No matter how practised we are at history, it always humbles us. No matter how often we visit the past, it always surprises us. The art of time travel is to maintain critical poise and grace in this dizzy space. In this landmark book, eminent historian and award-winning author Tom Griffiths explores the craft of discipline and imagination that is history. Through portraits of fourteen historians, including Inga Clendinnen, Judith Wright, Geoffrey Blainey and Henry Reynolds, he traces how a body of work is formed out of a life-long dialogue between past evidence and present experience. With meticulous research and glowing prose, he shows how our understanding of the past has evolved, and what this changing history reveals about us. Passionate and elegant, The Art of Time Travel conjures fresh insights into the history of Australia and renews our sense of the historian's craft. 'Griffiths' luminous new work underlines the inarguable point that if we are truly to understand our history, we must get to know those who wrote it. A must-read for anyone interested in Australia's past.' —Tim Flannery 'If the past is a foreign country, Tom Griffiths makes the perfect travelling companion. Erudite but honest. Generous yet discerning. Warm, perceptive and nothing if not elegant. Let him be your eyes and ears on our shared history. Most of all, follow his heart.' —Clare Wright, author, historian and winner of the Stella Prize 'Tom Griffiths has the rare, reconciling capacity to envisage Australian history as a symphony, created by many voices - the discordant as well as the harmonious - that tells an evolving, bracing story of who we are. Essential reading.' —Morag Fraser AM 'Greatly enriches our understanding of Australia past and present … the book teems with fresh insights. Griffiths poses searching questions, which yield illuminating and often exhilarating answers.' —Ken Inglis AO, award-winning author and historian 'A rare feat of imagination and generosity. No other historian has so eloquently and powerfully conveyed history's allure. The Art of Time Travel will remain relevant for decades to come.' —Mark McKenna, award-winning author and historian 'An historian at the height of his powers. This is book is not only a meditation on the past, but a rallying cry for the future, in which Australia's history might be a source of both unflinching self-examination and poetic wonder.' —Brigid Hains, editorial director, Aeon Magazine 'Events happen, but history doesn't write itself. By exploring the intellectual and emotional backstories of fourteen people who have crafted Australian history, Tom Griffiths shows how and why it is done. In the process, he has created a beautiful work of history.' —Julianne Schultz AM FAHA, founding editor of Griffith Review 'Sharp insights, thoughtful judgment, a generous spirit - Griffiths' panorama of Australian historians shows why any similar survey conducted in the future will include his own artful work among the honoured.' —Stephen J. Pyne, Arizona State University 'An enthralling account of the intellectual rediscovery of Australia by fourteen of its most innovative explorers, vividly brought to life by a gifted interpreter. Tom Griffiths' lyrical prose is mesmerizing in its mastery of Australia's conjunctures of land and lineage, history and memory, fact and fable.' —David Lowenthal, University College London 'Suitable for lovers of Australian history, biography and culture, The Art of Time Travel is a graceful and lively work animated by Griffiths' experience and enthusiasm' —Books+Publishing

*Best Books of 2016 BOSTON GLOBE * THE ATLANTIC From the acclaimed bestselling author of The Information and Chaos comes this enthralling history of time travel—a concept that has preoccupied physicists and storytellers over the course of the last century. James Gleick delivers a mind-bending exploration of time travel—from its origins in literature and science to its influence on our understanding of time itself. Gleick vividly explores physics, technology, philosophy, and art as each relates to time travel and tells the story of the concept's cultural evolutions—from H.G. Wells to Doctor Who, from Proust to Woody Allen. He takes a close look at the porous boundary between science fiction and modern physics, and, finally, delves into what it all means in our own moment in time—the world of the instantaneous, with its all-consuming present and vanishing future.*

In recent years numerous films, television series, comic books, graphic novels and video games have featured time travel narratives, with characters jumping backward, forward and laterally through time. No rules govern time travel in these stories. Some characters move by machine, some by magic, others by unexplained means. Sometime travelers can alter the timeline, while others are prevented from causing temporal aberrations. The fluid forms of imagined time travel have fascinated audiences and prompted debate since at least the 19th century. What is behind our fascination with time travel? What does it mean to be out of one's own era? How do different media tell these stories and what does this reveal about the media's relationship to time? This collection of new essays—the first to address time travel across a range of media—answers these questions by locating time travel narratives within their cultural, historical and philosophical contexts. Texts discussed include Doctor Who, The Terminator, The Georgian House, Save the Date, Back to the Future, Inception, Source Code and others.

For the past 20 years causality violations and superluminal motion have been the object of intensive study as physical and geometrical phenomena. This book compiles the results of its author and also reviews other work in the field. In particular, the following popular questions are addressed: Is causality protected by quantum divergence at the relevant Cauchy horizon? How much "exotic matter" would it take to create a time machine or a warp drive? What is the difference between a "discovered" time machine and a created one? Why does a time traveler fail to kill their grandfather? How should we define the speed of gravity and what is its magnitude?

Time travel romance is not the same thing as sci-fi romance, though some stories may be set in an imagined future; it is romantic fiction set in various different eras, usually from around the sixteenth to the eighteenth centuries. A woman may fall asleep in Central Park in the present to wake up in the arms of a Scottish laird in the sixteenth century. The Mammoth Book of Time Travel Romance contains 25 stories of adventure and love; setti
medieval Scotland, sixteenth-century England, the nineteenth-century 'Wild West'. Some stories are set in the present and a few in the future. Stories include an Elizabethan nobleman whisked into the present day, a troubled young woman who lands in the sixteenth century able to break a curse of lost love. Includes stories from: Nina Bangs, Jude Deveraux, Sandra Hill, Linda Howard, Lynn Kurland, Karen Marie Moning, and many more.

Time to Travel: Travel Planner and Vacation Journal

Looking up, Jedidiah could no longer see any stars. Or sky for that matter. It seemed to be very dark all of a sudden! He stood up and bumped his head on something. It was soft. Some type of cloth? What would that be doing out here in the tree? One hand was still on the dark spot on the tree. He reached out with his other hand and found a door latch. A door latch? He pressed the thumb notch and a door opened. Daylight shone on him. He seemed to be in a tiny room, barely big enough for him to stand in. There was a horizontal pole with a bunch of short red jackets hanging on it.

This never-before-seen twist on time travel adventure explores the theme of accepting those who are different--and having the courage to join them. The moment Ambrose Brody steps into a fortune-teller's tent, he is whisked into a quest that spans millennia with his best friend, an enigmatic carnival girl, and an unusual family heirloom that drops them into the middle of the nineteenth century! The year 1852 is a dangerous time for three non-white children, and they must work together to dodge slave-catchers and save ancestors from certain death--all while figuring out how to get back to the future. Fortunately, they have a guide in the helpful hints embedded in an ancient Chinese text called the I-Ching, which they interpret using Morse Code. But how can a three-thousand-year-old book be sending messages into the future through a code developed in the 1830s? Find out in this mind-bending, time-bending adventure!

"I'm going to die a hundred years before I was born..." The handwritten note was in a dusty trunk that sat in a cave untouched for 150 years. What did the words mean? When journalist Ray Burton finds the trunk near the Arizona ghost town of Hollow Rock, his life changes in an instant. Something in the trunk shouldn't be there. This begins a dangerous journey of discovery bordering on the impossible. A discovery that will affect the past, the present, and the future.

A wise, passionate account of the pleasures of traveling solo In our hectic, hyperconnected lives, many people are uncomfortable with the prospect of solitude. Yet a little time to ourselves can be an opportunity to slow down, savor, and try new things, especially when traveling. Through on-the-ground reporting, insights from social science, and recounting the experiences of artists, writers, and innovators who cherished solitude, Stephanie Rosenbloom considers how traveling alone deepens appreciation for everyday beauty, bringing into sharp relief the sights, sounds, and smells that one isn't necessarily attuned to in the presence of company. Walking through four cities--Paris, Florence, Istanbul, and New York--and four seasons, Alone Time gives us permission to pause, to relish the sensual details of the world rather than hurtling through museums and uploading photos to Instagram. In chapters about dining out, visiting museums, and pursuing knowledge, we begin to see how the moments we have to ourselves--on the road or at home--can be used to enrich our lives. Rosenbloom's engaging and elegant prose makes Alone Time as warmly intimate an account as the details of a trip shared by a beloved friend--and will have its many readers eager to set off on their own solo adventures.

If you ever wanted to set up the latest and greatest grandfather paradox—or just wanted to know if the time-bending events in the latest pulp you read could ever happen—then this book is for you.

Time Travel True Stories

There are various arguments for the metaphysical impossibility of time travel. Is it impossible because objects could then be in two places at once? Or is it impossible because some objects could bring about their own existence? In this book, Nikk Effingham contends that no such argument is sound and that time travel is metaphysically possible. His main focus is on the Grandfather Paradox: the position that time travel is impossible because someone could not go back in time and kill their own grandfather before he met their grandmother. In such a case, Effingham argues that the time traveller would have the ability to do the impossible (so they could kill their grandfather) even though those impossibilities will never come about (so they won't kill their grandfather). He then explores the ramifications of this view, discussing issues in probability and decision theory. The book ends by laying out the dangers of time travel and why, even though no time machines currently exist, we should pay extra special care ensuring that nothing, no matter how small or microscopic, ever travels in time.

When Nephele has a terrible freshman year, she does the only logical thing for a math prodigy like herself: she invents a time travel app so she can go back and do it again (and again, and again) in this funny love story, Groundhog Day for the iPhone generation. Fourteen-year-old Nephele used to have friends. Well, she had a friend. That friend made the adjustment to high school easily, leaving Nephele behind in the process. And as Nephele looks ahead, all she can see is three very lonely years. Nephele is also a whip-smart lover of math and science, so she makes a plan. Step one: invent time travel. Step two: go back in time, have a do-over of 9th grade, crack the code on making friends and become beloved and popular. Does it work? Sort of. Nephele does travel through time, but not the way she planned--she's created a time loop, and she's the only one looping. And she keeps looping, for ten years, always alone. Now, facing ninth grade for the tenth time, Nephele knows what to expect. Or so she thinks. She didn't anticipate that her new teacher would be a boy from her long ago ninth grade class, now a grown man; that she would finally make a new friend, after ten years. And, she couldn't have pictured someone like Jazz, with his deep violet eyes, goofy magic tricks and the quietly intense way he sees her. After ten freshman years, she still has a lot more to learn. But now that she's finally figured out how to go back, has she found something worth staying for?

This thought-provoking collection not only takes us into the past and the future, but also explores what might happen if we attempt to manipulate time to our own advantage. These stories show what happen once you start to meddle with time and the paradoxes that might arise. It also raises questions about whether we understand time, and how we perceive it. Once we move outside the present day, can we ever return or do we move into an alternate world? What happens if our meddling with Nature leads to time flowing backwards, or slowing down or stopping all together? Or if we get trapped in a constant loop from which we can never escape. Is the past and future immutable or will we ever be able to escape the inevitable? These are just some of the questions that are raised in these challenging, exciting and sometimes amusing stories by Kage Baker, Simon Clark, Fritz Leiber, Christopher Priest, Kristine Kathryn Rusch, Robert Silverberg, Michael Swanwick, John Varley and many others.

A Princeton astrophysicist explores whether journeying to the past or future is scientifically possible in this "intriguing" volume (Neil deGrasse Tyson). It was H. G. Wells who coined the term "time machine"—but the concept of time travel, both forward and backward, has always provoked fascination and yearning. It has mostly been dismissed as an impossibility in the world of physics; yet theories posited by Einstein, and advanced by scientists including Stephen Hawking and Kip Thorne, suggest that the phenomenon could actually occur. Building on these ideas, J. Richard Gott, a professor who has written on the subject for Scientific American, Time, and other publications, describes how travel to the future is not only possible but has already happened—and contemplates whether travel to the past is also conceivable. This look at the surprising facts behind the science fiction of time travel "deserves the attention of anyone wanting wider intellectual horizons" (Booklist). "Impressively clear language. Practical tips for chrononauts on their options for travel and the contingencies to prepare for make everything sound bizarrely plausible. Gott clearly enjoys his subject and his excitement and humor are contagious; this book is a delight to read." —Publishers Weekly

Using information from official war documents, this volume provides a narrative of the events of the Civil War, specifically in the state of Virginia.

Some say the past cannot be changed. Well, the past hasn't met Charlotte. Forced by her two moms to spend Christmas at her grandmother's dusty old manor house, 10-year-old Charlotte discovers the impossible: an ancient family quilt that travels through time! Now she's trapped in the past with just a needle and thread and a whole lot of questions. The only people who can help are her mother, grandmother and great-grandmother. The problem is that they're 10 years old as well! Will Charlotte make her way back to the present or remain stuck in the past forever? Join Charlotte on this magical, time-travelling, Christmas adventure, where there's more than presents under the tree - there are pasts and futures! Recommended for gift-givers, parents and educators looking for a compelling children's book with engaging illustrations about the importance of tradition, history, and family that any child can connect to. This contemporary story is also a twist on the holiday classic, A Christmas Carol. "A family's stories can have great power... They not only tell us where we've come from but help shape who we will be."

What if you could rewrite the past? Quinn Black is having the worst day ever . . . over and over again. The same car blocking his driveway, the same horrific accident he witnesses, the same cop that keeps preventing him from saving his boss from dying in it, and the same memory of a girl from his past that gets sharper each time. Then he realizes he has the power to travel through time and change the future. With infinite opportunities to alter the past, the possibilities are endless. Could he prevent terrorist attacks? Natural disasters? The deaths of friends? Or even go back in time and say the right thing to the girl who haunts his dreams? Unfortunately, the rules of time travel are more complicated than he imagined, and before long, Quinn is thrust into the greatest race in human history. His actions can either save the world or destroy it. And now the man who could turn back the clock is running out of time.

What do Scientists Say About Time Travel? It's fair to say that most scientists today will tell you that time travel is impossible. Three of today's top physicists - Charles Liu, Brian Green and Michio Kaku - all hold that time travel is, if not impossible, unlikely in the extreme. However, one of the most brilliant minds of our time, physicist Stephen Hawking, disagrees - although only partially. He believes that time travel is theoretically possible, but only into the future. .... But What Do Real People Experience? The opinion of science, however, has never stopped thousands of people around the world from reporting what they firmly believe are actual experiences of spontaneous time travel! Still others insist that time travel is not only possible, but they have already done it as part of top secret government programmes. Claims for time travel range from the highly flaky to the astoundingly believable. They are especially difficult to dismiss when time travel reports come from absolutely ordinary, rock-solid people who have nothing to gain by proclaiming they travelled in time. Many people who report time travel experiences don't necessarily believe it themselves. What happened to them was so strange, so unexpected, yet so real; they simply have no other good explanation for their experience. You will meet a number of such individuals in this book, most of their stories straight out of the headline of local newspapers. No doubt, a story or two will strike the reader as pure balderdash. On the other hand, some of these cases of time travel are tantalizing and unexplainable. They also come with a certain amount of solid evidence, such as stopped clocks, frozen machines and electromagnetic devices acting in inexplicable ways. Physicist and NASA scientist Tom Campbell said that scientific advances always 'come from the fringe.' Thus, even if you consider some of these stories stepping dangerously 'out there' onto that fringy edge, remember that many of yesterday's fringe theories are today's scientific fact. At the very least, it doesn't hurt to approach the idea of time travel with an open mind and a sense of wonder.

Part travel memoir and part philosophical look at why we travel, it is filled with aspirational stories of Kepnes' many adventures. New York Times bestselling author of How to Travel the World on $50 a Day, Matthew Kepnes knows what it feels like to get the travel bug. After meeting some travelers on a trip to Thailand in 2005, he realized that living life meant more than simply meeting society's traditional milestones, such as buying a car, paying a mortgage, and moving up the career ladder. Inspired by them, he set off for a year-long trip around the world before he started his career. He finally came home after ten years. Over 500,000 miles, 1,000 hostels, and 90 different countries later, Matt has compiled his favorite stories, experiences, and insights into this travel manifesto. Filled with the color and perspective that only hindsight and self-reflection can offer, these stories get to the real questions at the heart of wanderlust. Travel questions that transcend the basic "how-to," and plumb the depths of what drives us to travel — and what extended travel around the world can teach us about life, ourselves, and our place in the world. Ten Years a Nomad is for travel junkies, the travel-curious, and anyone interested in what you can learn about the world when you don't have a cable bill for a decade or spend a month not wearing shoes living on the beach in Thailand.

A valuable companion for art and garden lovers touring in Germany, this guide contains more than 90 portraits and illustrations of beautiful and historic gardens. Filled with important facts on the history and significance of these exquisite locations, this volume is essential for tourists, gardening aficionados, and armchair travelers."

Sustainable mobility has become the new imperative for transport policy. There have been a number of policy attempts at sustainable mobility globally, such as the development of more efficient conventional transport technologies, the promotion of efficient and affordable public transport systems and the encouragement of environmental awareness. Such policies have so often been presented as prerequisites for sustainable mobility that they are now taken for granted. But are any of these policies really successful? To what extent do they actually contribute (or fail to contribute) to sustainable mobility? Why do some policies succeed and others fail? Using an interdisciplinary approach which brings together various theories and methodologies, this book tests each of these policies - or hypotheses, as the author sees them - with detailed empirical investigations. It also argues that leisure-time travel should be included in any sustainable mobility policies, as it now accounts for 50 per cent of all annual travel distance in developed countries. The book concludes by suggesting fourteen theses of sustainable mobility for the EU and a new model for future best practice.
