye and more. But The Manual can cure those nasty conditions!! When a first-time father dives into The Manual he will quickly learn there are many potential dangers the HC001 (Human Child #1, or Your 1st Child) faces in the first few years of life, including sunburn, extreme cold, falling objects, fire and more. With the step-by-step guidance of The Manual a new father will learn how to safely navigate these and many other challenges he will face in the first few years of child-rearing. In this publication the author chooses to take a lighthearted, often comical approach to the day to day details of raising a newborn child. These seemingly superficial details can quickly escalate into full scale insanity if a new father is not equipped with the tools provided in this publication. Tools which help him learn how baby food should be fed to a baby. How often and when a baby should nap. How to change a diaper even in the most difficult of environments. How to teach a baby polite behavior, especially in public. Things a first-time father Should Never Do. And things a first-time father Must Do, if for no other reason than to preserve his sanity. Most of the practices outlined in The Manual, while possibly being viewed as "outdated" in today's society, really just apply a basic, common sense approach to raising a child resulting in your child becoming a well-rounded, self-confident adult. In the end, after reading The Manual, you, the first-time father,
