entertainment venue in Detroit. Almost every major sports and entertainment event was played there. The major tenant was the Detroit Red Wings. Most of the major touring ice shows also skated at the Olympia; great entertainers such as Elvis, the Beatles, KISS, Isaac Hayes, Alice Cooper, Lawrence Welk, John Denver, the Lone Ranger, and the Globetrotters stopped by to perform. In Remembering Detroit's Olympia Stadium, the author leads the reader on a fascinating journey,

through the use of over 200 historic photographs, allowing us a glimpse into that building on Grand River and McGraw that was a second home to many. This volume also features the people behind the scenes who made the popcorn, cleaned the ice, sold drinks and food; took your tickets; saw you to your seats. The media, which reported the events on radio, TV, and in the newspapers, and the Red Wing Alumni who have been skating for over 40 years in old timers games rising money for charities, are

Real-time computer systems
are very often subject to
dependability requirements
because of their application
areas. Fly-by-wire airplane
control systems, control of
power plants, industrial
process control systems and
others are required to
continue their function despite
faults. Fault-tolerance and real-
time requirements thus
constitute a kind of natural
combination in process***

control applications.

Systematic fault-tolerance is based on redundancy, which is used to mask failures of individual components. The problem of replica determinism is thereby to ensure that replicated components show consistent behavior in the absence of faults. It might seem trivial that, given an identical sequence of inputs, replicated computer systems will produce consistent outputs. Unfortunately, this is not the case. The problem of replica non-determinism and the presentation of its possible

solutions is the subject of Fault-Tolerant Real-Time Systems: The Problem of Replica Determinism. The field of automotive electronics is an important application area of fault-tolerant real-time systems. Systems like anti-lock braking, engine control, active suspension or vehicle dynamics control have demanding real-time and fault-tolerance requirements. These requirements have to be met even in the presence of very limited resources since cost is extremely important. Because of its interesting properties Fault-Tolerant Real-Time

Systems gives an introduction to the application area of automotive electronics. The requirements of automotive electronics are a topic of discussion in the remainder of this work and are used as a benchmark to evaluate solutions to the problem of replica determinism.

S2Dutch elm disease control practice in 15 communities showed a wide range of time and material required to apply control methods. The median time used for each method was: sanitation survey, 9.8 hours per square mile; symptom survey, 96 hours per thousand elms; systematic fungicide injection, 1.4 hours per elm; and root-graft

education in the United States. A two-volume set that Choice magazine hailed as a most important resource in its November 2006 issue, this revised edition features the most up-to-date statistical data available to guide students in making a smart yet practical decision in choosing the university or college of their dreams. In addition, the set serves as an indispensable reference source for parents, college advisors,
